We have reorganized and expanded the border patrol, one of the most effective branches of the service, for the prevention of illegal entry. We completely motorized the service with radio-call system and provided for the modern supervision in training of that service. We developed a system of education and training for naturalization, which is practical and aims to enable the courts to make proper selection of those who are attached to the principles of the Constitution and so eligible for citizenship. These policies have been continued under Commissioner J. Lawrence Houghteling.

I also appointed a committee of experts, external to the department (Dimock, Hart, and McIntyre) to study the problems of immigration. On the basis of their report a reorganization in the interests of making the service still more effective and of giving to the people in the field a better knowledge of the law and the Court decisions is being set up. A classification survey of positions in the immigration and naturalization field service has been completed in the interests of greater efficiency, following the recommendations of the committee.

The changes made, at times misrepresented by some, were designed to improve the system. They have cleared up irregularities and dishonest situations, and have accomplished many of the reforms badly needed and recommended in the report of President Hoover's Wickersham committee in 1931.

Every person admitted, temporarily or otherwise, to the United States during my administration of the immigration law has been admitted in accordance with the laws as enacted by the Congress of the United States. These admissions for brief periods as temporary visitors have been under proper safeguards. In a number of deportation cases involving no subversive or criminal charges, but which would have meant separation of families and the abandonment of American citizens, I have deferred making effective final deportation orders while legislation giving relief in these cases was pending in Congress. These cases have been reported to the Immigration Committees of Congress which were considering them in connection with private bills, and with proposals for general remedial legislation.

Throughout my administration the immigration law has been enforced energetically, fairly, and humanely under my direction.

I have been in public office for many years. I have a reputation for service to the public and for faithfulness in discharge of public duty, and for placing the public interest above any other, which I am sure you will admit I should and must defend in fairness to those who have placed their confidence in me, as well as to myself. I have tolerated many expressions of opinions adverse to me personally in my administration of this Department, believing that it was not in the interest of the public to raise personal objections to the free expression of opinion, however unfavorable. Some of the expressions led to statements on the floor of the House and to impeachment proceedings. These charges finally culminated in an investigation by the House Committee on the Judiciary, resulting in a finding of lack of any evidence to evade responsibility to enforce the law, or of failing or neglecting or refusing to enforce the law against any alien.

Your statement of today, however, I feel I should not accept without protest. Since it was offered as fact, sir, I believe that it is in the interests of justice not only to me but to the 4,000 men and women of the Immigration Service who have faithfully carried out the law, since they cannot speak for themselves, that this letter be made public.

I know that many things are said in the heat of political controversy which one does not wish to stand by, and I am sure you will understand that I bear you no personal animosity, but wish to correct the record. I realize that these statements were made under a rule of immunity which Members of Congress have, and for that reason I am sure you will be the first to wish to correct anything that is misleading therein.

Yours very sincerely,

FRANCES PERKINS.

Congress Should Not Adjourn

EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Friday, May 31, 1940

RADIO ADDRESS BY HON. HOMER D. ANGELL, OF OREGON

Mr. ANGELL. Mr. Speaker, under leave to extend my remarks, I desire to include a radio address which I delivered over the National Broadcasting Co. network from Washington, D. C., May 30, 1940, entitled "Congress Should Not Adjourn." The address is as follows:

My fellow citizens, although far removed from war-torn Europe, here in the Nation's Capital the very air seems charged with the grim tragedy of war. The dogs of war are unleashed and in their devastating wake the Four Horsemen are riding again over the fair lands of Europe, leaving behind them only death, desolation, and despair. The greatest crisis the world has faced in the memory of men confronts it today. We are living from hour to hour. No one can forecast what the next hour may bring forth. It is a time for clear thinking, sound judgment, and resolute determination to save America. It is no time for war hysteria or propaganda or appeals from self-serving special interests. The Congress should embrace this task with grim resolve to do the job of defending America without being swayed from its course, with a single purpose to keep America at peace and save our democracy.

Fortunately, America is at peace with all the world. With your help, my countrymen, God willing, the Congress will resolutely strive on to keep America at peace. We have no design upon the territory or possessions of any nation. We cannot black-out, however, the caldron of war burning in Europe. We cannot but look to our own defenses and be apprehensive of our own safety and protection against invasion or attack from any quarter. The law of self-preservation compels this course.

The Congress of the United States is deeply aroused. It was clearing its desks for an early adjournment the first weeks in June, when the smoldering flames of war loosed its fury, threatening to encompass the whole of Europe if not the world.

A national election is in the offing. All Members of the House of Representatives and many of the Senate have contests for reelection. Ordinarily the Congress would adjourn in early summer to permit its Members to participate in the elections. In normal times the Congress should adjourn under such circumstances so that partisan politics may not enter or shape legislative action. The peril and portentous implications of the European war, however, have completely changed the entire program.

We here in the Congress must not underestimate the momentous issues that press for solution in this crisis. In our hearts we are fervently praying that this war may not be visited upon America. We want to remain aloof. We want to keep America free. We do not want freedom to perish from the earth. We want to preserve unsullied the fundamental doctrines underlying this great democracy. For over 150 years our forbears have wrought and sacrificed that constitutional democratic government might be vouchsafed to every American. The decisions we make and the action we take here in the Congress in these momentous days may determine the fate of democracy in America and the course our country shall follow in the years that are ahead. Well may we ponder in this fateful hour: What is the duty of the Congress in such an emergency? Should it adjourn pursuant to the usual practice, ignoring that the world is on fire, or should it remain at its post of duty, meeting and solving these momentous issues, until this crisis confronting us shall have passed? No promptings of partisanship, no considerations of personal interest, no exigencies of political welfare should enter into our deliberations in determining this issue. The defense and preservation of our Nation supersedes all else.

There is no room here for partisanship. The political fortunes of any man or any party are unimportant when our Nation's safety is at stake. In this supreme hour of trial in our Nation's life we are neither Republicans nor Democrats, but only Americans. This does not, however, mean the surrender of one jot or tittle of party loyalty or obligation. The success of the American party system of government depends upon party fealty. In it there is no place for coalition. It ill becomes either political party or its leaders in this hour of our Nation's peril to attempt to achieve partisan party success by seeking to acquire or maintain party control through the exigencies of this grave national emergency. Either party seeking through this issue to form "fifth columns" or Trojan horses in the ranks and forces of the other at this critical time deserves defeat, and the condemnation of all loyal Americans. There is no room for Benedict Arnolds here, and no place for parachutes to land.

In considering our course let us remember that the Constitution of the United States lodges in the Congress authority to raise and

support armies, to provide and maintain a navy, to make rules for the Government, and regulation of the land and naval forces, to provide for organizing the Army and disciplining the militia, to levy taxes and to appropriate money and to make all laws which shall be necessary and proper for carrying into execution these powers. In the Congress, and in the Congress alone, is vested the power of legislation with respect to these underlying provisions for our national defense. The Congress cannot sign a blank check to the President, adjourn and go home without shirking its responsibility.

The days of the rubber-stamp Congress are over. The Congress makes the laws, the Executive enforces them. Only in dictatorships and totalitarian states do the legislative bodies surrender their functions to the executive and quit in times of peace. America is not at war. The Congress is determined America shall keep out of war.

To provide for the defense of our Nation and to avoid being entangled in European conflicts, and to remove the operations of American enterprise and American nationals from the scenes of war, so far as possible, the Congress has enacted certain laws. The President, through authority vested in him by the Congress, has established fixed zones in belligerent territory in which American ships and nationals are forbidden to enter. We have given up many of our rights as neutrals to engage in foreign commerce, to use the high seas for our ships engaged in lawful trade, and to permit our citizens freely to go into foreign countries with whom we are at peace. We have voluntarily surrendered these cherished rights, sanctioned by international law, that we may not become embroiled. In times past we have gone to war to preserve them. Through the fierce progress of this modern mechanized war, the theater of conflict is changing from hour to hour. New belligerents are being drawn in. New factors are entering, requiring additional laws; new decisions and immediate action by our own country to meet the emergencies and to keep ourselves from entanglement. Since the invasion of the lowlands in the last few weeks the Congress has passed legislation changing some of our peacetime laws, lodging additional power in the Executive, providing for the increase and equipment of our land, naval, and air forces, and partially establishing a program that will, when completed, strengthen our national defenses in order to repel any assaults upon our country and our possessions.

National defense means more than guarding our frontiers from foreign foes. We must not overlook those who would undermine the foundations of our liberties by boring from within. Let there be no place in America for "fifth columns," Trojan horses, or parachutists. With public safety at stake, it is time to act. We must know who are with us and who are against us. The Congress is now enacting laws to effectively deal with enemies within our borders.

With the threat of total war in Europe, we find that we are woefully deficient in the essentials for national defense. We lack mechanized and motorized Army equipment, guns, munitions, and airplanes, bombing and pursuit planes, heavy tanks, antiaircraft guns, coast defenses, and trained personnel, both for land, sea, and air. Furthermore, we are not only deficient in these facilities so necessary to defend ourselves successfully in modern war, but, more important, we do not have the factories, tools, machinery, and equipment to manufacture them, and we do not have the skilled workmen and technicians to staff the factories when built.

We have been sleeping at the switch. We have fiddled while Europe armed. It is true we have spent billions for national defense in the last 7 years, but an inventory discloses that only a very small percentage of these funds was devoted to the purpose of acquiring mechanized and motorized equipment, munitions, strategic and critical matériel, and aircraft essential for modern warfare.

The Congress cannot overnight enact the necessary legislation to provide adequately for solving these many problems. We cannot appropriate the necessary money, wave a wand, and go home and rest in assurance we have saved America. The machinery of America is geared for peacetime activities. Our laws respecting social security, wages and hours, employment, and industrial enterprise are formulated for peacetime operations. Many of these laws must be modified or suspended to provide this superwar machine without further delay, which is necessary to protect America against the onslaughts of modern mechanized warfare. Only the Congress can provide the changes necessary. In the changes necessary to provide a war economy we must guard jealously the rights and social progress of the common people we have perfected through the years. Any surrender of these hard-earned, protecting, individual rights, in speeding up a defense program, must be conditioned on their recapture when the emergency ends.

It is at once apparent that the Congress should continue in session to provide the essential legislation which will permit this project of national defense to go forward unhampered, with the utmost dispatch and with the greatest efficiency, to the end that it may be consummated at the very earliest moment.

Our first line of defense is a sound fiscal policy. We entered World War No. 1 practically free of debt. The money cost of the World War on June 30, 1934, as shown by the report of the Secretary of the Treasury, was $41,765,000,000. Today we are confronted with a national debt of $45,000,000,000. Our expenditures, not including those made necessary by this emergency for national defense, exceed our income by over $4,000,000,000 for the ensuing fiscal year. We have continued to build up an annual deficit for over 8 years, with no end in sight. We have some 10,000,000 unemployed. The President, in his message to the Congress, made no mention as to what should be done to finance this immense additional war bill which he recommended in the sum of $1,182,000,000 in appropriations and authorizations. The Congress should not adjourn without finding a solution to this financial problem. Additional funds cannot be borrowed unless the debt limitation is raised, which requires an act of Congress. Our immense gold hoard, constituting three-fourths of the monetary gold of the world, in the main is obligated and is not available for this purpose. Our tax revenues are several billions below that required for normal operations. We cannot provide adequate national defense without paying the costs. The Congress must finance the armament program. It is a duty the Congress cannot shirk. This Congress should not throw it into the lap of the incoming Congress. It should remain in session until the job is done and the war crisis over.

DOMESTIC PROBLEMS

In addition to the questions of national defense, to which I have referred, requiring the attention of the Congress at this time, there are many domestic problems which the Seventy-sixth Congress has failed to solve. Among others are the farm problem, unemployment, necessary amendments to the National Labor Relations Act, wage and hour amendments, transportation bill, the Hatch bill, tax measures, old-age security, and various other problems of great import, upon which the welfare and security of our Nation depend. We cannot hope to restore confidence to America; to start the wheels of industry turning again; to provide jobs on private pay rolls for the millions of unemployed; to take care of the 5,000,000 youth of the country who have never, under our present economy, had an opportunity for employment, unless the Congress formulates and enacts legislation to provide solutions for these problems.

It seems imperative that the Congress should not adjourn at this time; it should stay on the job and do the work for which it was elected; the Members should forego any personal considerations and cooperate together to accomplish these results. We should zealously guard against any incident that may plunge this country into war. We must stay out.

In all ages the costs of liberty have been great. Our own, which we now cherish, was purchased by our American forebears with suffering, sacrifice, and life itself. America's march for freedom down the long road from Valley Forge to Flanders Field in 1918 has left a record of heroic endeavor and sacrifice in meeting the price of liberty, unsurpassed in the annals of time. We of this generation, possessors of this priceless legacy of freedom, purchased at such a cost, can do no less than to do our utmost to preserve it at all hazards. We cannot keep back the black scourge of war from our shores unless we, too, pay the price. The huge armaments necessary to maintain our peace will mean heavy sacrifices from us all, which I am sure we all will willingly make without stint. No needed costs can be too great to preserve our freedom and keep America out of war.

Mother's Day Peace Committee

EXTENSION OF REMARKS

OF

HON. JOHN M. COFFEE

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Friday, May 31, 1940

STATEMENT BY MOTHER'S DAY PEACE COMMITTEE

Mr. COFFEE of Washington. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herein a statement presented to me by the Mother's Day Peace Committee of Washington, D. C., which I am having reprinted at the request of the mothers who signed such petition.

MOTHER'S DAY PEACE COMMITTEE,
Washington, D. C., May 10, 1940.

To Our Senators and Representatives in the Seventy-sixth Congress.

DEAR CONGRESSMEN: As Mother's Day, 1940, draws near, we mothers of Washington, D. C., have been thinking of the kind of gifts we would like to have. You have it in your power to give us the greatest gift any mother could want—the assurance that her children may live in peace and security.

American mothers have managed to produce good citizens for their country in spite of having had, for a good many years, to bring their children up in conditions of insecurity and poverty—many of them without sufficient nourishment, clothing, or education.

Today, however, mothers face the possibility of war. We remember the sacrifices which mothers made during the last war—sacrifices made in the name of democracy and a better world—and made in vain. Nevertheless, we hear the same arguments being used to convince us that our country should take sides in the present European conflict. And we say, "No," Messrs. Congressmen. We have not struggled and worked all our lives to make useful men and

women of our children in order to have them killed off in a useless war.

We want our children to remain here, to be able to get a good education, to get jobs, to live in decent homes, to maintain their health, so that they may contribute to the building of a happy, prosperous nation. That is the way we will fight for democracy and a better world.

We ask you to give assurance not only to us, but to the thousands of mothers in your own districts who go to the polls this fall, that neither now nor at any time in the future will you help to involve this country in the European war. Pass no legislation which would allow loans or credits to the belligerents; pass no legislation which would allow any of our sons—whether they be in the Army, the Navy, or the air force—to be sent into war.

Instead, pass legislation which will give them jobs, educational opportunities, better health, and housing, and will protect the civil liberties guaranteed by our Constitution, that they may continue to be a credit to us and to the Nation.

The Challenge of American Citizenship

EXTENSION OF REMARKS

OF

HON. ALBERT J. ENGEL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, May 31, 1940

AN ADDRESS BY DR. HAROLD M. DORR, ASSISTANT PROFESSOR OF POLITICAL SCIENCE OF THE UNIVERSITY OF MICHIGAN

Mr. ENGEL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by Dr. Harold M. Dorr, assistant professor of political science, University of Michigan, at the Oakland County Citizenship Day Celebration, May 19, 1940, entitled "The Challenge of American Citizenship":

I am happy and deeply honored to have been invited to participate in this, our first greeting to our young voters. I am happy that the acceptance of citizen responsibilities must no longer be taken for granted. I am happy that the people of Michigan and Oakland County are among the first to pay the honor which is your due. And I am happy that this acknowledgment comes with marching feet and playing bands—with ritual pomp and ceremony—the outward and visible sign of an inward and spiritual grace. On May 10, 1940, Adolf Hitler, in sending his armed forces against a defenseless land, declared—I quote:

"The hour has come. These actions will determine the fate of the German Nation for a thousand years."

I adopt these words from a creed which I denounce. I adopt them as a challenge—as a battle cry for democracy. For you, too, "the hour has come." Today you repledge your loyalties to the perpetuation of a free people and to the support of a form of government dedicated to the cause of peace.

These ceremonies in recognition of your new status and your acceptance of new responsibilities insures the future of America against the aggression of all "isms." Let us thank God that there yet is, in a war-mad world, a country where we may assemble—free men under a flag dedicated to peace.

America is a rich country. Our fields are fertile, our hills and mountains are well stocked with iron and coal, our people are resourceful. America is beyond doubt the most powerful and the richest nation in the world. Yet, I submit to you that our most priceless possession is our youth—our young men and women, those of you who now dedicate yourselves to the democratic ways of life. Yes; let me warn you. The coal must be mined, the iron must be forged, the fields must be cultivated before the resources can be turned to the use and to the happiness of man.

So it is with you today. You, too, must undergo processing and tempering before you can, to the utmost of your abilities, discharge the responsibilities you now assume. You must become familiar with the political processes and with the forms of government. You must school yourselves in the field of practical politics; you must seek public office and public employment; you must join with others of like mind and discuss problems and policies; you must demonstrate judgment and balance; you must be ever alert to strike at graft and corruption. But above all, you must have faith—faith in the democratic ideal and faith in the American way of life. This, I submit, is the first challenge of American citizenship.

The implications of this challenge are so exacting that it may be well for us to turn for a moment from the general to the particular. You may well ask: What, specifically, are my responsibilities as an American citizen? How can I, as an individual, acquire the necessary training and experience? How may I demonstrate political judgment and social intelligence?

I may enumerate some of these responsibilities under two heads—civic and political.

We do not live in a regimented state. Our political order endows the individual with great freedom in thought and action. Within this area of freedom we have developed social institutions for the purposes of human associations. Best known among these social institutions are the family, the community, the church, and our social clubs and organizations. In this area our associations are entirely voluntary. No obligations are imposed by law. Yet every failure by these voluntary associations—every break-down within our social institutions—invites the intrusion of the law, and to that extent constitutes a threat to our liberties and to the democratic way of life.

Thus, I charge you: Do not neglect your civic responsibilities; become an active partner in the management of the affairs of your family, your church, your club, and your community; join with your friends and act now to insure your community against the dangers of regimentation and the loss of individual freedom.

Your political responsibilities as an active citizen are equally important. Some of these I would enumerate:

1. You must become familiar with local, State, and national problems.
2. You must face issues with courage and conviction.
3. You must affiliate with the party of your choice.
4. You must register and encourage others to register.
5. You must participate in the nomination of candidates.
6. You must vote in all elections—no issue is too trifling, no office too lowly to challenge your attention.
7. You must insist upon reforms which strengthen democracy.
8. You must stand against influences which threaten it.
9. You must support your public institutions.
10. You must insist upon honesty in Government at every level and in every act.
11. You must insist upon value for your tax dollar.
12. You must insist upon honesty and efficiency in public employment.
13. You must protect your public servants against reprisals—political, racial, and religious in character.
14. You must not refuse service in public office, on election boards, or on juries.
15. You must, in your spare time, serve as an errand boy to democracy.

Citizenship is a public trust and a public office. We would not choose to place that trust in incompetent and untrained hands. We charge you, at this time, to increase your competence and to intensify your training.

Training for citizenship is a matter of self-development rather than a process of instruction. For the benefit of those of you who desire to undertake intensive training I would suggest:

1. That you continue your education, read reliable newspapers and magazines, make use of your libraries and your radios, take advantage of extension and adult education courses.
2. Train yourself to think clearly and avoid prejudices.
3. Overcome the fear of your own convictions.
4. Learn to express your ideas and to speak in public.
5. Become active in the affairs of your church, lodge, club, and trade organization.
6. Get acquainted with people with experience and influence.
7. Affiliate with a party.
8. Join youth organizations.
9. Attend school and council meetings.
10. Visit your courts and your public institutions.
11. Attend all meetings of your party caucus.
12. Circulate petitions and debate issues.
13. Round up voters in support of your candidates and propositions.
14. Try your hand at political organizations.
15. Run for public office.

If you as young voters honestly desire to develop your talents and increase your capacities for political leadership, opportunities are not wanting. Democracy is a living, growing thing. It provides its own training school and testing grounds. The selection of leadership is inherent in its processes. Far pastures appear green and youth is impatient. You look to the Halls of Congress, the Supreme Court, and the White House. I charge you to examine the ladders whereby the incumbents of high office have climbed—slowly, painfully, rung by rung. Local government has been described as the cradle of American democracy. I submit to you that the units of local government provide the experiences and the training out of which Senators, judges, and Presidents are born.

The dictators of Europe laugh and sneer at democracy and the democratic processes. Writers and speakers in our own land cry out that democracy is on trial. I would submit to you today that democracy is established. It is not on trial. But those of you who would continue the democratic way of life are on trial. You are about to become the defenders of democracy. The functions of that office are exacting. Achievements and success lie yet ahead.

Thus we honor you today, not because of your accomplishments, but because of your promise and your opportunities. We honor you because you have expressed a desire to accept the responsibilities of active citizenship. We honor you because of our expectations. We shall expect you to govern wisely and to obey the mandates of your Government. We shall expect you to create authority and to respect that authority. We shall expect you to

remain free and to honor freedom. This, I submit, is the second challenge of American citizenship.

I have named youth as our most priceless possession. I would now present our most cherished heritage. We of the older generation now invite you to accept joint responsibility in a trust we in turn shared with our fathers. American democracy rests upon a foundation of civil liberties. These rights, I submit, we hold only in trust to be handed on to the unborn generations of American citizens. Among these are the rights to free speech, a free press, and a free conscience; there is the right to assemble freely and to discuss openly our common problems. I would submit also the right to a free public education and the right to choose freely our public servants. I would name, further, the right of the individual to be free in his person and property from the interferences of an arbitrary or meddling government.

These rights constitute the spirit of American Government. These rights are the property of no one man; they are the exclusive possession of no generation. They assume the vastness of time and the limitlessness of space. We, of our generation, received these rights in trust—and, today we share that trust with you. Your citizenship challenges you to defend and to preserve these rights.

Our final charge to you today—the most striking challenge of your citizenship—is that you in accepting these obligations will so conduct yourselves that we who are passing from the scene may be assured that Lincoln did not speak in vain, "that government of the people, by the people, for the people, shall not perish from the earth." May God bless you and your America.

Farm Security Administration

EXTENSION OF REMARKS
OF
HON. REID F. MURRAY
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Friday, May 31, 1940

Mr. MURRAY. Mr. Speaker, I wish to call your attention and the attention of my colleagues to the following article taken from the column of Mr. Edward Ryan of the May 30th issue of the Washington Post:

SIX HUNDRED AT F. S. A. TO LOSE JOBS IN FUND CUT

About 600 employees of the Farm Security Administration would go out of their jobs under the House-approved relief appropriation for the agency's farm rehabilitation program, officials estimated.

The pay-roll cuts, it was said, would be made in Washington and in the field, but it has not yet been decided how the division would be made between these two groups.

The agency asked the Budget Bureau to approve a $161,000,000 fund for the rehabilitation work, same as the current year. The Bureau cut the estimate to $123,000,000 and the House approved $115,000,000.

Secretary Wallace was reported yesterday to have told the Senate Appropriations Committee, that the impact of war was already hitting hardest the farmers in the lowest-income group which is covered by the F. S. A. rehabilitation program.

Wallace, it was understood, desired the rehabilitation work as a first line of defense for thousands of needy farm families suffering from economic dislocations of the war.

His report to the committee said that farmers who had lost their foothold on the land were becoming hopeless, and fertile ground for social ills which disrupted Europe, and warned that unless they could be helped toward security, their intolerable conditions may prove a threat to democracy.

Here is just one more example of two viewpoints which always seem to be presented at any time a constructive kind of legislation is advanced:

First, you will note how the new dealers try to infer that anyone who votes for a measure which will reduce the number of Federal employees is in the class of the inconsiderate and unholy.

Second, that Mr. Wallace has given the people to understand that the "fifth column" is going to be on the farms of our country unless everyone subscribes to the inefficient, unsound, and unfair program of the Agricultural Department. Mr. Wallace better get the "fifth columnists" out of his own Department, before he starts worrying about them on the farms of this country. I think that it is high time that someone tells Mr. Wallace that the vast majority of the people of this country are becoming aware of the New Deal schemes and that he is not making as much of a political issue out of some of his maneuvers as he thinks he is.

In the first place, if the money which has been appropriated to the Farm Security Administration had been, or would be, used for the rehabilitation of real farmers there would be some sense to it. Instead of doing this the Farm Security Administration first spends millions of dollars in buying up farms for people who have never owned farms before, paying up to $650 an acre for them. The purchaser is not required to make a down payment of a single cent. He gets this money for 40 years at 3 percent interest. At the same time the New Deal has foreclosed 85,000 farms of persons who are already on their farms and are trying to hang onto their homes and their means of making a living.

Mr. Wallace's presence recently at St. Paul indicates that he evidently wants to make a political issue out of this farm foreclosure program. The facts are that the New Deal has had complete control of this situation for 7 years. Mr. Morgenthau went out in 1933 and organized the set-up, and now at the end of the 7 years it seems that they want to shove this over into someone else's lap and blame them for the fact that their whole farm-credit machinery has bogged down. This whole program was a brain child of the Harvard Law and it is just one more of the New Deal chickens that is coming home to roost.

The other fact which is very evident is that, with all this discussion of the social ills, the migration from the Dust Bowl to the Rose Bowl could be easily halted if these millions of dollars that have been appropriated had been used to keep people who were in distress on the farms on which they were living. Instead of such a program the Department of Agriculture has followed one of waste and extravagance and has spent millions of dollars in overhead with nothing to show for their enormous expenditures. These intolerable conditions can very easily be eliminated by simply using the money which is being appropriated for the purposes for which it is appropriated. The time has come when someone should use a little common sense. The so-called Farm Security Administration may be security to a few hand-picked individuals, but up to this time these funds have been used for the further insecurity of the people who are the real farm people and who own and operate their own farms.

This article shows how far Secretary Wallace will go in trying to picture an emergency, which, in fact, is nothing more or less than playing with the misery of the poor. They may bark at the rich but they surely eat off the poor by squandering money which Congress appropriates for the welfare of the poor people of our country.

German Preparedness

EXTENSION OF REMARKS
OF
HON. JOHN Z. ANDERSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, May 31, 1940

Mr. ANDERSON of California. Mr. Speaker, I have heard considerable discussion recently on the subject of the effectiveness of the present German war machine. I am one of those who believe that the Germans started their rearmament program long before Hitler's rise to power. The following article, taken from Economics of the Patent System, by Vaughn, is of particular interest at this time:

About 1920 the War Department made an investigation of patents obtained by German citizens and assigned to Frederick Krupp, of Germany. On May 20, 1921, the War Department authorized the publication of the following:

"The Secretary of War has caused an investigation to be made of the patents and applications for patents recently announced as having been obtained by German citizens and assigned to Frederick

Krupp. The investigation disclosed a rather striking circumstance, in view of the conditions which Germany is supposed to observe as to disarmament and the manufacture of war materials under our treaty obligations.

"Of the 228 patents and applications for patents assigned to Krupps, 26 were found to relate to artillery fire-control devices; 18 to electric-control apparatus; 9 to fuses and projectiles; 6 to gas engines and appurtenances; 17 to guns and their appurtenances; 3 to processes for production of metals; 10 to naval fire-control devices; 3 to projectiles and machines for handling same; 14 to railroad artillery; and the balance to varied uses, most of which might well relate to military use.

"Incident to making this investigation it was noted that a large number of patents and applications for patents had been assigned to numerous other German companies, and a casual examination indicates that a considerable number relate to airplanes and their accessories, chemicals, dyes, radio apparatus, and naval equipment."

The article above goes a long way toward proving that the German nation was obviously engaged in preparing for the present war while other nations throughout the world were attempting to settle their differences peacefully and scrapping their offensive weapons.

The President and the President To Be

EXTENSION OF REMARKS

OF

HON. HAROLD D. COOLEY

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 31, 1940

ADDRESS BY HON. CLAUDE PEPPER, OF FLORIDA

Mr. COOLEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speech of Senator CLAUDE PEPPER at the convention of Young Democrats, Raleigh, N. C., April 29, 1940.

My fellow young Democrats and fellow Americans, as the representative of a State just learning how to be liberal, I am glad to be in the oldest liberal State in the South.

Nine long months ago we young Democrats met in Pittsburgh. That convention was notable because the spirit of North Carolina dominated. For the first time the new liberal forces of youth in this country swept a national convention from start to finish.

We said at that time that the Pittsburgh convention of the young Democrats was of great significance, because it was a mirror of the Democratic convention this July.

We are all sure now that we were right.

When we met on those hot summer evenings many things troubled us in our hearts. We were troubled by the arguments of many honest reactionaries within our own party, who we thought did not appreciate that a sword of Damocles hung over our heads. We were troubled by the sight of men who played the adventurous game of politics for personal power, and made the welfare, even the lives of our fellow citizens, pawns in the game. We were troubled by the intuition, if not the consciousness, that we sat on a powder keg; that our own economic forces were barely stable and yet ran the risk of the tremendous impact of half the world at war at any moment. In this state of affairs we felt the impelling necessity for unity among ourselves—steadfast and earnest unity of purpose—unity of action. We felt that in those serious moments those who held the rank, let alone claimed the name of statesmen, should think first of the interests of the people before they thought of themselves or their class.

We were closer to the truth than even we knew. We thought we could see the sky darkening over Europe. We could not know that we were meeting 3 weeks before the declaration of the second World War.

For 8 months now that war has been fought. By some blessed chance it has not yet broken out in all of its terrible force. But each day brings sadder news of an enlarging and intensified conflict, and each day we know that the task of keeping America at peace grows harder.

Those sentiments which we felt at Pittsburgh are now doubly true. If it were dangerous then to our country's welfare to indulge in petty, personal politics, it is doubly, aye, triply, dangerous now. If it were destructive then to shake the confidence of the people in a leader who was their only hope, now to do so is disastrous. If we were heavy hearted then because of those who were blind and could not see or worse, those who were blind because they wouldn't see, we are doubly sad if there are any such men now to raise their voices and claim the right to lead.

If we were intolerant then of men who jockeyed for the power of the White House, who boasted that they could step into the Presidency and carry on the amazingly skillful and intricate job that the President is doing, we must be doubly intolerant now, when we realize what that job means to youth and to youth's future world.

When we were at Pittsburgh, the conservatives of our party—the men who were telling us to let them save the country and the world by doing nothing for either—these conservatives told us that our country was tired; that we had been going at too fast a pace, that what we needed to do to have national unity was not to work together but to sleep together.

These old prophets of an old order, who claimed to possess all wisdom, told us that we might as well bury the carcass of the New Deal, because the body was dead. They told us that there was nothing else for Government to do; that there were no challenging problems which required assault by the whole Nation. They told us that there was no upheaval in our own economy threatened; that there was no real danger that people would seriously protest against poverty, against undernourishment, against pellagra, against seeing their children die twice as fast as they would if they were better off; against seeing their inheritance of the right to work being perpetually denied them.

These deceived and deceiving prophets of repudiated doctrines were telling us that there wasn't anything to this argument about machines having disordered the old ways of the world, the ways that men knew and understood; that it wasn't so that there were strange new forces, material and mental, loose in the earth; that we were foolish alarmists who talked about trying to put our house in order against a war which might engulf civilization, because, said they, there wasn't going to be any war—at least, there wasn't going to be any war if Roosevelt did not cause it.

These arguments weren't very convincing to us young Democrats at Pittsburgh, because we young Democrats had not been out of personal touch with real people in this country as long as some men have who have spent a lifetime in Washington, where they have lived well and been honored. And because we young Democrats knew that the real alarmists, the real false alarmists, were those who tried to frighten the people of their country by telling them that all was lost if they did not immediately go back again to the days when they lost all or nearly all. We knew that their gloomy prophecies about most other things were no more true about Roosevelt having destroyed business, even big business in America. For we read the newspapers and we read the headlines which told the same story that the financial page of the New York Times yesterday told, under the headline "250 corporations raise profits 50 percent."

We read magazines which tell the same story that the Wall Street Journal told a little bit ago, in saying that the profits of the first thousand representative corporations as compiled by the National City Bank, showed earnings in 1937 of 8 percent on net worth as compared to 6.6 percent in 1927 when enterprise was as free as the eagle, and 9 percent in 1929.

We knew that Roosevelt had been the best friend business, even big business, ever had in the White House, because we knew that the only way that big business can live is for little business to thrive, and Roosevelt was the first President in 20 years upon whose retina little business has been able to register an image.

We Young Democrats at Pittsburgh did not take these doleful prophets of gloom very seriously when they talked about debt ruining our future, because we were just curious enough to look into that dirge of debt a little bit. And when we did we were pretty well satisfied, for we found that our generation owed altogether two and one-quarter billion dollars less than we owed altogether in 1932, and we were realistic enough not to be deceived by thinking that we really owed less if the Federal Government owed less but our cities and districts and counties and States and private corporations owed more.

And when we heard these statesmen singing a song about as cheerful as The Prisoners' Song about balancing the Budget, we Young Democrats were just impertinent enough to ask, "Whose budget are you talking about balancing?"

We are interested in balancing our generation's budget. All that is ahead is our inheritance—it is the estate that posterity has left us, and what we are interested in is the condition of that estate. Have we an honest trustee? Has it been well administered, so that its corpus has been preserved, or has it been neglected while the trustee thought only of his commissions?

We Young Democrats have not been very long out of school, and we still read some of these books that these college professors write, and some of these papers that men who spend their lives in these laboratories write, and we even read some of these magazines that tell us something about the marvels of our age, and we know that things aren't like they used to be. We know that a long time ago, about all a nation needed to get along was wood and wind and water, and then a little later, about our grandfather's and even our father's time, about all they needed was coal and iron and mechanical power, but we know now that the world isn't that simple any longer. We have actually been in chemistry laboratories occasionally, and we know that now it takes all kinds of things from all parts of the world to keep us going—all kinds of materials and all kinds of energies.

And we know that our world now is not as large as the Atlantic seaboard was in Washington's time, or as France was in Napoleon's time.

And we know that peculiar things have happened in what we call our economic life, because we know, for example, that in North Carolina the number of spindles needed to turn out a given quantity

of goods is very much less than a few years ago, and the number of men it takes to turn out a given quantity of goods is very much smaller than were required just a little while ago. So it is easy for us to see that that means that two great pyramids have already grown up in our economic life. One of them is the pyramid of unused money, and the other is the pyramid of unused men. We know that that situation cannot be solved by just doing nothing.

We have seen democracy lost because it just did nothing about that sort of thing. We have seen people trade their liberty for jobs, trade their independence for security, even from dictatorship. We have seen men who dreamed of getting a chance to live under a democracy, who fought to be able to be a part of a democracy, scorn it and think it was a shibboleth because it did not govern when it had a sacred duty to govern.

We do not mean to be disrespectful of our old leaders, but we are not blind and we know they not only did not do anything about these things, but they did not even see these things; or if they saw them, they did not care enough to do very much about them.

But we do know, thank God, about Franklin D. Roosevelt. We do know that he sees these things that we see, and that he has been doing something about them, even against the doleful prophets who speak for the dead.

Franklin D. Roosevelt, we know, has saved our inheritance for us. He did not let our estate, handed down to us by the blood of our forbears, the kind of forbears who shed their blood at Kings Mountain, the kind of forbears who gave us the declaration of Mecklenburg, collapse and fall to pieces. He has lightened our debt. He has conserved our resources when they were being squandered by an irresponsible trustee. He has made us healthier. He has thrown a lot of the rotten apples out of the barrel of our national life, and gently enough, but nevertheless realistically, he has kicked in the pants a lot of fellows who were snooping around trying to steal most of the good apples that were left in the barrel.

And it gives us no little satisfaction to know that he is the one fellow that even dictators don't kick around very much.

Roosevelt suits us Young Democrats, just as he suits the older Democrats like your fine Governor here, who has just issued a statement approving Roosevelt. Roosevelt suits us as he suits the people of America, because he has got what we like. He knows what it is all about. He is a real man. He's got guts, and he's got a heart in him, as we say down here in the South, as big as a mule. He, like George Washington, and Thomas Jefferson, and Theodore Roosevelt, and Woodrow Wilson, is one of these men who came from the upper classes to be the champion of the lower, which, without irreverence, suggests something like the example of the Master.

Most of us, being practical fellows, like Roosevelt because he has made democracy work. He has actually made it feed and clothe and shelter people. He has made it the instrument to better the conditions of all the people. Literally, he has made democracy the agency to achieve all those fine things recited in the preamble of our Constitution, "To form a more perfect Union, to establish justice, to insure domestic tranquillity, to provide for the common defense, to promote the general welfare, and to secure the blessings of liberty to ourselves and our posterity."

We see the other major nations of the world at war and we know that we are at peace.

We see young men in other nations of the world under arms. We follow the pursuits of peace. We see other nations spending their substance in war, while we employ our resources to raise the standards of living of our people. We see liberty gone in most of the rest of the world, while we enjoy it here as a matter of course.

We see freedom of the press, of speech, of worship, of assembly, of thinking gone from other peoples, while we make freedom a footmat for abuse.

We see youth in other parts of the world hopeless, while we here are more hopeful of the future of our country than we have ever been.

Roosevelt is that hope.

At Pittsburgh we demanded a third term for Roosevelt's ideas. Now young Democrats and all Democrats of America and all Americans who love the democratic way demand a third term for Roosevelt.

We will not give up Roosevelt until these new rights—"the right to a job, the right to security in times of private employment and in old age, the right to a decent home, the right to an education, the right to bargain collectively with the boss, the right to enough to eat, the right to adequate pay, the right to sell the products of the farmer's toil at a fair price, the right to security of savings, the right to security of home and family, the right to a fair share of the Nation's resources and to protection against their exploitation"—until these new freedoms, until these new deals to the American people are secure, until they are accepted and in the bedrock of our life.

These new principles are stones in the edifice of a new life for our generation bearing Franklin D. Roosevelt's own craftsman's mark, and we will not give up Roosevelt until they are laid in the mortar of permanence and inviolability.

We know that these new rights have not been given to us. They have been dearly bought with sacrifice, with brave, courageous effort, and with money.

The Chinese Ambassador recently said that China had traded space for time. As Mrs. Roosevelt said, "We have traded money for time." Time for our economic structure to be modified according to modern technological demands. Time for our economy to be adjusted to the mastery of the machine. Time for our people to learn new skills and to make physical and mental adaptations to this strange new world. Time for the democratic process to assimilate the modern method. Time for the world to regain its sanity. Time for the mad dogs of dictator imperialism to be leashed. Time for men to learn the fatherhood of God and the brotherhood of man.

We have invested that money in our faith in humanity, in our hope that man will live to keep his rendezvous with destiny. By it we are saving America. We believe in our hearts we are helping to save God's world.

We see leaders in the old world, we hear would-be leaders in our world telling the people not to trade money for time and what time brings. We see what happened to nations that took the counsel of those leaders and who, like Midas of old, lost all their gold because they were too greedy for more. Our minds and our hearts tell us that the same tragedy would befall those who would follow the modern pied pipers.

Who would have back that money and have war; who would have back that money and have revolution; who would have back that money and have economic chaos, mental and spiritual demoralization?

The people of America know an inspired leader when they see him. They know the difference between a fakir and a President in the White House. They know how to judge men and with a rare intuition they sense men whom they can trust and follow with consummate devotion.

Only Lincoln, a new dealer ahead of his time, led America through a darker hour than has Roosevelt. The people trust him now as they trust no other public man in America. They will follow him now as they will follow no other American. They will unite behind him as they will behind no other leader. He is their rendezvous with destiny, and they are determined to keep him.

It is usual to hear these days a mournful song of confidence. One is not in good standing in the business world, I imagine, unless he frequents the wailing wall at which his comrades wail for "confidence." They have not succeeded in restoring the people's confidence in the leadership of big business because its record does not deserve the people's confidence. But there is a need for confidence. It is the confidence of business that it will have customers. It is the confidence of the people that they will be able to buy. It is the confidence of the people in their leader. It is the confidence of the people in their democracy. It is the confidence of the people in their country.

There are yet dark days ahead—days maybe darker than any we have heretofore seen. We may have to go down to the valley of the shadow of death. The way down may be a long road, and the way up longer still. We will need to grasp a firm hand. We will need to hear a strong voice. We will need a light to follow. I believe in my heart that if the people of America, the masses of America, felt that they had to go through a great ordeal, either in domestic or foreign affairs, they would rather have Franklin D. Roosevelt their leader than any man born of woman who lives and whom they know today. That kind of confidence is what gives us national solidarity—gives us strength for the future.

Those who fear a third term have short memories. They forget that Senator Fess, a scholarly Republican, demanded that Coolidge be drafted while able Senator Pepper (Republican and no kin), of Pennsylvania, said that the third-term objection had become nebulous. That Congressman Snell, Republican leader of the House and permanent chairman of the 1932 and 1936 Republican Conventions, said "everybody wants Coolidge." Even "the greatest Secretary of the Treasury since Alexander Hamilton" hoped Coolidge would consent to run if the convention were deadlocked That rather conservative figure, Herbert Hoover, the rather honorable and respected Chief Justice of the United States, Charles E. Hughes, that rather substantial businessman, Henry Ford, that rather respected businessman, Odgen L. Mills, they were all among the "draft Coolidge for a third term" clan. Secretary Ickes, at the National Editors' dinner a week ago, reminded Glenn Frank, "brain truster" of the Republican National Committee and who now views Roosevelt with alarm, that both of them eloquently supported Theodore Roosevelt for a third term.

Able Senator TAFT, who aspires to follow his father in the White House, must have forgotten that his father wanted Theodore Roosevelt to run for a third term, and himself finally took an only term so as to give Theodore Roosevelt a third term, vicariously or by proxy.

We who have read our history relatively recently learned that George Washington for 8 years was the Commander in Chief of the Armies in our struggling cause. Then he was the moral leader who bridged the gap and between the end of the Revolution and the establishment of the Constitution. And then for 8 years more he was the President of his new country. Thomas Jefferson, too, for many more than 8 years was President, actually or by proxy. Andrew Jackson for more than 8 years was President personally or through Van Buren.

There are some streams which are more than 8 years wide.

There have been three great crises, I would say, in American history: Washington winning our Nation, Lincoln saving our Union, Roosevelt saving our country. What would people have said about Lincoln having a third term if his second term had ended with Appomattox? We here, in the South, you and I, whose grandfathers and grandmothers, or maybe whose fathers and mothers,

went through the crucible of reconstruction, we know that if he could have been spared to do it, Lincoln would have done the job of restoration.

Roosevelt is no candidate for office. There are no more honors in America to heap upon him, no more homage could they give him if he lived forever as President than the people have given him in the dark hours of their trial. But Roosevelt is the people's candidate for 4 more years in the White House—until we can see through the clouds. In this great world crisis they trust Roosevelt to guide us the best way that mortal man can guide us. They know that he knows more about the sad evolution of events that have led to this day than any other man who might take his place. They know that not ambition, but duty, would keep him in the White House if the people called, because he is not a man who shirks duty.

Involved in the choice we make is the essential principle of democracy—the right of the people to choose their own leader; the right of the people to go the new way, the way they want to go in life and in government; the right of the people to plan their own future the democratic way, and particularly the right of young men and women to preserve their inheritance.

Tonight as I look into the faces of the young men and women my mind turns principally to contemplate America's future. To me what I see is America unlimited. It is not a dying America—it is a living America. But what makes it a growing America is not its fast-diminishing resources but the vision and the planning and the courage of its people—its new-minded men and women.

My mind turns back to what you and I would have seen if we had lived in 1860 and had looked at the little country of Sweden, already densely populated, on the other side of the water, and at this great United States of America, sprawling across a continent. The areas beyond the Mississippi, those fertile fields, those rich resources, were not yet touched. Those broad rivers ran on, unchecked by dams and turbines. Their backs were yet unburdened with the loads of trade or travel. Would anyone have said in 1860 that between that day and this, Swedish manufacturing would have grown more rapidly than ours? And yet such is the astonishing fact.

When we look inside of that remarkable country we find that what has made it grow has not been its natural resources but its people, and how they have planned and lived by cooperation.

As Dr. Kreps recently said at the Temporary National Economic Committee, "They have had a 'reserve works' system—a W. P. A., if you like—since 1866, based on a national resources survey made in 1752. They have about the lowest tariff in the world. They initiated a national power system under a water-power administration in 1909 (with scores of municipal and cooperative distributing plants (T. V. A.)). A governmental power network gridirons the whole nation, with rural electrification covering 60 percent of the farms (as opposed to less than 20 percent here). They have had a managed currency since 1920 and frankly scoff at the gold standard. The state is a partner in the largest iron mines in the country—those now of such importance to Germany.

"Tobacco profits are used to finance old-age pensions, which they have had for decades, together with unemployment insurance and other forms of social security. The state owns the trunk-line railways, the telegraph and telephone systems, and most of the forests. They have had the basic elements of the A. A. A. since 1928. Their system of state liquor control compares favorbly with that of any country in the world.

"Their governmental aerotransport company has not had a fatal accident in 12 years. They have had full collective bargaining for decades and since 1909, when Hjalmar Branting came into power (by the way, to settle a general strike which the King refused to stamp out by violence or bloodshed), Sweden has been governed most of the time by its L. O.—Landsorganisetionen—with the slogan 'The same possibilities for living securely within the fatherland for all those who inhabit it.' They have had a consumer cooperative movement that successfully and aggressively attacked and reduced the prices of manufactured goods. In spite of all these obstacles Swedish manufacturing grew faster than that in the United States.

"Those who consider Sweden a special case should look at developments in Germany, Switzerland, the Netherlands, or any other industrialized country, including Great Britain. Even in that tight little island the increase in real wages from 1840 to 1900 was just as rapid as in the United States."

If this little country shall be able to stand off the dictator it shall be through the strength it has developed in three-quarters of a century of intelligent cooperation through government. With the example of what these countries with vision have been able to do with their scant material, is there any American who does not thrill over the prospects of what we might do if we really save America and really make America what our forefathers dreamed.

Ahead of us lies a vista that challenges the scope of imagination—a future that grasps the fancy and sends the blood racing through the veins of a proud and understanding citizenry. The long road is winding toward the top of the mountain. If we but hold our course, husband our resources for the final climb, spend ourselves in our fidelity to our leader and to our cause, there shall soon burst upon our vision the great valley on the other side.

I conclude my remarks with the words uttered by your own senior Senator, Senator JOSIAH W. BAILEY, at the Democratic National Convention at Philadelphia in 1936. True then, and truer now, a tribute in unsurpassed eloquence to the man who is the democratic way for America in the world—these sentiments, the sentiments of North Carolina in 1936, I know are the sentiments of North Carolina now:

"Mr. Chairman, gratefully North Carolina seconds the nomination of the candidate without a rival before this convention, without peer in the public service or the hearts of the American people, their voice and their idol, the President and the President to be.

"We hail him as the political redeemer of the American Republic; the vindicator of the rights of the voiceless millions; the restorer of the national faith, and the national unity in that faith; the preserver of democracy and the free institutions in our land when they were failing throughout the earth; the man who proved himself the man for America in her darkest hour; the man by every test for her millions as they emerge from the pit and the night once again, thanks to his mighty leadership, and proceed to regain the way to their happy destiny.

"We love him for his manifest sympathy with the people he serves and leads; for his inspired statecraft in grappling with problems and overcoming difficulties and perplexities that threatened to engulf our Nation, and we love him for the enemies he has made.

"We greet their challenge with a cheer. We welcome the hour when we may run before him to meet them hand to hand in his behalf, as he has met them day by day for 3 great years.

"We are confident in the triumph of our cause, assured in the power of its righteousness, inspired by his matchless example, and honored by the knowledge that we have the privilege of sharing with him the highest patriotism and the noblest service in doing what in our power lies to reelect as President, Franklin Roosevelt."

The Kings Canyon National Park

EXTENSION OF REMARKS

OF

HON. BERTRAND W. GEARHART

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 31, 1940

ARTICLE FROM THE NEW YORK TIMES OF MARCH 24, 1940

Mr. GEARHART. Mr. Speaker, the enactment of my bill for the creation of the Kings Canyon National Park has created widespread favorable comment throughout the Nation, some of which I have heretofore extended and other of which I will hereafter offer for inclusion in the CONGRESSIONAL RECORD.

Among the interesting articles which have appeared is one which was contained in the March 24th issue of the New York Times, an article which the editors of that great newspaper entitled, "New Park for West."

Because of the accuracy of the factual statements and its excellence in descriptive matter, I ask the consent of the membership of this body that this article be spread upon the pages of the CONGRESSIONAL RECORD of this day's proceeding. I am sure that it will be of historical value in the days to come.

The unanimous consent of the membership being indicated, the article referred to follows:

[From the New York Times of March 24, 1940]

NEW PARK FOR WEST—KINGS CANYON, NEAR YOSEMITE AND SEQUOIA IN CALIFORNIA, RUGGED AND SPECTACULAR

When President Roosevelt recently signed the bill H. R. 3794, outdoor-living and outdoor-loving Californians found themselves in possession of a new national park, comprising 454,000 acres of the rugged Kings River area in the Sierra Nevada Mountains, and including the present General Grant National Park.

The region included in the new park consists of towering mountains, breath-taking canyons, sapphire-blue lakes and flowered alpine meadows in the gorges of the Kings River. The area lies along the crest of the Sierra Nevada between Sequoia National Park and Yosemite National Park. It is part of the country described by John Muir as the "shining mountains" because of the sparkle of the rocks, the brilliance of the perpetual snows, the shininess of the glaciers, and the brightness of the sun.

Muir, California's beloved naturalist, first proposed in 1891 that this part of the "snowy sawtooth Sierra" be made a national park. Since then the National Park Service, the Sierra Club, other organizations and individuals in California have waged a hard battle for the new park.

PEAKS, CANYONS, LAKES

From the tourist standpoint, this "Alps of America" offers an immense new national playground. The glaciated mountain scenery of the Kings River gorges is unsurpassed. In the park are 40 peaks more than 11,000 feet high and 10 more than 14,000 feet high. Just south is Mount Whitney, 14,468 feet, the highest point

in the United States. The canyons are spangled with nearly 600 lakes.

No purchase land is necessary in the creation of this new national park. It will be carved from the Sierra and the Sequoia National Forests. The administration will merely change from the United States Forest Service to the National Park Service. Boundaries of the new park will be drawn so as to give full protection to the irrigation needs of the San Joaquin ranchers. Future dam sites at Cedar Grove, Tehipite, and Pine Flat will be placed outside the park boundary.

A GREAT WILDERNESS

Plans are to make the new region America's greatest wilderness park. During the past century the wilderness found in California by Jedediah Smith, Kit Carson, General Fremont, and other early explorers has been rapidly vanishing so that today only 600,000 acres of undeveloped mountain area lie more than 10 miles from a road. Dougherty Meadows, within the new park, are said to be the farthest spot in California from a highway.

With this in mind, the National Park Service is planning to make the park a paradise for the hiker and the horseman.

To most Californians the Kings River is a single stream flowing placidly through the fields and farms of the San Joaquin Valley Actually it is formed by the junction of three splendid tributaries—the North, Middle, and South Forks—which have their source among the enormous snow fields and glaciers of the high Sierra.

The park encompasses the watersheds of the South and Middle Forks of the Kings River. Its dominant features are two enormous canyons, similar geologically to those of Yosemite Valley, yet distinctive and unspoiled. These spectacular gorges cut deeply through the body of the Sierra and lead back to the crest of the range through great glacier-sculptured uplands.

A HIGH WALL OF STONE

The summit peaks combine to form a 12,000- to 14,000-foot wall of fantastic stone bearing the white splendor of perpetual snow. To the west of this escarpment lie the expansive alpine shoulders of the range—intricate ridges and divides, hanging valleys, spacious timber-line plateaus. This whole western area is jeweled with myriads of lakes, streams, meadows, and gardens of alpine flowers. To the east is a sudden, breath-taking drop of more than 8,000 feet to the arid Owens Valley and the interminable sea of desert ranges stretching toward the Nevada border.

The Kings River gorges have been compared with the canyons of Yosemite Valley. Both were carved from granite and limestone eons ago by great glaciers. But the gorges of the Kings River possess a personality of their own. Having fewer rock features such as Yosemite's El Capitan and Half Dome, nevertheless the canyon walls contain a magnificent assemblage of carvings even higher and more rugged than those of Yosemite. Outstanding among the rock temples is Tehipite Dome in the Middle Fork—towering above the canyon 3,700 feet, or 100 feet higher than El Capitan.

NEW ROAD TO PARK

A new highway constructed by the State and dedicated last summer provides an entrance way to the park, but only to the South Fork Canyon of the Kings River. The road enters the park but does not cut through it. Only a few square miles in the park will be touched by road. It is the park primeval for those who love their mountains unmotorized, and many vacationists who prefer "roughing it" on hiking and pack trips are expected to explore its miles of unspoiled wilderness.

The road begins at General Grant National Park. It winds around mountain peaks, runs through a 60-year-old forest which has grown up during the last century, plunges into the South Fork through rugged mountain slopes and emerges alongside the rocky, foaming Kings River. Towering on one side are huge limestone mountains, rising thousands of feet in reds, greens, and yellows. Across the gorge on the other side are tree-crowned pinnacles and spires which create the effect of a great silvery cloud hovering on the precipice. The canyon finally widens out into a great bowl at Cedar Grove.

In spite of the luxurious Awahanee Hotel in Yosemite and the new $1,250,000 Timberline Lodge recently built by the United States Forest Service on the slopes of Mount Hood, the National Park Service has pledged that accommodations in the new park will be kept as simple as possible. An unpretentious inn or lodge will be constructed suitable for the person of modest means.

Good hiking and bridle trails will be built to all parts of the new park. Thus the great primitive region may be protected for all time to come and saved for those who would visit it on foot or on horseback. It has been planned to make living in the new park as inexpensive as at a Y. M. C. A. or Boy Scout camp.

Says Frank A. Kittredge, regional director of the National Park Service: "We believe that there is a tremendous future ahead for a wilderness park, such as is in the Kings Canyon country. There is everything there which the hiker could hope to find.

"We feel that there are only comparatively few people who can afford to hire a pack outfit and only a few people who know enough about pack animals to pack in on their own responsibility. There are, however, thousands upon thousands of young men and women, as well as those of mature age, who would like nothing better than to be able to hike leisurely through the park, carrying only their sleeping bags and food for 2 or 3 days. The construction of proper trails and shelters in case of storms and the placement of foodstuffs will be one of the greatest steps forward in the use and enjoyment of this and other great inspirational national parks."

As in other national parks, hunting will not be permitted. Figures show, however, that only 5 percent of all deer bagged in the Sierra and Sequoi National Forests last year came from the area included within the park boundary.

A Bill To Create Division of Aviation Education

EXTENSION OF REMARKS

OF

HON. WILLIAM H. LARRABEE

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 31, 1940

STATEMENT EXPLAINING PURPOSES OF PROPOSED ACT

Mr. LARRABEE. Mr. Speaker, I have introduced the bill, H. R. 9974, and wish to include in the RECORD the following explanation of the bill:

The proposed act would establish within the Office of Education of the United States a division of aviation education to conduct research, make studies and investigations with respect to means and methods of promoting and carrying on aviation education, to furnish information and assistance to organizations and schools seeking to promote education, and to cooperate with educational institutions in providing plans and materials for instruction in aeronautics and all its branches.

The division of aviation education would also be empowered to assemble, compile, and maintain for reference and proper distribution records and statistical and other data pertaining to aviation education, opportunities in the field of aviation, and availability of training in aviaton, prepare and distribute material for extension courses, and undertake other functions incident to the promotion of aviation education.

The proposed act would create a committee of 15 members, representing all branches and all functions of aviation and aeronautics, to confer and advise with the director of the division of aviation education on plans and methods of promoting aviation education.

This committee would be made up of representatives of the Aeronautical Chamber of Commerce, Air Transport Association, private flying, soaring, the United States Army Air Corps, the United States Navy Bureau of Aeronautics, the United States Weather Bureau, the National Advisory Committee for Aeronautics, Civil Aeronautics Authority, National Aeronautic Association, Institute of Aeronautical Sciences, the Airline Pilots Association, and model aircraft work.

The bill proposes an appropriation of only $35,000 for the organization and operation of this office for the fiscal year of 1941.

Events of the past few months, at home and abroad, have proven beyond doubt the necessity for a comprehensive and coordinated program of aviation education in the United States.

Progress in aviation in the United States has been remarkable, when we consider that its progress has been without assistance or inspiration of any coordinating agency and that the only limited aid or encouragement to the field of aviation has been that extended by the Civil Aeronautics Authority, the Army, and the Navy.

With other sections of the world producing pilots, and trained youth in various branches of aviation, in much larger numbers than have been produced in the United States, it is apparent that some action, sponsored, planned, and directed by a responsible agency, should be undertaken to encourage, aid, and facilitate aviation education in the United States.

Since it naturally becomes an educational function, then it follows that it should be so treated.

The bill that I have introduced in the House seeks to stimulate and rationalize aviation education by bringing together representatives of all branches of aviation voluntarily, under the supervision of the Office of Education of the United States, to plan and stimulate a broad program of training.

This bill makes no effort to force upon any one any program of aviation education which they do not wish. Neither does this bill propose to force aviation education into any schools, public or private. We merely propose that the committee created and given official status by the proposed act, and representing all branches of aviation insofar as is possible, shall prepare and propose an extensive program which any organization, school, or individual interested in any way in aviation education or development might participate under the official aid and guidance of the Commissioner of Education.

The bill seeks further to make available to any organization, school, or individual such data and information as may have been assembled and prepared from studies and research conducted by the Division of Education, on approval of the Commissioner of Education, as may be helpful in furthering and advancing aviation education throughout the Nation.

My bill proposes to make this information, or so much of it as the Commissioner may authorize, available to private schools, as well as public schools, for the reason that these private schools have been carrying the load of aviation education unassisted since the teaching of aviation as a science or study was first undertaken, and, for the further reason that the private schools may be expected in the future to continue to share a very important part of the aviation-education program.

For the sake of public benefit and public safety it appears that such information and data as may result from the research and studies of the Division of Aviation Education should be made available, insofar as that is possible, to private schools and responsible private individuals, as well as to public schools and other agencies of the Government.

Plan for Economic Rule

EXTENSION OF REMARKS

OF

HON. W. STERLING COLE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, May 31, 1940

ARTICLE BY DOROTHY THOMPSON

Mr. COLE of New York. Mr. Speaker, there appeared in the press this morning an article by Dorothy Thompson, noted publicist and commentator, which deserves thoughtful and sober study by every Member of this body.

THE WORLD GERMANICA—PLAN FOR ECONOMIC RULE

(By Dorothy Thompson)

The Germans have a clear plan of what they intend to do in case of victory. I believe that I know the essential details of that plan. I have heard it from a sufficient number of important Germans and persons closely in touch with important Germans to credit its authenticity, the more so as previous information regarding military strategy which emanated from the same sources has been completely confirmed by the events.

Germany's plan is to make a customs union of Europe, with complete financial and economic control centered in Berlin. This will create at once the largest free-trade area and the largest planned economy in the world. In western Europe alone—Russia is another chapter—there will be an economic unity of 400,000,000 persons, skilled, civilized, white men, with a high standard of living. To these will be added the resources of the British, French, Dutch, and Belgian Empires. These will be pooled, in the name of Europa Germanica.

The Germans count upon political power following economic power, and not vice versa. Territorial changes do not concern them, because there will be no France or England, except as language groups. Little immediate concern is felt regarding political organizations. The Belgian King will remain on his throne, and may be rewarded with the throne of Holland. Mussolini will remain on his balcony and Victor Emanuel on his throne; other governments will be set up, but no nation will have the control of its own financial or economic system or of its customs.

The nazification of all countries will be accomplished by economic pressure. In all countries contacts have been established long ago with sympathetic businessmen and industrialists, and those who have been openly hostile will be punished by boycott. The German occupation armies will fraternize with the Allied soldiers and persuade them that the great social revolution has occurred.

As far as the United States is concerned, the planners of the World Germanica laugh off the idea of any armed invasion. They say that it will be completely unnecessary to take military action against the United States in order to force it to play ball with this system. They point out that there will be no other foreign market for the raw materials and agricultural products of the United States, since these can hardly be sold in the Western Hemisphere.

Here, as in every other country, they have established relations with numerous industries and commercial organizations, to whom they will offer advantages in cooperation with Germany. Certain conditions will have to be met. No orders will be taken from or given to firms headed by personalities unfavorably regarded by the Nazis. No advertising contracts will be placed with newspapers directed by or publishing the work of pro-Ally or anti-Nazi editors or writers.

(This is exactly the way in which they have already swung into line the press of southeastern Europe.)

The immense gold reserve of the United States will be, obviously, worthless. The international currency will be a managed currency, the German mark, and all external trade will be based upon barter. This new world-wide complex will want raw materials, and will pay for them in manufactured goods. The United States will become an economic colony, for its economic independence will be lost. There will be immense demands upon the Southern and Middle Western States for cotton, wheat, etc., and upon the mineral wealth of this country, which they will take at high prices measured in terms of manufactured articles. The German planners predict a stampede of the South to collaborate with this system. This stampede will be fostered and directed by their agents.

South America will be conquered by business agents, not by guns. The plantation owners will be asked by the Germans whether they want to sell their meat, cotton, and raw materials to Germany in exchange for machinery, industrial material, automobiles, etc., or whether they want to be boycotted. Inasmuch as the chief market of South America is Europe—and obviously the United States cannot take these products, which compete with our own—they count on the complete break-down of the Western Hemisphere policy. "America," they say, "will be reduced to attempting to conquer all the arts of economic persuasion at our command. We shall be the peacemakers, and they the war makers." The economic penetration has already been established in all South American countries and in Mexico, and will be accompanied by political ultimatums and propaganda activities.

Germany will be the industrial and financial dynamo at the center of all this, with special privileges. Reference is made to the American Civil War, to the conquest of the industrial North over the agricultural South. France will be kept to agriculture and the manufacture of quality goods. She can still make dresses and women's handbags.

London is to cease to be a financial center, but will be the chief commercial center, under Nazi domination. When it is possible to find pro-Nazis of French, British, or other nationality, they will be put into power in their own countries. Otherwise, German governors will be put in. In any case, all political activities will be quietly watched by the Gestapo.

To accomplish all this it is necessary to complete a total war against Britain and France. Original plans were to drive through to the Channel ports and offer a separate peace to France. The progress of the German Armies, however, now leads the German generals to the belief that they can deal a knockout blow to both London and Paris.

The former is to be accomplished by the invasion of Britain at a time when her very meager army is decimated. The Nazis intend to blast a channel or channels across the Channel—corridors across the corridor--probably from Antwerp or Calais. They will sweep mines from a fairly narrow channel with speedboats and submarines and heavily mine both sides of it, transporting troops under the cross-channel fire of heavy guns of a size and range not yet used in this war.

Nazi troops now concentrated in Norway will be used for the invasion, simultaneously, of Scotland. Invasion will be by giant submarines, boats, and planes.

Assault troops will be landed at the same time at half a dozen points along the coast. The Nazis have speedboats which can carry 200 men and can cross several times a night.

They consider London the easiest city in the world to invade once the troops have landed. The roads approaching it are undefended, many major highways and numerous small roads converge upon it and are connected with cross roads through which

several units can approach at the same time and retain communication with one another.

All operations will be accompanied by terrific air attacks.

The British Isles will be held as hostage for the empire and the fleet. It is contemplated that the fleet will be scuttled or will go to Canada. "But no new stand can be made in Egypt or in Canada or elsewhere in the empire or among the commonwealths because we shall have the British Isles at our mercy, with the entire population. We will destroy the ports and cut them off from food. They can either sign on our terms or be systematically ausgerotted and starved."

The Nazis believe in the system of hostages. They now admit that they tried it first with the Jews to see whether world Jewry would buy out its coreligionists. They thus demonstrated that the humanitarian impulses of the world are one of their own most useful weapons.

Russia will not be invaded. "We have no interest in the political system. Stalin will work with us. We are only interested in the organization of the Russian transport system in increasing the production of the oil wells and exploiting minerals. Russia is full of our engineers and more of them will be welcome. The Russian system is all right, but it needs Nazi discipline and German technical skill to exploit it. Slavs cannot organize."

They do not believe that the proletarian workers in any country will seriously oppose them—even if they could. They argue that the tendency in all democracies demonstrates that workers only want to eat and have work, and care nothing for national matters or for individual liberty. What remnants are left of the pre-Hitlerian epoch myths will be terrorized out of the workers by the Gestapo. "And," they add, "there is nothing that capitalists will not do, if profitable. Democracies have taught their people, workers or corporation chiefs, to believe only in money.

And, finally, only the master race, the Germans, will be allowed to bear arms. If, however, the United States wants to concur, all armaments can be radically reduced.

The Pinnacle of Lunacy

EXTENSION OF REMARKS

OF

HON. GEORGE HOLDEN TINKHAM

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, May 31, 1940

TELEGRAM FROM ELLERY SEDGWICK, ESQUIRE, AND REPLY OF CONGRESSMAN GEORGE HOLDEN TINKHAM

Mr. TINKHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following telegrams:

BEVERLY, MASS., *May 30, 1940.*

Hon. GEORGE HOLDEN TINKHAM:

The foreign policies you have confidently and no doubt conscientiously supported for 20 years have now brought us to the brink of disaster. Will you now push us over? In time the public always learns the truth, and just when the victory of sane domestic policies seems certain at the polls the conviction that under isolationists' leadership world democracy is in deadly peril stands fatally in the path of Republican victory.

ELLERY SEDGWICK.

MAY 30, 1940.

Mr. ELLERY SEDGWICK,

14 Walnut Street, Boston, Mass.:

Yours. We have not been neutral but in recent years constantly intervening in the political affairs of other nations, with certain disaster ahead for ourselves. What you term isolationism I term noninterventionism. No country can be half in war and half out of war. It is patently disloyal to the American people to involve them in war, and that is what the present policies are doing. War means the setting up of a dictatorship, the abolition of free economy, the imposition of censorship and espionage; in short, the establishment of a totalitarian government here to fight totalitarian governments elsewhere. This would be the pinnacle of lunacy for a country which believes in liberty and freedom and can maintain its neutrality and preserve its integrity. Our highest duty is to keep democracy alive here. I do not see that we have a duty to endeavor with fire and sword to maintain our form of government everywhere in the world. It is a fight lost before begun.

GEORGE HOLDEN TINKHAM.

The United States and the War

EXTENSION OF REMARKS

OF

HON. KEY PITTMAN

OF NEVADA

IN THE SENATE OF THE UNITED STATES

Monday, June 3 (legislative day of Tuesday, May 28), 1940

ADDRESS BY HON. KEY PITTMAN, OF NEVADA, AT THE COMMENCEMENT EXERCISES OF THE MONTANA SCHOOL OF MINES

Mr. PITTMAN. Mr. President, I ask unanimous consent to place in the Appendix of the CONGRESSIONAL RECORD an address made by me at the commencement exercises at the Montana School of Mines at Butte, Mont., on Friday evening, May 31, 1940, upon the subject of the United States and the War.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Governor Ayers, President Thomson, members of the faculty, members of the graduating class, and students, may I express my deep appreciation of the honor you have conferred upon me and the genuine pleasure that I experience in making the commencement address to this justly celebrated mining college. I would much prefer to speak to you who live in this great mining center on matters of interest and encouragement with regard to mining. Metals are the most essential substances on earth. The evolution of civilization has followed the discovery, mining, and beneficiation of metals. Wars are won today with metals. We of the intermountain country with its vast mineral resources will contribute our part to the defense of our country. It has been deemed advisable, however, that as chairman of the Committee on Foreign Relations of the United States Senate, I should address you with regard to the United States and the European war. I approach this subject cautiously as no sympathizer with the cause of Great Britain and France will prophesy its end or but conjecture as to its possible serious effect upon the United States and the rest of the world.

During the last 3 weeks we have witnessed the "blitzkrieg". We had heard this word repeated many times, and in general we understood its definition. And yet may I say that not even the President, who has watched the course of events most carefully during 7 years and is peculiarly qualified to analyze its course, could have imagined the rapid kaleidoscope of death and destruction that has taken place in 3 weeks. Without notice, on the early morning of May 10, while the peaceful people of the Netherlands were wrapped in sleep, Hitler's vast fleet of airplanes bore down upon the air fields, the homes, and the public buildings of Holland. Parachute soldiers by the thousands jumped from airplanes, landed at strategic points, and opened up their streams of death and destruction with machine guns. This was a new and strange movement in war, and no one was prepared to meet it. As daylight came amid death and destruction, terrified people saw great lines of steel monsters moving at incredible speed, belching shot and shell and fire. Tanks were used during the World War, but these incredible instruments of death were new. In a brief time the lives of 100,000 people of the Netherlands were destroyed, and countless men, women, and children wounded and wracked to the point of death. Tanks and armored cars followed by a horde of infantry swept across Holland laying waste as they went. Holland's gallant army of 500,000 men was dispersed and their efforts were made futile.

Over into Belgium flew the flock of planes, attacking the gallant Belgian Army from above with bombs and machine guns, while the tanks with their instruments of destruction shot down and crushed everything in their way. Another great army similarly equipped went through Luxemburg without resistance, the "fifth column" having prepared the way. Into France pushed and pounded these monsters of steel and destruction, while the airplanes rained death upon the mobilizing French Army. And these forces proceeded with but little opposition until they were within 60 miles of Paris. And then this great German mechanized army whirled to the right, driving everything before it, and occupied vital portions of the French coast across the channel from England.

The Netherlands had an excellent army, though small in comparison with that of the Germans. The Belgian forces were well organized, and felt safe for a time at least behind their fortifications. The French Army, of which there is no superior in the world, had made long preparations for defense against a German attack upon its northern border. It is not surprising, however, that these

great armies should have been pushed back. A fanatical genius for 7 long years has lived but for the day he could conquer Great Britain and France and the intervening neutral countries. He has organized a government in which he is supreme ruler. He has subordinated the individual to the state. He has enthused his subjects with the spirit of revenge and the promise of domination of the world. He ruthlessly removed every obstacle to his ambitions and his plans. Christianity was banned, and churches were disorganized. Social, cultural, and political societies were destroyed. Labor organizations were dissolved, and the laborer was compelled to work on such terms as Hitler might dictate. And then his system of rigid training of his officers and his soldiers was instituted and maintained under absolute discipline. He called into the service of the Government every inventor, ever scientist, and every genius. All were working to one end—the creation of an invincible instrument of destruction and conquest. These inventors and scientists created powerful new instruments of war.

It seems strange that the governments of Europe did not become aware of the extraordinary preparations for conquest that Hitler was making and take steps to defend their countries. The fact remains, however, that they did not provide adequate protection to defend against Hitler's overpowering attack. The French generals in 1935, when Hitler marched into the Rhineland, urged that he be driven out. It is reported, and with some authority, that the British Government objected on the grounds that they were not prepared for war. That was in 1935. From that time on Hitler steadily advanced in his plans of conquest. Austria, Czechoslovakia, Poland, Norway, Denmark, Holland, and Belgium were subjugated.

Again, strange as it may seem, Chamberlain, Prime Minister of Great Britain, while charging that Hitler had deceived him at the time of the surrender of the Sudetenland, apparently after that still had trust in his protestations. There were some of us who denounced Hitler 14 months ago and urged that it was possible for him either individually or in cooperation with other totalitarian powers to dominate Europe and Asia, and that it was our duty to prepare to defend against that which might come after. It is true that it was only a supposition and there was little reason for those in the United States to give credence to such assertions. But we were far away from the conspiracies that Hitler was preparing against the world. Great Britain and France were very close. The same excuse does not exist as to them.

We may dream as to what might have been, but it is our duty today to face the facts as they affect the welfare of the United States today. The conquest of Hitler was once far away; it is nearer now. We have witnessed the tremendous effect of airplanes. We must realize that it is possible for Hitler to bomb and destroy our cities, munitions plants, and factories. It is hardly practicable, but it is possible. Of course, he could not conquer this country with airships alone. And, if such an attempt were made to bomb and destroy, we realize now that we have no adequate defense against such an attack. We know now that the only adequate defense against an attack by airships is by airships. Our air fleet is insignificant. We realize now that we have only sufficient antiaircraft guns to defend the city of New York. Our Army consists of only 75,000 men that can be fully equipped at this time. Ten millions of men equipped are in the standing armies of Europe. Without regard to what the result of this war may be, Hitler today dominates not only Germany, but Denmark, Holland, Poland, Belgium, and Czechoslovakia with their millions of people, their natural resources, their shipyards, munition works, and manufacturing plants. These people, their resources, and their manufacturing plants are absolutely at Hitler's command. These people will be required to work in operating those shipyards, munition plants, and factories under such conditions as Hitler may command. And how about the vast manpower and resources of the outlying possessions of the countries he has conquered? They are his also to do with as he pleases. Must we not realize the tremendous power that Hitler possesses, irrespective of whether he conquers Great Britain and France or whether a peace is negotiated?

The only thing that could relieve the United States from the present threat is the defeat of Hitler. At present that does not appear probable. As I said before, Hitler with his accumulated power would be a threat to the United States even if peace were made today, but how much more desperate it would be if Hitler should conquer Great Britain and France and acquire possession of their navies. We would then have a fleet on the Atlantic far superior to our whole fleet, and we'd have a fleet on the Pacific almost equal to the power of our fleet. Let us say that such an occurrence is hardly probable, but still we must admit that it is possible. It is the duty of statesmen in a government representing the people not to take chances on possibilities. I doubt if Hitler even in alliance with other governments would attempt to attack the United States directly in the near future. That is not necessary. Every action of his government has indicated that Hitler longs for the great natural resources of South America. His subjects have gained great power in that continent already, and his "fifth column" has long been active. We would have to determine when his control in southern South America endangered portions of South America nearer to the Panama Canal and our own shores. In self-defense and by reason of our admiration and friendship for the states of South and Central America, and Mexico, we are compelled to aid them against any conquests either from the outside or from the inside. This will be a tremendous burden upon the people of the United States.

And yet if we spent all we have, it would be a cheap price to pay for our Constitution, our Bill of Rights, our independence, and our liberty. We will never live under a dictator's heel, deprived of the right to participate in our Government, deprived of the right of the freedom of speech, the freedom of the press, and our right to worship our God as we see fit.

The situation may be complicated and made more serious by the entry of Italy into the war on the side of Hitler. The King of Italy and his subjects are Christian people who despise the atheism of Hitler. They are opposed to Italy's entering this war. The Pope knows Hitler. He knows he is an atheist. He knows that he has been the most bitter enemy of Christianity in all the world. He knows his unlimited ambition and that he would not hesitate to impose his will upon Italy. Mussolini is looking out for the physical welfare of Italy. Italy was deceived in the last war by the Allies. Mussolini knows that Italy needs colonies possessed of raw resources. These things Italy desperately needs. And, therefore, he may lead Italy into war. That will not increase our hazard very much. I do not believe he has any desire to follow Hitler around the world in his mad career of conquest. Italy would not relish such an undertaking and besides Italy requires her fleet to protect Italy and her possessions on the Mediterranean. Italy will never join in an attack upon the United States either directly or indirectly.

This confused situation in the world is hard to understand even by those who have followed and studied its course. There is a serious situation now facing the United States and our people must trust in their President and their representatives. There is no division in sentiment as to the necessary defense preparations among the loyal citizens of our country. The representatives of our citizens in the House of Representatives and in the Senate realize, as well as does the President, the dangerous situation in which we suddenly find ourselves and the necessity for speedy preparations for defense. This is perfectly illustrated by the fact that every Member of the United States Senate voted for the Army and Navy Appropriations Acts. And remember that these appropriations are the largest ever made by a Congress of the United States in peacetime. Again our people realize now that preparation cannot be made in a month or a year. The capacity of our airship plants must be quadrupled. This will take a long time. It takes two and a half to three years to build a battleship. There must be no politics in our country as affects the great emergency facing us.

We are not preparing with relation to the present war. There would not be time to send soldiers to take part in the present war even if we desired to do so, but the President and the Congress have no such desire or intention.

Great men have ever believed that they were greater than other great men. Even those who have made failures of government are unconscious of it and are convinced in their own minds that they could conduct preparations for defense and even war, if necessary, better than the Chief Executive of the United States, selected twice by an overwhelming vote by our citizens as their leader and as Commander in Chief of the Army and Navy under our Constitution. These statesmen propose that the conduct of defense preparations and the expenditure of the money appropriated by Congress shall be made by a committee of distinguished businessmen. Woodrow Wilson as President of the United States conducted the most remarkable mobilization of an army of four millions of men more rapidly and more successfully than was ever recorded in history. He mobilized the resources of the United States both economically and industrially. He brought into the services of the Government dollar-a-year men, consisting of the greatest economists, monetary experts, and captains of industry. At the head of the War Industries Board he placed Mr. Bernard M. Baruch, recognized then and now as one of the greatest monetary and industrial experts. Woodrow Wilson's administration of the war and the preparations for war were a glorious tribute to our constitutional form of government. Our country is fortunate indeed that it has in the White House today as its Chief Executive a man who served through the World War as Assistant Secretary of the Navy and who has studied and understands preparation for war and the conduct of war. They are fortunate indeed in having as their Chief Executive a man of action, which quality is required more today than probably any other characteristic in a leader. Let it not be understood that I am attempting to convey the impression that President Roosevelt is the only man that could successfully conduct our Government as Chief Executive. I am simply urging that our people follow the leadership of their constituted authorities. The President has already taken steps, as did Woodrow Wilson, to create a great War Industries Board. He has placed at the head of that Board two of the greatest business executives in the United States. And may I call attention to the fact for the purpose of disclosing that there will be no politics in our preparation for defense that both of these distinguished gentlemen are affiliated with the Republican Party.

We must each and all of us realize that this is our country, that this is our Government, and that the responsibility for its defense falls equally upon each and all of us. Whatever sacrifices must be made we will meet equally and unselfishly. We intend to say to

the world and prove to the world that we love our Constitution and our institutions; that we love our independence and our liberty; that we love the Bill of Rights with its guaranties of freedom of assemblage, freedom of speech, freedom of the press, and the right to worship our God as we see fit; and that we will give what we possess, and our lives if necessary, to prevent forever the destruction of these things that we love.

We Have Had Enough of Discord

EXTENSION OF REMARKS

OF

HON. EDWARD R. BURKE

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Monday, June 3 (legislative day of Tuesday, May 28), 1940

ADDRESS BY WENDELL L. WILLKIE AT AKRON, OHIO

Mr. BURKE. Mr. President, in these chaotic times it is important that widest circulation be given to the carefully considered views of able and patriotic citizens.

By common consent Wendell L. Willkie has rapidly assumed a position of leadership in thought in this country. I ask unanimous consent that there may be inserted in the Appendix of the CONGRESSIONAL RECORD an able and patriotic address delivered by Mr. Willkie before the American Legion Post in Akron, Ohio, on May 28, 1940.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

We have come together here to celebrate our faith in America and to give expression to our patriotism.

Often in gatherings such as this we can most fittingly express our emotions with fine words. We can refresh our minds with new images and derive new strength and resolution from the phrases of patriotic orators.

But today, I fear, our situation is such that fine words and phrases are powerless to celebrate our love for the United States. Today, as sometimes in the past, we are faced with grave decisions involving the destiny of our country. Not what we say here, but how we decide to act, will be written in history. We are faced with the necessity for action.

Twenty-six years ago Germany marched into Belgium. The Kaiser's troops laid waste to peaceful towns, crushed a feeble army, forced their way into France, and were at last stopped in the Battle of the Marne, only 30 miles from Paris. Three years later it seemed to us in America that democracy, our way of life, was in peril. We declared war on German imperialism. We organized the greatest military expedition in history. And we did save the democratic world from destruction.

Today that catastrophe in Belgium is repeating itself on a more gigantic scale. Holland was vanquished in 5 days. Belgium, with an army three times as big as the active force of the United States, was overwhelmed in 10 days. Germany is now striking at Paris and London and democracy is again threatened.

We here in the United States look on, aghast and bewildered. The thoughts that cross our minds are so appalling that few of us dare to speak out. The decisions that we must make are so critical and far-reaching that we scarcely dare to make them. It is a time to try our souls.

EXPERIENCE OF 1917 IS RECALLED

But of all people in the United States, we who are gathered here tonight, together with our living comrades, are most qualified to speak. We know what war is, not from books and not from theory, but in terms of work and danger, sweat and blood.

It fell to us in 1917 to drop our jobs, to submit to discipline, to peel potatoes, to learn the manual of arms, to study ballistics. It fell to us to do a lot of dirty work. It fell to some of us to go over there and get ourselves shot at. And it fell to some of those whom we had grown to love as dearly as our own folks to stay over there under the white crosses and stately monuments.

What is our attitude toward this war? We who decided the last one must answer that question clearly and fearlessly.

First of all, we don't want to get into any war if we can possibly help it. When we turned in our rifles and put our uniforms away in camphor, 22 years ago, we hoped that we had seen the end of war in our lifetime, and for many lifetimes to come.

We were disillusioned about the glories of war and the flag-waving. We felt that we had done a job and we wanted that job to stick. We must not lose our heads now. We must start with the fact that we don't want to go to war, and don't want our sons to go, either.

But while we have been living here in peace, trying to do our peacetime jobs, something has happened in Europe which we could not control. A man has arisen whose thirst for conquest and lust for blood surpass almost any in human history. This man has spent the last 7 years organizing a great nation with one unified aim—to fight, to conquer, and to kill.

To this end he has destroyed representative government, flouted the church, depraved the youth of his country, conscripted labor and built the most terrifying war machine ever devised. While we in America, and our sister democracies in Europe, were trying to make better lives for ourselves, this man was harnessing the energies and ingenuity of 80,000,000 people to his own warlike purposes. And as a result he has gone a great way toward destroying European civilization.

HATE AND FEAR OF HITLER CITED

We don't like this man Adolf Hitler. He isn't our kind of a man. His ideals of war and bloodshed don't fit with our ideals of peace and commerce. The fruits of his labor are hate and death. The fruits of ours are happiness and life. He shall not enter here.

But it isn't only that we hate him. We must also fear him. Let us admit the fact. A direct attack by Hitler on this continent may be highly unlikely—and I believe it is unlikely—but as men who have seen something of war, you and I know that a doughboy trying to stand up against those fast-moving, armored, mechanized troops would have no chance.

We had some mechanization in our war. There were some tanks and airplanes and a few armored cars. And we know how helpless an exposed infantry column may be in the face of those weapons. But in this war those weapons are vastly multiplied, both in numbers and effectiveness. They sweep men down before them like rats. And they have revolutionized the tactics of warfare.

I am not being an alarmist. I am stating a fact. And to this fact there can be only one answer. However firm our resolution may be to stay out of this war, and however remote the chances may be that Germany or some other aggressor will attack our shores, we must set about the business of building a defense for ourselves immediately and without stint.

We cannot leave our shores and our cities exposed to an invader who has so far not hesitated to destroy anything that happened to cross his path. We cannot risk sending our boys against him as poorly equipped as the British and French boys who are defending their countries today. We do not want war. But we cannot have slaughter and destruction.

Let us, then, look at this problem of defense. What do we mean when we say that we must defend ourselves?

There are three separate considerations, and concerning each of them we must be forthright and clear.

The first consideration is that of assistance to the Allies. We can dismiss as entirely academic any thought of going over there to save them from the present emergency. We have no troops to send, and if we had the troops we should lack the equipment.

ALLIES CALLED OUR FIRST DEFENSE

Nevertheless it is clear that England and France constitute our first line of defense against Hitler. If anybody is going to stop Hitler from further aggression, they are the ones who will do it. Just putting the matter in the most selfish light, if Britain and France lick Hitler now, we may be saved billions of dollars, billions of tons of armaments, billions of hours of wasted effort and unfruitful work. Just on the most selfish basis, it is enormously to our advantage to have them win.

It must, therefore, be to our advantage to help them in every way we can, short of declaring war. Our Government has been slow in getting this help to them. One reason for this is that we are industrially unprepared. But another is that no one seems quite clear as to what we should do.

Let us be practical about this. If I were in need and you wanted to help me, what would be your first act? Would you sit down and think up ideas of your own? Or would you ask me in what way you could help me most? Now perhaps through the ordinary channels of diplomacy our Government has asked the Allies this question. But if it has, we, the people, haven't heard about it, and we certainly don't know the answer.

We assume that the Allies want planes, but maybe they also want butter. We don't know whether it would really help them much to repeal the Johnson Act, or whether it would help them to give up some of our own military secrets.

So, I should like to make this proposition. I should like to ask Secretary Hull to ask the democracies, publicly and openly in the name of the American people, what help, short of troops, the American people can give.

If the Allies respond with a request, then we can debate that request on its merits. We can debate it nonpartisanly and nonpolitically as a unified people. Even if we find that we cannot grant it, our public inquiry will have helped Allied morale, will have helped a little to check Hitler.

The second department of national defense is that of our own Military Establishment. Some people seem to think that the present administration ought to be able to pull a big army and a big air force out of its hat. But we must be fair. America has never wanted a big standing army.

NEEDS FOR DEFENSE ARE OUTLINED

Militarism is uncongenial to our way of life. If the administration had sought to build up our Army step by step with those of Europe we should have bitterly opposed it. It is altogether natural and proper that we should confront the present emergency with a small army, a moderate air force, and I believe, a strong navy.

But although we wanted a small army, we did not want an incompetent one. We did not want an army so poorly equipped that, no matter what their bravery, our boys would be run over by a really well-equipped army of comparable size. But this is just what we've got.

On the basis of its present plans, the Army needs 241,000 semiautomatic rifles, which have replaced the old Springfields of our day. As of May 1, 1940, it had on hand only 38,000 of these rifles. The Springfield Arsenal is turning them out at the rate of only 200 per day, which means that the 105,000 now on order will not be produced until September 1941.

An additional 65,000 ordered from the Winchester Arms Co. will not be ready until June 1942. Thus we cannot hope for an adequate peacetime supply of this most elementary weapon for another year and a half.

Maybe it is all right for the politicians to assume that an order for a rifle is the same thing as a rifle. But a doughboy has never been known to make that mistake.

The Army very conservatively estimates that we need 1,400 modernized 75's. But we only have 141 of the modern version of these indispensable guns. We need about 3,800 60-millimeter mortars, but we only have 3.

Our tank equipment is almost ludicrous. We have no modern heavy tanks. The Army wants 700 modern light tanks and only has 10 on hand. It wants 200 modern medium tanks and only has 18 on hand. As for ammunition, the Army needs 74,000,000 rounds for .30-caliber automatic pistols but has on hand only 17,000,000 rounds.

It needs 2,600,000 rounds for the 37-millimeter antiaircraft guns and has only 46,000. It has only about half enough ammunition for the existing 75s. And it needs 1,300,000 gas masks and has only 400,000.

OUR AVIATION TECHNOLOGY HAILED

In aviation technology this country leads the world. Nevertheless, the expansion of this vital industry has been so slow that we have failed to supply our own needs, let alone help the democracies on any significant scale. Our air force is smaller than that of any major European power and a great part of it is more than 2 years old. According to the most optimistic estimates, we are now producing barely 400 planes a month, almost all of them for the Allies.

The vital importance of this arm to the boys on the ground was emphasized in the recent maneuvers of the Third Army in Louisiana. Maj. Gen. Walter C. Short, commanding the Blue forces, said that out of 34 missions which he had requested of the Air Corps, only 2 were fulfilled. He made certain recommendations for correcting that weakness. But if such a record had been turned in during actual combat, it could not have been corrected by recommendation. Our boys would have paid for it with their lives.

Surely the administration is not presenting the facts fairly when it tells us that we have a well-equipped, modern Army. Nor, for that matter, has it given us any realistic idea of what a well-equipped Army and a big air force will cost. In spite of our present unpreparedness, our defense expenditures have been enormous.

In the 10 years since 1930 we have spent about $6,600,000,000 on defense. If it has cost that much to get ourselves poorly equipped, how much will it cost to get ourselves really modernized? It is a staggering thought. It means that in addition to the biggest national debt in our history, and on top of big annual deficits, we must carry a huge new burden, the size of which the politicians do not dare to estimate.

A recognition of the size of this burden leads to the third category of national defense, that which can be called industrial defense. By industrial defense I mean our ability to make the equipment that our Army, Navy, and air force so vitally need.

Ours is not a war economy like Hitler's. It is a peacetime economy. Our factories are equipped to produce what you and I want to consume. In order to produce the necessities of war, they must be converted or partially adapted to specialized products for which there is no civilian market.

This is a gigantic task. It requires minute knowledge of each industry. It requires almost infinite planning. It requires intelligent coordination. And above all, it requires that all elements in our society, government, industry, finance, labor, and even the consumer and the taxpayer, work together harmoniously.

Plainly, all defense rests upon industrial defense, without which we cannot produce the equipment that we need. But the keystone of industrial defense is national unity.

National unity is something that money cannot buy. No billions of deficit, no tens of billions of debt, can purchase it.

National unity is something that cannot be conjured up with words. No charmed phrases on the radio can create it.

For 8 years now, by the expenditure of vast sums of money, and by the coining of magic phrases, we have torn this country asunder. A government intent upon raising its own power to the *n*th degreen has pitted the people against business, labor against industry, State against State, pressure group against pressure group.

Our Government has sought power and won it by sowing discord among the people and the people's enterprises. It has spread among the people a great fear of business, and it has spread among businessmen a great fear of the people. The result is industrial and economic demoralization and 10,000,000 unemployed.

This is the heart of the crisis that we are facing today.

We, the people of this country, who own, operate, and work in the 10,000,000 enterprises that the new dealers dismiss as "business," cannot tolerate this discord. We are faced with a crisis perhaps as grave as any in our history. And we say to the new dealers and the troublemakers in Washington:

We believe in ourselves, the American people. We believe in our own ingenuity, our own energies, and our own sense of fairness.

We believe in our American liberties; in our American laws; in our American traditions of free enterprise.

We believe in our industries, which have revolutionized the world and provided us with the widest horizon that any people has ever had.

We believe in our workers, their skill and craftsmanship, their love of a full day's work, their desire for a full opportunity to get ahead.

We believe in our young men and women, their desire to learn, their desire to take their places beside us at the controls of industry, their desire for a new future.

And we believe, finally, that these elements in our society, and all other elements in our society, desire to work together, to build a still greater Nation than the one we have now.

Therefore, we say to the new dealers and the troublemakers: Let us work together. We have had enough of discord.

Let us bring together the industrial brains of this country, and the labor of this country, and the young men and women of this country, and everyone who belongs to this country and lives in it.

And let us take our vast resources out of the earth and transport them to our factories; and let us assign each factory a job for the defense of this Nation; and let us gear these jobs one to the other, so that each will fit, so that there will be a minimum of waste, and so that our Army, our Navy, and our Air Force may be adequately equipped as quickly as possible.

This we recognize as a difficult job. But it is a job that we all want to do. It is a job that we can do, if we work together.

And so we say to you: Bring us together.

Launching of Battleship U. S. S. "Washington"

EXTENSION OF REMARKS

OF

HON. DAVID I. WALSH

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Monday, June 3 (legislative day of Tuesday, May 28), 1940

ADDRESS OF HON. DAVID I. WALSH, OF MASSACHUSETTS

Mr. WALSH. Mr. President, I ask unanimous consent that the speech delivered by me at Philadelphia, Pa., on Saturday, June 1, at the launching of the battleship U. S. S. *Washington,* be printed in the RECORD.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

We are here today to witness the launching of a mighty battleship, the U. S. S. *Washington,* the first one of its class to be added to our fleet in nearly 20 years.

In the name of the President of the United States, the Honorable Franklin D. Roosevelt; the Secretary of the Navy, the Honorable Charles Edison; and in my own name I extend heartiest congratulations to Rear Admiral A. E. Watson, commandant of this, the fourth naval district, and to the officers and men of the Navy who, by their devotion to the service of their country, their diligence, their skill, and their engineering genius, have made possible this great achievement. I extend congratulations also to the civilian personnel who, with just pride and real enthusiasm, have participated in the building of this battleship.

The construction of a battleship is a tremendous undertaking. The keel of this vessel was laid on June 14, 1938; it will probably be completed in December 1941, and it is estimated to cost approximately $80,000,000.

Battleships, as you know, are named for the several States, but it is singularly appropriate at this hour that this ship, named for the State of Washington, bears also the name of the father and defender of our country.

George Washington was a lover of peace and therefore a firm believer in national defense. It was he who said, "To be prepared for war is one of the most effectual means of preserving peace." This means that if we really seek and earnestly desire peace we must be stronger than those who seek war.

It is perhaps an anomaly and a contradiction to speak of peace on an occasion like this, when we are launching a battleship. The very purpose for which a ship like this has been built would seem to bespeak militancy and those things which we associate with war. But in the real and American sense this is a superficial view. The policy of preparedness underlying the increases in our Navy, as is evidenced by the launching of this vessel, hides a deep and more

significant meaning. We must understand that meaning to appreciate the real purpose for which we have sought to increase our naval forces. Our Navy is for defense, not for aggression. It is for peace, not war.

We are a peace-loving people. Following the example of those who founded the democratic institutions under which we now live and who charted our first foreign policies, we have sought in our international relations to avoid those alliances, those entanglements with foreign nations which lead to war. We have made some real sacrifices in the name of peace. It is not inappropriate to mention one of them today, namely, the scrapping of 30 naval vessels, including battleships and cruisers which cost approximately $285,000,000, following the Naval Armament Limitations Treaty in 1922.

When we look about and consider the present-day world in which we live, the death struggle for power on one hand and for national existence on the other, the need for providing and maintaining an army, navy, and air force that can adequately protect us against foreign aggression is imperative, an obligation of the most vital and compelling importance if we are to seek safety and security for our Nation.

The American people are determined at all costs to prepare for any eventuality that may follow the European war. We do not seek war. We have no imperialistic designs. We are concerned only with self-protection. Every loyal American insists that our land and our people be not left to the mercy of a foreign aggressor or a combination of foreign powers who might see fit, attracted by our great resources and the wealth within our boundaries, to launch an attack upon us.

This event today is a memorable one in our history. It is the beginning of a renaissance in naval preparedness that will not cease until we have a naval fleet of such size, efficiency, and power that no prospective enemy or group of enemies dare assail us.

Some misunderstandings exist with respect to the present strength of our Navy. The American people should know and fully appreciate the tremendous progress that has been made since we awakened from the "sleeping sickness" that affected us during the years of the naval armament limitation treaties, from 1922 to 1937. In an honest attempt to comply with the spirit of the limitation treaties we permitted our Navy to reach an inferior position. Other nations pursued an opposite course and greatly expanded their naval-construction programs. With the termination of these treaties in December 1936 came an awakening as to the weakness of our position and the need of a large increase in our own naval program.

Since 1933 we have built and added to our fleet a total of 104 combatant ships, including 3 aircraft carriers, 2 heavy cruisers, 9 light cruisers, 62 destroyers, 26 submarines, and 2 gunboats, and, in addition, 7 auxiliary vessels.

We have now under construction 56 combatant ships, which includes the battleship we are launching today and 1 to be launched at New York on June 13, the U. S. S. *North Carolina*.

Our Navy in November 1933 had an aggregate tonnage of a little more than 1,000,000 tons, one-third of which was in the over-age or obsolete category. Our new Navy, which means ships now afloat plus the ones now under construction and plus those which Congress has authorized and which we are going to construct with all possible speed, when completed will have an aggregate tonnage of nearly two and one-fourth million tons and will comprise a balanced Navy of approximately 522 vessels. All new weapons of warfare have had their effect on naval strategy, tactics, and on naval construction. In the case of aircraft, as in the case of weapons such as the torpedo, submarine, and high-powered guns, the threat of attack has been anticipated by the inclusion in naval vessels, from destroyer to battleship, of appropriate counterweapons and powers of resistance. Increased power and effectiveness of antiaircraft batteries, increased speed and maneuvering ability, increased thickness of deck armor, and greater compartmentation, are all characteristics employed to resist air attack.

Air power, in a restricted area, comparatively close to its home bases, has become increasingly effective against ships and shipping within ready range of these bases. In considering this aspect of the war in Europe, we must realize that the British Navy has been forced to operate under the worst possible conditions. It is, of necessity, operating in restricted areas and is subjected at all times to the hazards of shore-based aircraft and small as well as large submarines. Naval forces are always at a disadvantage in operating against land forces.

Due to the limited range of aircraft, our self-sufficiency in food, and our geographical location, the United States is not confronted with a similar situation. Our home ports and shipping centers are not only farther from tenable air bases but they cover a wider area and are available in two oceans.

Manifestly all naval powers have been giving serious consideration to the effectiveness and relative security (ability to remain effective) of naval ships against all threats, including attacks from the air. It is significant that all are continuing their naval building programs. Even admitting the practicability of accurate bombing in the face of determined resistance of air forces and antiaircraft weapons, the heavy bomb, with its restricted ability to penetrate armor plate, is certainly less potent than the heavy shell. That these views are held by all of the principal naval powers, including the belligerents in the present war, is indicated by the recent completion and continued building of battleships, as follows:

1. Germany recently completed two and has four under construction.
2. Italy likewise has recently completed two and has two building.
3. Japan, while not having completed any recently, we have positive information that she is building four battleships, but it is believed that she actually has eight or more under construction.
4. Great Britain has nine battleships building.
5. France has recently completed two and has four under construction.
6. United States has completed one today, another will be completed on June 13, and we have six under construction.

Some have questioned the vulnerability of battleships to attack from the air and as to whether, in the light of present-day offensive power of aircraft, battleships have ceased to be of a military value commensurate with their enormous cost.

The fact still remains that the battleship ever has been and, as far as can be foreseen, ever will be the supreme embodiment of sea power. The battleship is the least vulnerable of any vessel against air or any other form of attack. It is the most formidable and hardest hitting. It is a fortress at sea. It is capable of withstanding maximum punishment from guns, torpedoes, mines, and bombs. No fleet can afford to lack them if they are a component part of an enemy's fleet. As a reserve in power and as a rallying point for all other types of warship, the battleship is yet the backbone of sea power. Under no circumstances should the United States abandon its battleships until every country in the world has done likewise.

It is British preponderance of naval power that has gained control of seaborne trade and denied this trade to Germany. It is Germany's preponderance of air power which threatens Allied and neutral trade in comparatively restricted zones near German bases. Neither of these facts points to the obsolescence of surface men-of-war or the superiority of air power. They merely point to the restricted effectiveness of unbalanced military or naval forces.

In considering at this time the question of air power versus sea power, the following must be kept in mind:

(a) Our situation is entirely different from that of the British.

(b) Germany's air power from the very beginning of the war has been greatly superior to British air power.

(c) For a period of about 8 months, British sea power has held a greatly superior air force in check, and without this sea power Britain today would probably be another Poland.

Our program for expanding and strengthening our national defenses at every point and by every means is planned to give full recognition of the prime importance of aircraft and its important place in military and naval establishments. No force ashore or afloat can afford under any circumstances to be without ample aircraft support. We are proceeding on that basis.

But there is not a particle of evidence to support the theory that aircraft alone can supply the primary defense needs of our country. Indeed, we can be very positive that such is not the case.

As to the comparative value from our national-defense standpoint of battleships and aircraft, the answer is that each complements the other and both are indispensable.

An adequate navy, capable of meeting and defeating an enemy's navy at sea, is the only sure way that war can be kept at a safe distance from our coasts and the only sure way to bring the war to a close.

We live in a dynamic, not a static world. Undoubtedly the facts will change. More powerful explosives may be developed, more efficient fuels may become available, which will increase many times the effective radius of action of aircraft, submarines, and surface craft, or other more effective weapons of war may be invented.

If the basic facts change, we must reorient ourselves to new situations, reevaluate the facts, and readjust our Military Establishments to meet these new conditions.

I know of no more appropriate message to give to the American people on this historic occasion than to urge them to a reawakening of the spirit of the founders of our Nation. Let us dedicate ourselves, as they did, to the preservation of the truths and political principles set forth in the Declaration of Independence. After proclaiming to the world the great inalienable truths which are the foundation of our freedom, the bedrock of our democratic institutions, and the reservoir from which our greatness and prosperity has sprung, each of the 56 patriots signed his name to that immortal document. The last sentence, immediately preceding the signatures, is inspiring and indicative of the spirit of supreme sacrifice which justified their struggle for independence. I quote: "And for the support of this declaration, with a firm reliance on the protection of Divine Providence, we mutually pledge to each other our lives, our fortunes, and our sacred honor."

In the present world crisis, with gloom and despair encircling us, with uncertainty as to the future, let every American, with a firm reliance on the protection of Divine Providence, pledge his honor, his fortune, and his life to the building up of the defenses of our country, to the end that we may be impregnable against invasion and thereby preserve our lives, our homes, and our priceless free institutions.

The International Situation

EXTENSION OF REMARKS
OF
HON. CLAUDE PEPPER
OF FLORIDA
IN THE SENATE OF THE UNITED STATES
Monday, June 3 (legislative day of Tuesday, May 28), 1940

RADIO ADDRESS BY HENRY R. LUCE

Mr. PEPPER. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD a very able address delivered over the Columbia network on June 1 by Mr. Henry R. Luce, editor of Time and Life magazines, on the international situation.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and it is so ordered.

Mr. WHEELER. Mr. President, was this the speech made by Mr. Luce which was really advocating that we get into the war?

Mr. PEPPER. I did not so construe the speech of Mr. Luce although it speaks for itself.

Mr. WHEELER. I read the speech, and if it was not a speech which practically advocated that we get into the war, I do not know what it was. But I have not any objection to it going into the RECORD.

Mr. PEPPER. Mr. President——

The PRESIDING OFFICER. Unanimous consent has already been given.

Mr. PEPPER. Very well.

The address is as follows:

I want to talk about what we can do to meet the crisis and to overcome it.

The gigantic conflict now raging threatens our national existence in any particular you may wish to name. If you are one who loves America, then there is nothing that you like or are interested in which is not already gravely threatened by this struggle. For example, if you like our standard of living—not as high as it should be, but by far the highest in the world—then that standard of living is gravely threatened. If you are interested in free enterprise, then that is threatened. If you are interested in labor unions, then they are threatened. If you are interested in art and culture, they are threatened. If you are interested in the institutions of self-government, in the right to vote, in trial by jury, in the free press, then all these and more are threatened. And if you are interested in the right to worship God in your own way, then that most definitely is threatened. I do not say the Christian religion can perish. By all the promises we hold most dear, it cannot. But the Christian church can be driven from the face of the earth back into the catacombs.

Now we, the American people, do not choose to surrender our lives to circumstance. We choose to act. Accordingly we must give to our leaders of both parties some rough blueprint of the will and the purpose that is in our hearts, for we have at last a common purpose; for we intend, before many years are passed, we intend to have peace, real peace, in a world of peace.

Here, then, it seems to me, is what we can tell the leaders of a united Nation in broad outline, but in plain English:

First, we are profoundly willing to strive with all our might and main to make our democracy work better. We know we must go to work, and work harder. It is no longer a question of finding jobs for the unemployed. We urgently need today the full-time services of every able-bodied man and every able-bodied woman in our land. In the next few months America must and will go back to work.

And, secondly, we know we have to prepare to fight. Yes, we'll not go on wrapping words in cotton and muffling unpleasant sounds by sticking our fingers in our ears. We won't be fooled by the sound of words like "defense" and "safety." The kind of armament we have ordered, the kind our Senate voted for 74 to 0—that kind of armament isn't anything at all like the pearl-handled pistol our maiden aunt might keep under her pillow. We don't expect to buy a war machine out of a show window and hire a chauffeur to run it. We, all of us—brothers and sons and fathers—we are ready to get ready to fight. If you are anything like me, you will hate every inch of the way of armament, every inch of the way until at last we can throw the whole wasteful murderous mess of tanks and guns and bombers into the bottom of the sea. Or most of them anyway. It will be a long, long road. You will hate it to the end—and you will not falter.

But thirdly, the problem which is troubling most of us most is how to help the Allies right now in their back-to-the-wall struggle against Nazi conquest.

Before we can answer that question we have to face frankly what may happen. Suppose Hitler wins—this summer. If Hitler wins, the United States of America will have to make some arrangements for living indefinitely in the same world with Adolf Hitler. Now, it's going to make all the difference how we deal with him. Faced with a triumphant Germany, we are going to hear a lot of plausible talk about how maybe Hitler isn't so bad after all—about how he is going to settle down and paint pictures and be a perfectly sweet benefactor of mankind. Or the words may be different, but that will be the tune. If we deal with the third Reich on a basis of appeasement of any kind, it will follow as sure as night follows day that we will pay for it in blood and tears—in the bloody end of all our democracy. We must deal with Hitler as with an enemy—an enemy of peace—our peace. If Hitler wins, nothing must stop us for one moment from arming ourselves up to the limit. And as we arm and as we deal intelligently and firmly with Hitler, so will we be able to bring comfort and healing to millions of defeated men and women. These men and women will not be defeated in their spirit, and their children will not grow up defeated if we acquit ourselves without fear and without reproach.

Now, secondly, suppose Hitler is not able to bring Great Britain and France to their knees—to his knees—this summer. Then the Allies are likely to win. But how soon they will win and how great their chances are of averting world-wide chaos—that will depend upon how much help we give and how fast we give it. We would give a good deal today for a chance to stop Hitler without going to war ourselves. If we could buy an Allied victory in 1 year for $5,000,000,000 we would be the luckiest people in the world. So, let's make our politicians understand that we don't want to "miss the bus," we want to give the Allies unlimited aid as fast as possible.

But what about now—what about now, this tragic, desperate moment? There is something we can do immediately and do it better now than ever again. We, 130,000,000 American democrats, can stand up and speak our mind. We can strip off our false cloak of neutrality and announce to the world—to the brown men and the black men and the yellow men and to all the white men of the world—that we stand now and so long as any of us shall live we shall continue to stand for democracy, for international law, for the sanctity of treaties, for freedom, for the individual rights of man, for the faith of our fathers. We can make it plain that therefore we, as a nation, one and indissoluble, deeply wish that Hitler's attack may be beaten off, that we, as a nation will continue to refuse to recognize the Nazi domination of free peoples, that we as a nation will continue to oppose, by whatever means seem to us best, the consequences of Nazi victory.

Other proposals have been made. Senator PEPPER. has proposed that the President be authorized to sell to the Allies some of our Army planes to be replaced at any time by planes the Allies have on order here. I favor this proposal. And it might make a difference now. But I am ready, and I think the American people are ready, to be done with little gestures, little hints of how we stand. I think we are ready to speak out plain to tell the world how we honestly feel.

In my opinion, it is vitally important for us to do this now for our own sakes.

It is apparent that we cannot help others with arms—if we ourselves are not armed. It is even truer that we cannot help others spiritually except as our own spiritual house is in order. The American spirit has recently not been in good order. We can now go a long ways toward regaining our spiritual integrity, as God-fearing Democrats, if we stand up and speak our mind now.

How do we do this? We do it by calling upon each of our political leaders to declare himself now on behalf of himself and on behalf of us all. Let every political leader, high and low, speaking for himself and for us, state flatly in his own way (1) that he deeply wishes the defeat of Adolf Hitler and Nazi Germany; (2) that he will never vote to recognize the Nazi domination of once-free peoples; (3) that he will never in any way give aid and comfort to the Third Reich; (4) that he will continue to oppose by every wise and practical means the consequences of Nazi victory.

Fully realizing his great responsibility, let us, nevertheless, call upon Franklin Roosevelt to make such a statement. It may not be news how he feels. But it will be news that the American people, whom he serves, now want him to say it plain. And, believe me, that news will be like a gospel of hope from Greenland's icy mountains to India's coral strand.

And let us call upon Herbert Hoover, of California, first private citizen of the world—let us call upon him to say it, too. It may be no news that he feels that way, either—but news, great news, that his fellow countrymen want him to say it.

And we will call upon Cordell Hull, of Tennessee, and upon his friend and predecessor as Secretary of State, Henry L. Stimson, of New York, both of whom, against the terrific weight of apathy and ignorance, have fought with all their hearts and minds to stem the oncoming tide of international lawbreakers. We will call upon KEY PITTMAN, of Nevada, far-seeing chairman of the Foreign Relations Committee, and upon Senate leaders ALBEN W. BARKLEY, of Kentucky, and CHARLES MCNARY, of Oregon, the furthest west of freedom. And we will call upon the most active of our Presidential

candidates—upon Thomas E. Dewey, of New York, and Robert A. Taft, of Ohio, and Burton K. Wheeler, of Montana, and Arthur H. Vandenberg, of Michigan, and Wendell Willkie, of Indiana. And you and I, wherever we are, will call upon every candidate for office in the place where we live—we will call upon them to stand up and speak their minds.

Mr. Hoover once said to me there have not been many times in history, but there have been a few times, when declarations have changed the course of history. This can be one of the times. Rising above all partisanship, let all our first citizens fashion the words which mean faithful comradeship with all men everywhere who work and fight and pray for peace and freedom.

Are we or are we not in favor of freedom and democracy? Will we or will we not compromise with the lawbreakers of the world? Those are the simple questions we need to answer now as a united Nation. We can reserve to ourselves freedom of action—to take only such steps in defense of our principles as may seem to us from time to time to be wise and effective. But by standing up and speaking our minds now, we will keep alive hope in the hearts of the defeated and bring new courage to those who press on to battle.

For ours can yet be an epoch of great hope and human progress. The trouble we see about us is not the end of the world. It is only the end—nearly the end—of much folly and miscalculation and stupidity. I know that there are young people listening to me who are quietly resolved to build a better world when their time for leadership comes. And to them I say, you will have your chance and you will succeed if you do not falter now. As for those of us who are older, we are totally unwilling to leave behind us, as the record of our generation, the world as it now is. And to all of my generation I say we, too, will have our chance—our chance to redeem the folly and stupidity of which we all were a part. We, too, will have our chance to leave behind us a world better than we found it. And we will not falter now.

Communist Broadcast

EXTENSION OF REMARKS

OF

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Monday, June 3 (legislative day of Tuesday, May 28), 1940

ARTICLE BY MARK SULLIVAN

Mr. REYNOLDS. Mr. President, I ask unanimous consent that there be published in the Appendix of the CONGRESSIONAL RECORD an article by the pen of Mr. Mark Sullivan, newspaper columnist, under the date line Washington, May 29, entitled "Communists Go on Air Sunday, Week After Roosevelt Warning."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the New York Herald Tribune of May 30, 1940]

COMMUNISTS GO ON AIR SUNDAY, WEEK AFTER ROOSEVELT WARNING—MARK SULLIVAN CITES PRESIDENT'S PROHIBITION ON TROJAN HORSE IN CRITICIZING RADIO FOR LETTING BROWDER SPEAK—ASKS, WOULD RUSSIA PERMIT IT?

(By Mark Sullivan)

WASHINGTON, May 29.—I listened to President Roosevelt's fireside chat about national defense, especially what he said about the enemy within our gates, the Trojan horse, the "fifth column"—that such must not be allowed in America. I listened to that and felt assured.

Then, next morning, I went through the mail on my desk. I found some announcements from the Communist Party, publicity hand-outs, read that the Communist Party is about to hold its national convention this week. I quote and condense:

"The Communist Party's national convention will be held in New York City May 30 to June 2. The probable Presidential and Vice Presidential nominees, Earl Browder and James W. Ford, nationally prominent Negro leader, will deliver their acceptance speeches Sunday, June 2. The speeches will be heard over coast-to-coast hookups of the Mutual Broadcasting System and National Broadcasting Co., from 1:30 to 2 p. m., eastern daylight saving time. The Columbia Broadcasting System will interview Earl Browder over a national hook-up from 8 to 8:15 p. m."

ROOSEVELT, THEN BROWDER

So—on one Sunday night Mr. Roosevelt on the radio, saying there must be no Trojan horse in America. On the next Sunday night the Communist Party and Mr. Browder on the radio!

The party sends out voluminous advance publicity. Obligingly, for the benefit of newspapers, the publicity hand-outs include advance suggestions of what the party platform will contain. Some of it is attack upon Mr. Roosevelt. Up to a year or so ago they used to praise Mr. Roosevelt. Since he showed sympathy for the Allies, and especially since he favored Finland, the Communists revile him. I quote and condense:

"The granting of war credits to Finland revealed the war course of the administration. Repudiate the militarization and armaments program. * * * The imperialist role of the Roosevelt administration. * * * The Roosevelt administration, supported by decisive sections of monopoly capital, is endeavoring to create 'national unity' * * * which aims to tie the American people to the war chariot of the economic royalists."

Most of the platform prospectus is the usual Communist thing. I quote and condense:

"The Communist Party of the United States stands stronger and more united around the banner of Marxism-Leninism. * * * It is necessary to heighten the Bolshevik vigilance of the party * * * We must develop to the maximum the international working-class solidarity of the American workers with the workers of the glorious land of socialism, the Soviet Union. * * * The present situation demands of the Communists that they act in the way Lenin taught: in the way taught now by the great, wise leader of the working people, Stalin."

That ladies and gentlemen, is what you will hear when you turn on your radio next Sunday afternoon and evening. You can't escape it—it will be on all major chains. The broadcasts, says the Communist announcement, "were granted by the three major chains in response to our request for free time."

The radio people say, truly, that it is not up to them to keep the Communist convention off the air. They have a policy of giving time for speeches of candidates of all political parties, major and minor. They say, accurately, that the Communists have legal standing as a political party.

But could not the radio people change their rules just a trifle? Could they not say "we will give time to all candidates for President, except such as are now under sentence to jail?" That would bar Mr. Browder. Or could they say "we will give time to all Presidential candidates except convicted liars and perjurers?" Or the radio people could bar the whole Communist Party by making their rule read: "We will give time to all political parties except such as are affiliated with a foreign government."

But it isn't really up to the radio companies. It is up to the Government. Whether the Federal Government or the State government of New York or the city government, I do not know. Except that there is a responsibility on Mr. Roosevelt. He cannot afford to let America go through the experience of hearing what he said against "fifth columns," and then within a week hearing Mr. Browder and the Communist Party on the radio.

The right of free speech? That is for Americans and American institutions. It is not for foreign governments and their agents and affiliates. From the "constitution of the Communist Party of the United States" I quote article II:

"The emblem of the party shall be the crossed hammer and sickle * * * with a circular inscription having at the top 'Communist Party of the U. S. A.' And in the lower part 'Affiliate to the Communist International.'" And article V: "All members of the party shall pay an assessment * * * for an international solidarity fund. This money shall be used * * * exclusively to aid our brother Communist parties in other countries."

CURB LIKE RUSSIA'S URGED

Our obligation of free speech to Communists is a matter not merely of our Constitution or our Bill of Rights, but of international relations with Russia. America can properly give to the American affiliate of the Communist Party exactly that degree of free speech which Russia would give to a Russian affiliate of our Democratic or Republican Party. And all the free speech they would get in Russia would be enough to say, "God help me," as they face the firing squad.

I am not sure the Russians would permit that much. I doubt if they would permit the word "God."

Our Postal Service

EXTENSION OF REMARKS

OF

HON. KENNETH McKELLAR

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Monday, June 3 (legislative day of Tuesday, May 28), 1940

EDITORIAL FROM SHEBOYGAN PRESS

Mr. McKELLAR. Mr. President, I ask unanimous consent to place in the Appendix of the RECORD an editorial from the Sheboygan Press of May 22, 1940, entitled "Our Postal Service." It is a fine statement of the Post Office Department's splendid service to the American people under its able head Hon. James A. Farley. I take great pleasure in having it inserted in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Sheboygan Press of May 22, 1940]

OUR POSTAL SERVICE

Postmaster General James A. Farley on his recent trip to Wisconsin, where he addressed the Wisconsin Postmasters Association, brought home to every one of these Government agents the importance of community service and how the Postal Department had risen to new heights in this respect.

He told of the efforts put forth by the Department in the matter of collecting applications of veterans for the bonus and the delivery of the bonds and the payment by check to the boys who desired to surrender them. Then he touched upon the social-security set-up, the increased amount of work it caused, and the efficiency that the Department showed.

All of these were activities new in the Postal Department, and yet this great network that reaches every section of the country and foreign lands was equal to the task. He told of the Rural Delivery Service and how communities have been brought in closer relationship, and he gave full credit to the men and women who comprise the Service.

In that whole address was not a word about the man at the head, the Postmaster General, who has put into the Department the last word in efficiency, who requires every postal employee to give the best that he possesses. The Postal Department of this country has never had a man at its head who could measure up to General Farley. Neither has it had a man who was so sympathetic to the administration, and that is why the Department has been such a success. It has been taken out of the red despite the fact that the Department is a clearing house for so many new activities.

Jim Farley has coordinated and brought the Service to the highest point in its career, but in his desire to give credit to the men and women in the ranks he seldom refers to himself. Every postmaster who attended the convention in Milwaukee was proud of the fact that he is serving under such a leader.

In the Wrong Spirit

EXTENSION OF REMARKS

OF

HON. CHAN GURNEY

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Monday, June 3 (legislative day of Tuesday, May 28), 1940

EDITORIAL FROM THE SIOUX FALLS (S. DAK.) DAILY ARGUS-LEADER

Mr. GURNEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Daily Argus-Leader, of Sioux Falls, S. Dak., under the heading "In the wrong spirit."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Sioux Falls (S. Dak.) Daily Argus-Leader]

IN THE WRONG SPIRIT

Appearing in the Brookings Register this week is an editorial written by a student about to be graduated from high school.

The high-school editor discusses the days that are to come for those who are about to step out of the high-school classrooms and the possible influences of the war. Outlining this subject, he writes:

"We're not afraid of death after life; it's death before life that we are struggling against. We don't want to bow to the gods of war at the commencement of our lives, to die before we've lived.

"We want life, liberty, and the right to pursue happiness. We want baking powder instead of gunpowder. We want home and unscarred landscapes. We demand the right to paint, to sing, or write. Why must we, the potential Rembrandts and Bernhardts, never satisfy our desire?

"This isn't just the cry of one small class of graduating seniors, it's the cry of one big class all over the world.

"When we walk out the front door of the high school we'll be thinking of our new diplomas, in the future tense, and we'll be proud we've got them.

"But for what?"

With these observations, the editor of the Argus-Leader is wholly in accord.

But they are incomplete. The student outlines what he is demanding from the world and presents not a word in explanation of what he proposes to give the world to justify the claims he is advancing.

Life, liberty, and the right to pursue happiness are privileges that must be created and maintained. They must be deserved and warranted. For their establishment and retention, sacrifices must be made.

Too many citizens today, however, appraise these privileges as something for which they need give nothing in return. They seem to regard the Government as a beneficial agent from which they can draw support instead of something which they must support.

Many high school and college graduates begin early in life to demand that they be given this or that instead of commencing their careers with an offer of service.

We suggest that they reverse their sentiments, thinking first of what they have to offer instead of what they want to demand.

The United States of America is a democracy. It is a government of the people, by the people, and for the people.

Whenever these basic principles are frustrated, the people are to blame. If they listen to inept leaders and if they are induced to barter their fundamental privileges for a political favor, then they must assume the responsibility for whatever the future has in store.

National Home Defense Force

EXTENSION OF REMARKS

OF

HON. C. ARTHUR ANDERSON

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, June 3, 1940

Mr. ANDERSON of Missouri. Mr. Speaker, on May 29 I introduced a bill (H. R. 9944) to establish a National Home Defense Force by permitting the voluntary enlistment in such force of all veterans, and enrollees, and former enrollees of the Civilian Conservation Corps for instruction in military tactics and the use of weapons of defense for use insofar as practicable in the maintenance of fortifications, equipment, stations, posts, and construction in conjunction with the armed forces.

It will be observed that this bill was introduced in the Senate by Senator BRIDGES, a very distinguished Member of that body.

The Bridges-Anderson bill provides that this enlistment shall be voluntary only and that the use of this force is limited to the United States and the Western Hemisphere. We do not seek to force military training upon the C. C. C. but leave it entirely upon a voluntary basis.

In the Civilian Conservation Corps are thousands of young men who will be called upon to serve in the armed forces if we are required to defend our Nation. By giving them the opportunity of basic military training, we will be helping them to protect themselves and their Nation. The more training a man has the better will be his chances if called to the colors.

A few days after the Bridges-Anderson bill was introduced a similar measure known as the Byrnes bill, which apparently has the blessings of the administration, was offered in the Senate. But before this body takes action on either bill I urgently suggest that you compare the two measures. In order to facilitate your comparison of the two bills, I am concluding this statement with a brief comparative outline of these measures:

COMPARISON OF BRIDGES AND ANDERSON BILL WITH HOUSE JOINT RESOLUTION 544 (BYRNES)

Bridges and Anderson bill	*Byrnes resolution*
C. C. C. and others in national home-defense force cannot be sent out of Western Hemisphere.	C. C. C. can be sent anywhere in the world.
Are to be trained and instructed in the use of arms and other weapons so that force can defend itself if attacked.	Can be armed and placed on firing line but — cannot be trained in use of weapons.
Voluntary service in force and only with parental consent if under 21 years of age.	Voluntary for 6 months or less—then compulsory.
NUMBER	
No limit. Could provide for over 1,000,000 men in 90 days.	Limited to 300,000.
CONTROL	
Officered by veteran qualified by War Department and appointed by War Department.	Indicated by Franklin Delano Roosevelt. Control by Sidney Hillman, C. I. O.

COMPARISON OF BRIDGES AND ANDERSON BILL WITH HOUSE JOINT RESOLUTION 544 (BYRNES)—continued

DRAFT, 22–36

Bridges and Anderson bill—Con.	*Byrnes resolution*—Continued
Seventeen to twenty-one and over 36 years. Will not interfere with draft ages.	Sixteen to twenty-four years. Will reach into draft ages (22–24) and will thereby force married men to serve in Army if and when draft occurs.

INDUSTRY

Will not interfere or disrupt business or hinder industry as this bill will serve to eliminate the need of conscription by providing a supplementary force to Army and Navy of a million or more trained men.	Will cause disruption of both business and industry by interfering with draft age 22–24, and will interfere with formation of national home-defense force by precluding the use by said force if present. C. C. C. camps (over 1,500) necessary to the speedy formation of the national home-defense force.

RELIEF

Will aid relief by taking over enrollees from C. C. C. (volunteer) as rapidly as enrolled at rate of 92 percent.	Will restrict relief aid to dependents of 300,000 enrollees.

ECONOMY

Is a means of providing $1 of home defense for every $1 expended.	Is unsound economically and will result in forcing the expenditure of unnecessary millions of dollars.

RESULT

Will enable the United States to have a well-disciplined force which can immediately protect military objectives and industry from the danger of sabotage. Will be a well-trained complement to Army and Navy. Is nonpartisan.	Will hinder preparedness and may bring about early conscription. Will be of little value to Army and Navy as C. C. C. will not be trained and properly disciplined. Is political.

Indiana Farmer

EXTENSION OF REMARKS

OF

HON. GERALD W. LANDIS

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 3, 1940

Mr. LANDIS. Mr. Speaker, according to United States Commerce Department figures, in Indiana, on April 1, 1930, the value of farms—lands and buildings—was $1,415,542,192, but declined in value under this administration by January 1, 1935, to $1,040,238,254, a decrease of $375,303,938.

Also, in the Seventh District of Indiana, our farm values have declined from $135,848,000 in 1930 to $97,983,000 in 1935, a decrease of $37,855,000.

Farm values decline under New Deal

[U. S. Department of Commerce figures]

County	Value of farms		Average value per acre	
	1930	1935	1930	1935
Clay	$9,927,425	$8,263,193	$54.82	$40.90
Daviess	14,997,717	10,605,170	61.88	42.88
Gibson	14,277,014	9,523,522	60.22	36.66
Greene	12,549,878	8,977,804	45.41	30.34
Johnson	18,874,968	13,491,217	101.12	70.41
Knox	20,501,604	14,782,408	70.36	49.92
Martin	3,759,051	3,265,393	24.54	18.58
Monroe	8,439,383	6,225,467	43.96	29.93
Morgan	12,916,694	9,666,768	60.62	41.95
Owen	5,903,035	4,030,440	30.91	20.78
Sullivan	13,702,104	9,152,369	58.35	36.35
Total	135,848,873	97,983,751		

SEVENTH DISTRICT, INDIANA, FARMERS

Agriculture in southern Indiana is a big business. We now have a capital investment of almost $98,000,000. Eighty-five percent of the total land area in the Seventh District is in farm land.

We have over 26,400 separate farms, with a farm population of more than 114,000 persons. We supply the Nation each year with 15,744,000 bushels of corn, 27,829,000 gallons of milk, 8,666,000 dozens of eggs, 4,632,000 bushels of wheat, 3,183,000 chickens, and 1,273,000 pounds of butter.

Other important crops are oats, hay, soybeans, fruits, and vegetables. We produce over $1,000,000 worth of fruits and vegetables each year.

Knox County leads the district in the production of corn, hogs, wheat, oats, apples, and chickens.

Johnson County leads in the production of milk and sheep. It also has the highest yield per acre of corn and wheat.

Sullivan County leads in the production of butter and wool, and is second in the production of eggs, chickens, and sheep.

Greene County leads in the production of eggs, and is second in the production of oats, butter, and vegetables.

Gibson County leads in the production of hay, potatoes, and soybeans. It is second in the production of wheat and corn.

Daviess County ranks first in the production of cattle, second in potatoes, and is third in the production of oats, milk, eggs, and butter.

Monroe County leads in the production of vegetables.

Morgan County is second in the production of milk and apples.

Clay County ranks well up the list in milk, butter, and chicken production.

Martin County, our smallest in population, ranks fourth in potato production. It also ranks high in other vegetables and egg production.

Owen County, our second smallest county, stands well on the list in the production of sheep, wool, and chickens.

These reports are very valuable to me as a Congressman, because they give exactly the important agricultural activities in our district. It enables me to better represent my constituents in legislation or Government policies beneficial to their interests.

In trying to solve the farm problem the Republican agricultural fact-finding committee, of which I am a member, has been going direct to the dirt farmers of America for their advice and counsel. Especially am I grateful for the suggestions and the cooperation which has been given me by the farmers and their organizations in the Seventh District.

Members of the Committee on Military Affairs Seventeenth to Seventy-sixth Congresses

EXTENSION OF REMARKS

OF

HON. ANDREW J. MAY

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Monday, June 3, 1940

STATEMENT PREPARED BY THE LEGISLATIVE REFERENCE SERVICE

Edward F. Tatnall	18th, 19th.
John Floyd	20th.
John Coffee	23d, 24th.
Thomas Glascock	24th, 25th.
William C. Dawson	27th.
Duncan L. Clinch	28th.
Hugh A. Haralson	28th through 30th.
Pierce M. B. Young	43d.
Philip Cook	44th.
William E. Smith	46th.
John C. Nicholls	48th.
Dudley M. Hughes	62d.
William S. Howard	63d.
James W. Wise	64th through 66th.
William C. Wright	67th through 70th.
Homer C. Parker	72d.
Stephen Pace	75th, 76th.
Idaho (entered Union 1890):	
Thomas C. Coffin	73d.
Illinois (entered Union 1818):	
John J. Hardin	28th.
Edward D. Baker	29th.
W. A. Richardson	31st.
William H. Bissell	32d, 33d.
William A. Richardson	37th.
John F. Farnsworth	38th.
Green B. Raum	40th.
John A. Logan	41st.
John B. Hay	42d.
John B. Hawley	43d.
Stephen A. Hurlbut	44th.
Benjamin F. Marsh	45th, 46th, 53d through 56th.
William A. J. Sparks	46th, 47th.
George R. Davis	47th.
Thomas J. Henderson	47th.
Richard W. Townshend	50th.
Walter C. Newberry	52d.
John C. Black	53d.
Hugh R. Belknap	55th.
Thomas M. Jett	55th through 57th.
George W. Prince	57th through 62d.
William F. Mahoney	58th.
Lynden Evans	62d.
Frank T. O'Hair	63d.
John C. McKenzie	63d through 68th.
Loren E. Wheeler	69th.
William R. Johnson	70th through 72d.
Burnett M. Chiperfield	72d.
Chester Thompson	73d.
Leslie C. Arends	74th through 76th.
Edwin M. Schaefer	74th through 76th.
David Wallace	27th.
Willis A. Gorman	32d.
W. McKee Dunn	37th.
Henry D. Washburn	40th.
Jasper Packard	41st.
John Coburn	42d, 43d.
Thomas M. Browne	46th.
G. W. Steele	47th through 50th.
David H. Patton	52d.
John L. Bretz	53d.
Abraham L. Brick	57th.
Elias S. Holliday	58th through 60th.
Noble J. Johnson	69th.

We Must Be Ready

EXTENSION OF REMARKS

OF

HON. WILLIAM L. NELSON

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, June 3, 1940

EDITORIAL BY J. KELLY POOL, EDITOR, DAILY CAPITAL NEWS, JEFFERSON CITY, MO.

Mr. NELSON. Mr. Speaker, one of the outstanding editorial writers of Missouri, and I may say of the Nation, is J. Kelly Pool, editor of the Daily Capital News, Jefferson City, Mo. In recognition of his long and distinguished journalistic career, Mr. Pool was recently honored by the Missouri School of Journalism, oldest institution of its kind in the world. Under permission granted me, I am inserting an editorial, We Must Be Ready, as written by Mr. Pool and appearing in the Daily Capital News of June 1:

WE MUST BE READY

The United States is a great and rich country, and the way of life in these United States is very dear and abundant—fondly cherished and precious beyond price. Neither must be allowed to crumble. We must prepare as we never have prepared before to defend them against attack.

We do a lot of complaining and grumbling in this land of the free, and we criticize this and we condemn that, but down deep in our hearts we like it here. Underneath our faultfinding lies the realization of how fortunate we are to be living in this, the world's garden spot. We know full well that our Nation is the most favored of all, the choicest gem in the earth's jewel box, and we are grateful for the privileges and blessings which we daily enjoy. We may fret and fuss, but our love for the grand old United States of America knows no bounds, and words tumble from our mouths in praise of its traditions, its institutions, its resources, and its God-fearing, liberty-loving people.

It is a great and rich country. We have 6 percent of the world's area and 7 percent of its population. We own 71 percent of the world's motor vehicles and 30 percent of the world's railroads. Twenty-two million American homes are wired for electricity. There are 30,000,000 radios in the United States. We have a purchasing power of more than Europe's half billion population, more than Asia's billion population. We carry twice as much life insurance as the rest of the world. We control, here in America, two-thirds of the world's banking resources.

Our way of life is good. Here we have freedom of speech, of the pulpit, of the press, the right of assembly, and the right to trial by jury. We are the only country in the world pensioning the aged and ministering to dependent children and giving relief stipends to the needy. We pay our school teachers more than teachers anywhere else are paid. We pay our public officials more than similar officers are paid elsewhere. We pay our laborers several times as much as they earn in other countries. We have better food, better

clothing, better homes, better churches, better schools, better automobiles, better cities and towns, better recreational centers, better institutions, and better everything than any other people under the sun. Our standard of living has no equal. Here life is safe, life is satisfying, life is complete.

These are the things which now are ours. Without them life would be but existence—unbearable, intolerable enslavement. And because they are so dear to us and mean so much to us, we must gird ourselves to defend them. With brain and brawn, might and main, by day and in darkness, we must prepare to safeguard this great and rich country and our beloved way of life.

Now of all times is no time for political quibbling, for the airing of petty differences, for the feeding of hatreds and jealousies. It is a time for concerted patriotic action. Americans all, we must put our shoulders to the wheel and move forward with determination and in unison until the goal of preparedness has been attained. We must be ready when the enemy hordes come thundering at our shores.

Rural Electrification

EXTENSION OF REMARKS
OF
HON. CHARLES HAWKS, JR.
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Monday, June 3, 1940

Mr. HAWKS. Mr. Speaker, the following table shows the distribution of public funds in the development of the Rural Electrification Administration:

Net allotments, by States, according to fiscal funds, as of Feb. 8, 1940

States	1935-36	1936-37	1937-38	1938-39	1939-40	Total
United States	$14,165,128	$46,499,331	$29,936,586	$139,923,556	$38,872,192	$269,396,793
Alabama	65,000	1,058,000	451,350	2,928,646	973,554	5,476,550
Arizona		145,000		433,000	125,000	703,000
Arkansas		592,000	1,205,000	3,015,500	991,000	5,803,500
California		1,200,000	310,500	226,000	67,000	1,803,500
Colorado	140,000	255,000	567,500	1,952,000	512,500	3,427,000
Delaware		405,000	5,000	468,000		878,000
Florida	164,500	70,092	545,000	780,000	274,408	1,834,000
Georgia	763,200	1,618,915	1,327,500	7,511,000	2,689,000	13,889,615
Idaho	89,750	599,000	587,000	933,000	337,000	2,545,750
Illinois	141,500	1,957,000	949,130	9,389,500	2,515,000	14,952,130
Indiana	1,426,926	3,251,000	1,409,769	8,686,500	2,381,000	17,155,195
Iowa	537,616	3,291,712	1,984,000	9,383,300	2,624,000	17,830,628
Kansas	0	664,651	1,035,000	3,518,995	542,505	5,761,151
Kentucky	261,700	1,120,000	1,014,600	5,125,420	1,137,000	8,658,720
Louisiana	0	920,407	42,000	1,502,100	600,093	3,064,600
Maine	0	0	91,000	5,000	127,000	223,000
Maryland	0	172,689	106,184	357,816	111,311	748,000
Massachusetts	0	0	0	0	0	0
Michigan	0	2,845,000	1,810,000	6,071,000	526,500	11,252,500
Minnesota	1,461,000	3,179,954	1,809,282	9,151,500	2,580,500	18,182,236
Mississippi	81,000	795,700	896,500	4,898,670	1,274,330	7,946,200
Missouri	0	1,717,000	915,000	7,125,290	1,816,410	11,573,700
Montana	155,000	560,600	194,300	1,008,700	474,500	2,393,100
Nebraska	1,832,000	2,454,750	916,450	5,007,500	490,000	10,700,700
Nevada			173,000	49,000	5,000	227,000
New Hampshire		40,000		321,137	30,863	392,000
New Jersey		245,000	12,500	162,800		420,300
New Mexico		164,000	196,000	345,000	85,000	790,000
New York			250,000	1,125,000	370,000	1,745,000
North Carolina	335,250	565,000	536,100	3,625,000	1,158,000	6,219,350
North Dakota		500,000	206,704	900,268	382,000	1,988,972
Ohio	2,549,200	3,191,600	1,790,725	5,541,500	1,271,000	14,344,025
Oklahoma	70,000	1,716,000	594,000	3,479,000	765,000	6,624,000
Oregon		337,000	137,000	502,472	134,028	1,110,500
Pennsylvania	400,000	1,550,000	626,500	2,993,700	1,665,000	7,235,200
Rhode Island						
South Carolina	648,328	25,000	550,000	2,357,310	533,690	4,119,328
South Dakota	77,000	313,000	147,090	161,500	1,040,000	1,738,590
Tennessee	238,258	1,073,000	632,500	6,110,699	541,000	8,695,058
Texas	497,500	2,245,061	1,959,965	11,950,159	3,654,000	20,306,685
Utah			172,177	396,823	20,000	589,000
Vermont		25,000		185,000	70,500	280,500
Virginia	577,800	1,066,000	685,000	3,455,000	640,000	6,423,800
Washington	13,000	836,200	600,950	695,550	1,498,500	3,644,200
West Virginia		383,000	105,000	15,000	79,000	582,000
Wisconsin	1,539,600	2,897,000	1,936,200	5,410,000	1,626,000	13,408,800
Wyoming		454,000	448,500	663,300	154,000	1,719,800

NOTE.—Funds are listed according to fiscal years appropriated and not according to years actually allotted.

The rapidity with which these funds will be recovered will depend upon the prices obtained for farm products. Butter, with a 7-year average farm price of 26 cents per pound under the New Deal, and cheese, with a 7-year average New Deal price of 13.2 cents per pound, will make these payments rather slow. The people of this country should realize more and more that these moneys can be repaid only when and if the farmer receives more for his products than it costs him to produce them. Let us hope there are better days ahead for the farmers of this country.

National Defense and the Tax Burden

EXTENSION OF REMARKS
OF
HON. C. ARTHUR ANDERSON
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Monday, June 3, 1940

Mr. ANDERSON of Missouri. Mr. Speaker, in these days when war and carnage have brought about a state of mind that borders on hysteria even in this country, it is easy to lose sight of the fact that all of our domestic problems that we have sought so strenuously to solve for the past 8 years are still with us. The unemployed remain unemployed. The farmers must still be remembered by the Congress. The aged and infirm remain dependent to a great extent upon governmental assistance in some form. In short, the defense problem has served not to cure our ills but to increase their gravity. It, therefore, behooves us to maintain level heads in these days and proceed to the solution of our domestic problems as well as with the necessary defense measures.

Before we decided to strengthen the defenses of this Nation, we were perplexed no little by the ever-increasing tax burden. That burden is now, because of necessity, going to be more onerous. But in the true spirit of Americanism our people and our industries have agreed that additional taxes are inevitable so that we can be able to defend our sacred liberties if need be.

Not many years ago the Democratic administration brought about the rebirth of a great industry, which gives employment to millions and provides billions in revenue. I refer to the brewing industry. Yet, this industry, which suffered almost complete annihilation for more than a decade

and only within the last few years has had a chance to get its head above water, has taken the lead in assuming the responsibility for its proportionate share of the defense program.

One of the world's greatest breweries, Anheuser-Busch, is located in the district I have the honor to represent. Several days ago its president issued a statement in which he called upon the Congress to be considerate of this great industry when assessing new taxes and yet he willingly assumed the urgent necessity to accept new taxes for the purpose of defending this great land of ours. In connection with this statement I ask leave to include a brief editorial from the St. Louis Post-Dispatch of June 1, 1940.

WILLING TAXPAYERS

So thoroughly are the American people convinced of the need for stronger national defense that a majority of them seem ready to pay willingly the additional taxes required for this purpose. This fine attitude seems to have taken the administration rather by surprise, for Mr. Roosevelt's first statements evaded the matter of paying the bill by leaving the procedure up to Congress and suggesting an increased debt limit as the way out. Not until after messages of cooperation began deluging the White House was increased taxation, usually a taboo subject in an election year, put on the agenda.

An admirable expression of the prevailing feeling comes from a St. Louis firm, Anheuser-Busch, Inc. Through its president, Adolphus Busch III, the company states its readiness to pay the proposed additional $1-per-barrel Federal tax on beer. "The preparedness program proposed by the President transcends all other considerations," Mr. Busch says. "We stand ready to bear our fair share of any taxes imposed to meet this emergency."

This statement, we believe, speaks for the great majority of American businessmen and private citizens. In the face of the Nation's need, paying taxes for defense becomes a patriotic duty. The taxpayers' eager cooperation does not mean their vigilance over how the money is spent will be relaxed, however. On the contrary, it makes all the greater the Government's duty of making its defense investment wisely.

Asleep at the Switch

EXTENSION OF REMARKS

OF

HON. BENJAMIN JARRETT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 3, 1940

EDITORIAL FROM THE OIL CITY (PA.) DERRICK

Mr. JARRETT. Mr. Speaker, after over 7 years of being asleep and wildly expending the resources of the country we are now to vote and increase the national debt by $4,200,000,000. It is for us now to buckle down, get to work along the lines of America first. My hope is that it is not too late. The following editorial from the Oil City Derrick, Oil City, Pa., expressed my views:

[From the Oil City (Pa.) Derrick of May 31, 1940]

ASLEEP AT THE SWITCH

We agree with Governor James in his Memorial Day address at the national cemetery in Gettysburg that if the vast sums spent by the Government on unemployment had been devoted to building up our defenses, and especially our highways which are all-important in case of war, there would not be so many idle workers, and the country would not be in the defenseless position it is today.

Now that Hitler has struck, the manner in which other nations have had their national virility sapped by economic agitators is becoming crystal clear.

A well-documented article in this week's Saturday Evening Post, written by W. G. Krivitsky, tells how cleverly the defeated German army generals, bent on vengeance started in, 20 years ago, to whip the "red" army of Russia into effective shape.

On the other hand the "reds" were working on the proletariat fringes in the democratic nations of Britain, France, and the United States, and organizing these volatile elements into forces determined to break down their economic structures. So much for Hitler's abuse of "red" Russia, which was purely window dressing. He and Stalin have long understood each other.

It is anything but a pretty story—this conspiracy on the part of the Reich to weaken the nations which defeated her in the World War and humiliated her through the Treaty of Versailles.

France was her chief victim. The "reds" as usual worked on the envy and hatred of the masses by organizing labor into a political force, by urging pacifism and sabotage and by diverting a large share of the national income from national defense into social security. Now the Allied army in Flanders is paying the penalty for the "red" regime of Leon Blum.

In England glib agitators elected to Parliament from the industrial sections for a time took over the reins of government.

The damage which has been done to the United States through the past 7 years of trying to establish the more abundant life may be expressed by the patent fact that not only are we now practically defenseless but we have wasted so much of our substance on social experiments that half of it would have provided us with the greatest Army and Navy in the world.

When the history of the second World War is written, German intrigue will be its most illuminating chapter. We see its operations now in the German-Russian alliance; in the easy manner in which Denmark, Norway, Holland, and Belgium were taken; in the actions of Quislings and Leopolds, and in the organization of those damnable "fifth columns," made up of spies and traitors.

Before England and France could deal with those subversive elements they had to abandon freedom and embrace dictatorships.

As yet we have no idea how far this red menace has wormed its way into our vitals, but we do know that with American industry, the backbone of our national defense, our principal industries have been harried and hamstrung through foolish laws foisted on the Nation by well-meaning but misguided New Dealers, who have not hesitated to change the complexion of our judiciary to make these laws stick.

Now that this social program has all but bankrupted the United States, we are facing the expenditure of other billions to save America for the American people. Let us hope that we are not starting too late.

This Memorial Day—Americans Should Give Thanks That We Are at Peace

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 3, 1940

Mr. MUNDT. Mr. Speaker, I was among those last week who deplored the fact that the leadership of the House failed to set aside at least an hour to respect the memory of American heroes who have given of their strength and courage in the wars which have molded this country into its present position of greatness. It seems to me that Congress is derelict in its duty when it sets aside a national patriotic day for the rest of the country to respect and then fails, itself, to recognize the debt of gratitude which we all owe to the heroic dead whose sacrifices have helped preserve this Republic.

I would not have had Congress take a holiday on Memorial Day during these trying times, but it would in no way have handicapped our activities or slowed down our legislative schedule to have set aside at least an hour to pay homage to the heroes of America. We could easily have met an hour earlier or adjourned an hour later in order to pay official recognition to Memorial Day and our entire omission of such recognition remains a black blot on the record of the current Congress.

NEEDED—A PATRIOTISM WHICH DOES NOT PENALIZE THE HEROES OF THE PAST AS IT FACES DANGERS OF THE FUTURE

Because it tells an impressive Memorial Day message and because it brings to us the refreshingly sane thinking of a great midwestern newspaperman, Fred C. Christopherson, of Sioux Falls, I have asked leave to reprint the following editorial from the Sioux Falls Daily Argus Leader of South Dakota. Its sincere tribute to the heroes of past wars is in striking contrast with the curious cash-at-any-price patriotism of some eastern seaboard newspapers which are now combining editorials attempting to involve America in the present war abroad with editorials criticizing this Congress because we recently passed a pension bill giving some small

measure of relief to the widows, orphans, and parents of the World War.

BAD TASTE IS ADDED TO BAD JUDGMENT

To my way of thinking, the warlike editors and columnists who would rush this country into another war, while at the same time expressing resentment that Congress has at long last voted some needed pension legislation, are adding bad taste to bad judgment, to the discredit of the papers they serve. I think it is bad judgment to try to plunge into a modern war 3,000 miles away a country so illy prepared that its soldiers would be mere suicide squads if shipped overseas to fight; and I think it is extremely bad taste for those big-money papers who now promote war to criticize this Congress for paying just one small part of its obligation to those who were drafted from farm and city to be offered as possible sacrifices in the World War. The least these present-day war salesmen could do, one would think, is to praise rather than pillory Congress for its efforts to make some amends to the soldiers and sailors of the last war and their families. Those eastern journalists who now advocate flirting with war should recognize and remember that the costs of war are great and that after any war for which a nation drafts its fighters it is axiomatic that pensions must follow to care for the human tragedies and the suffering which inevitably follow a modern conflict.

THIS MEMORIAL DAY—AN EDITORIAL

[From Sioux Falls Daily Argus-Leader, Sioux Falls, S. Dak.]

There is something tragic about this Memorial Day, something that seems disturbingly futile.

We pay honor to the dead of other wars. Meanwhile a horrible war in Europe is blasting the lives out of men, women, and children by the hundreds of thousands.

Satisfaction, of course, may be derived from the fact that Americans are not being numbered today among the victims of the slaughter.

If there is any profound resolution we should make as we pay homage today to the dead of other American wars, it is to use our every energy in striving to maintain peace in America.

The time may come when this is impossible. But let us make sure that whatever course we do follow is selected in calm thought and proper understanding.

We have had many years during which to reflect upon the horrors of the first World War. We have examined our mistakes. In a sober period of reflection, we concluded that we should refrain from participation in future European wars.

Before altering that decision, if we are to do so, we should ponder seriously, thoughtfully, and carefully upon the matter.

War today is more terrible than at any previous time in the history of the world. The inventive genius of man has been employed in the construction of death-dealing instruments of a scope far surpassing those available to the armies in earlier wars. It is entirely possible that most of Europe will be a shambles before the final shot is fired in the conflict now raging on the other side of the Atlantic.

Let us pause today and give thanks that we are at peace. Let us kneel before the graves of the soldiers of other wars now in their long sleep and pledge ourselves to preserve American peace at any reasonable price.

World Affairs

EXTENSION OF REMARKS

OF

HON. E. HAROLD CLUETT

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, June 3, 1940

ADDRESS BY RT. REV. G. ASHTON OLDHAM, D. D., S. T. D., BISHOP OF ALBANY

Mr. CLUETT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following excerpt from the address of the bishop of Albany at the annual convention, diocese of Albany, May 7, 1940:

This convention meets—as in all probability will the general convention—at a time of greatest political and national upheaval in all history. The very foundations of a civilization built up laboriously through the centuries are being shaken and the entire structure threatened with disaster. Some, perhaps much of it, ought to perish, based as it is on a pagan materialism and selfishness, and make way for something better. But the process is not a pleasant one and it fills us with dark forebodings and fears for the future. The whole drama is so vast and the issue so complicated and intertwined that the keenest intellects are unable to understand its full significance or provide unerring guidance. At times we feel utterly impotent and in the grip of forces which we can neither control nor direct.

In the midst of this chaos is the Christian Church; and, today, as is usual in times of trouble, people are turning to it with wistful hope as the only way out. And what is the church doing? Too often, alas, concerned with itself, drenched with self-regard, and even, sad to say, adding to the world's turmoil by its own petty bickerings within and without. In national and international affairs, we find its members mouthing the same shibboleths as the politicians, unable to see issues any more clearly or face them with any greater courage.

Not long ago I attended a large meeting in New York for consideration of our foreign policy. The speakers dealt with the subject from the standpoint of our material self-interest; but, during the question period, one man asked if there were not also involved issues of moral principle and whether that was not the most important consideration. The chairman replied by saying they had a bishop on the platform and, if anybody could address himself to such a question, he of all men should be able to do so; whereupon he called upon me, and my few remarks met with enthusiastic approval.

I cite this incident, not because of its personal bearing, but as an illustration of the uneasiness of mind of many people because moral issues are so much ignored in the consideration of the pressing world problems that confront us and as evidence that people naturally and rightly look to the church for light and guidance in the sphere of morals. This is the chief and often the only contribution the church has to make. We are not experts in diplomacy, nor are many of us sufficiently informed on these very complex subjects to be able to give any worth-while direction as to method. We should, however, be able to bring to bear our moral judgment and not be swept along on the tide of unreflective, superficial, and often dangerous cliches and slogans, which characterize much of our political thinking.

With this background, I ask you to consider several current slogans which appear to be accepted as axiomatic by multitudes of Americans without any reference to their moral content, for it is precisely here that clear thinking and guidance are needed.

And first, that word "neutrality," it is now used as a technical, legal device to keep us out of war. But note its literal meaning as given in the dictionary, as follows: "having no decided character, neither one thing nor the other, indifferent, indefinite, the state of being neither good nor bad"; and, as applied to a contest, it means being "friendly to each of the belligerents." Can Christians or men of any moral integrity consent to be so described? If neutrality means that we are indifferent to issues of right and wrong, that we make no distinction between godless, brutal, and rapacious governments and those who believe in liberty and justice, that we do not care how many little countries are overrun, how many thousands of innocent people are subject to the tortures of concentration camps or driven out of home and country to wander like wild beasts on the face of the earth—then it is an abhorrent thing—both in the eyes of all decent men and of God. "I would thou wert cold or hot," says the book of Revelation; "so because thou art lukewarm and neither cold nor hot, I will spew thee out of my mouth." One classic instance of neutrality we Christians know well, when an individual endeavored to avoid taking a stand and literally washed his hands of an unpleasant business; and for 2,000 years since the church has chanted in her worship, "crucified under Pontius Pilate." On a moral issue no Christian can be neutral except at the loss of his immortal soul.

Isolation, a favorite word in some quarters, is another device to keep us safe and sheltered. Instead of doing so, however, it increases and intensifies the disease it aims to cure. The chief cause of this war is an arrogant and selfish nationalism, which tends to divide the world into separate self-contained units. It is contrary to the whole trend of events and a defiance of the will of God. Science has knit the world into a closely interrelated and interdependent unity; and it can only be peaceful or prosperous as this fact is recognized. God made a sphere, not a hemisphere, and man is breaking it up into fragments. God made a human race, and man divides it into races and castes and classes and clans. Science has made the world a neighborhood, and it is the church's business to make it a brotherhood. Isolation and imperialism are twin brothers, as witness recent suggestions that we acquire surrounding islands for our protection, which is precisely the suggestion Russia made to Finland. Isolation, in short, is a dangerous anachronism, a deadly foe of peace, prosperity, and democracy, and utterly out of harmony with the Christian doctrine that God has made of one blood all nations of men on the face of the whole earth. It is an impossible concept for an intelligent Christian.

Both these words, neutrality and isolation, are distorted from their true meaning and drafted into the service of our most popular slogan, "Keep America out of war," a phrase that is

purely negative in character and devoid of all ethical content. Its dynamic is too often fear and selfishness, and these always vitiate the judgment. We can see the process of moral deterioration already at work. In order to justify a selfish and not overcourageous policy, we assert, despite overwhelming evidence, that no moral issues are at stake, that all are equally guilty and that the whole affair is none of our business. With each passing act of brutality and attack on liberty, we harden our hearts to human suffering, stifle our moral indignation and shout the louder, "A plague on both your houses." When one of our Congressmen can assert that this is simply a war between two gangsters, it shows the depths of intellectual blindness or moral obliquity to which we can descend. To make the avoidance of difficulty or suffering the sole guide and purpose of action is inadequate, unworthy, and of dubious morality.

To no one of these slogans, as popularly used, can the church give its approval. Instead, it must insist that our actions be based on the solid rock of moral principle, not on fear and selfishness, that we should be primarily concerned about righteousness, not safety. If we can better serve the world by staying out of war, that is a good and valid reason. But let us be honest and realistic as we assert it. The years since the last war do not evidence on our part any great desire to serve mankind, nor do most of the utterances of press and politicians today. As Christians, however, we can accept no lower motive. We are our brother's keeper. In God's sight, we have a duty not only to ourselves but to the world.

The total absence of any such thought in connection with the recent peace rallies of college students throughout the land constitutes them a most disturbing and disgusting spectacle. There were plenty of slogans such as "The Yanks are not coming," "Bury the dead," and "Keep the U. S. A. out of imperialistic wars," as if poor Finland, Denmark, and Norway were not among the finest examples of democracy to be found—but nowhere did I read a single reference to duty or morality or service or any honest attempt to face facts and realize the true nature of this conflict. The whole idea seemed to be: "We don't care anything about right or wrong, if only we can keep safe and comfortable." Such crass selfishness, intellectual blindness, and moral obtuseness in the rising college generation bodes ill for the country. These young people might do well to return to the classics and recall those noble lines in Juvenal's Eighth Satire, in English paraphrase, as follows:

> "Count it a baseness if your soul prefer
> Safety to that which honor asks of her;
> And hold it manly life itself to give
> Rather than lose the things for which we live."

Or they might turn to a leader of our own land, the late Theodore Roosevelt, who said: "Only by putting honor and duty ahead of safety shall we stand erect before the world, high of heart and the master of our own souls."

All of which does not mean that I want America to go to war or that I have in any degree changed my attitude on this subject. I loathe war with all my soul and ardently look forward to the day when this curse of mankind will be banished from the earth—not merely from America. Some years ago I wrote a pamphlet suggesting that our aim should be, "Not keep America out of war but keep war out of the world"; and with others I have persistently endeavored to have our Nation do its part to this end—but in vain. Had this Nation or the Christian church taken this matter seriously years ago, had we thrown ourselves ardently and thoroughly into the effort to build a peaceful world, the result might be different today. Peace is indivisible. To be sure of it anywhere, it must be everywhere; and both our Christian duty and sound policy require that we cooperate with all peace-loving nations of the world as the only road to enduring peace.

My own conception of a Christian attitude for our country was set forth in an utterance of mine which has had very wide circulation and is familiar to most of you under the caption "America first," and reads as follows:

"AMERICA FIRST

"Not merely in matters material, but in things of the spirit.

"Not merely in science, inventions, motors and skyscrapers, but also in ideals, principles, character.

"Not merely in the calm assertion of rights, but in the glad assumption of duties.

"Not flaunting her strength as a giant, but bending in helpfulness over a sick and wounded world like a Good Samaritan.

"Not in splendid isolation, but in courageous cooperation.

"Not in pride, arrogance, and disdain of other races and peoples, but in sympathy, love, and understanding.

"Not in treading again the old, worn, bloody pathway which ends inevitably in chaos and disaster, but in blazing a new trail, along which, please God, other nations will follow, into the New Jerusalem, where wars shall be no more.

"Some day some nation must take this path—unless we are to lapse once again into utter barbarism—and that honor I covet for my beloved America.

"And so, in that spirit and with these hopes, I say with all my heart and soul, 'America first.'"

This was written 16 years ago, and I see no reason to change a single word.

Today countries which hated and dreaded and tried to avoid war as much as ourselves are being sacrificed over there—Czechoslovakia, Poland, Austria, Finland, Denmark, Norway, and others to come—human beings are suffering agony and death that we may enjoy safety and security. Can we without shame accept the benefits of such sacrifice without giving some equivalent? Surely it calls for something more than complacent aloofness or selling for cash. We must match their sacrifice with our own, not necessarily in physical agony and death, but at least in moral and spiritual agony, and a determination at any cost to render equivalent service to mankind. It may be God's will that we stay out of this war. I am sure it is His will that we should more effectively use our predominant power to curb aggression and help to make this world safe for small nations; and I, for one, am deeply grateful for our President's strong words in this connection. How this can best be done is for statesmen to determine; but Christians must never forget that God has a purpose for nations as for individuals, and it is of the utmost importance that we discern and follow that purpose. If sincerely and without thought of consequences we as a nation honestly endeavor to do God's will, the way will be made clear. "In His will is our peace."

The University of Maine, Yesterday, Today, and Tomorrow

EXTENSION OF REMARKS

OF

HON. RALPH O. BREWSTER

OF MAINE

IN THE HOUSE OF REPRESENTATIVES

Monday, June 3, 1940

ADDRESS OF HON. RALPH O. BREWSTER, OF MAINE

Mr. BREWSTER. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following address I made:

America has been sailing in the doldrums. The American spirit has been temporarily depressed. People are passing through another wilderness of doubt. They ask, Are we really going on or has America passed its prime? Such questionings simply indicate that America is still a thing of growth. We are gathering our resources once again to move ahead.

In this new day that is about to dawn the University of Maine is likely to play an increasingly important role. Both in education and research there may well be greatly increased demands.

EDUCATION IN AMERICA

Every generation in America has added 1 year to the formal education of its youth. Four years of high school have become a commonplace of the American educational system in the last 100 years. Now we face the challenge of whether this popularizing of education shall continue and of what it shall consist.

The feeling of the futility of merely classical education for many of our youth has grown apace. Prudent fathers of ample means are today sending some of their children to trade schools.

Success in any field today is the result of highly specialized knowledge and the demands grow more and more exacting.

Technology and chemurgy are the ideas with which to conjure in the decade that lies ahead.

The other colleges in Maine are obviously not going to be able to assume any material increase in their enrollment because of the limitations under which they must carry on.

THE UNIVERSITY OF MAINE

All the old sense of educational rivalry has happily long since passed. The University of Maine is the obvious instrumentality through which any further expansion in our facilities for public education must come. Whether this will come through assembling more students at Orono or through the medium of extension centers through the State for preliminary training is a matter for educational evolution.

Let us remember there are more than 50,000 boys and girls in Maine of college age and less than 5,000 in our institutions of higher learning. Meanwhile it is interesting and profitable to recall the history of the university from its inception in 1865 under the encouragement of the Morrill Act.

GROWTH FROM SMALL BEGINNINGS

Contrast the early income of the college in 1876, when $7,104 from the Federal Government was added to $10,500 from the State with the peak of the State grant in 1929 when the State gave the university $658,272.50, now reduced this last year to $584,252.36. The Federal grant has grown steadily to the peak of $346,810.52, achieved this last year.

Every taxpayer in Maine is a sustaining member of the university, because of his annual contribution. Those of us who have

a degree from the university have a special responsibility to see that this is sympathetically understood. Tuition, meanwhile, has grown to the impressive annual amount of $332,252. The university now is one of the great business as well as educational institutions of the State with an annual budget in excess of $1,750,000.

FEDERAL AID—WHY NOT?

Centainly, critics of Federal aid will pause when they contemplate the good that has been accomplished for Maine youth in three-quarters of a century by the $6,341,610.78 received from the Federal Government in that period by the University of Maine. It is amazing and amusing sometimes to find some of the severest critics of Federal aid among those who have received a part of their education as a result of Federal aid.

Technical training in ever-broadening fields is obviously to be required in the mechanized civilization of tomorrow.

America is going into high gear again and start ahead.

The great field house and athletic field of the university stand as monuments to the devotion of its graduates. Soon the new library will mark another milestone in the evolution of its service to the State of Maine.

The field of research is as yet but scratched. Maine must not be left behind the procession in the modern marvels of chemurgy. Much has been done but much more is to come.

PROGRESS IS THE SPIRIT OF AMERICA

Yankee ingenuity is still called to meet the challenge of these changing times.

Soon recovery will be here. That will mean opportunity for our youth. Training for life streamlined to accommodate the dynamics of the modern tempo will be imperatively required. We must begin to think and plan not in terms of today but of tomorrow that will so soon be here.

The future rushes on us and must not find America and particularly its youth unprepared. In the universities and colleges of the present there is being born the world of tomorrow.

Cooperation of all agencies, public and private, State and Federal, will be the guaranty that America will continue as an example of the significance of universal education in the evolution of a more ordered world.

Senator Reed's Testimony on the National Labor Relations Board

EXTENSION OF REMARKS

OF

HON. HARRY N. ROUTZOHN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, June 3, 1940

Mr. ROUTZOHN. Mr. Speaker, on the 4th day of May, last, the Honorable James A. Reed, the gifted and distinguished gentleman from Missouri who for many years served his country so faithfully and well in the Senate of the United States, appeared as a witness before the committee charged with the investigation of the National Labor Relations Board.

I wish I had the time to read to my colleagues his evidence—evidence of extra-legal and abominable conduct on the part of the Labor Board members and their staff of employees. However, I can merely refer my colleagues to his evidence as reported in the verbatim record of the committee hearings.

At the conclusion of his testimony, Edmund M. Toland, able general counsel to the committee, realizing that the committee and the country could profit by the sage advice of Senator Reed, elicited from him a clear and succinct appraisal of the committee's proposed amendments to the National Labor Relations Act. I quote this statement, knowing that it will be helpful to all of my colleagues who desire to give further consideration to the aforesaid amendments on the eve of their presentation to the House:

Mr. TOLAND. Based upon your years in public life, based upon your service in the House of Congress, in the Senate of the United States, based upon your long years as a member of the bar of the State of Missouri and the State and Supreme Court of the United States, will you be good enough to give the committee your opinion as to what you think, if any, are the defects in the present act, in the operation of the act by the Board, and what amendments, if any, you think the Congress of the United States should enact?

Mr. REED. That is a pretty large order. In my opinion, with reference to the way this present law has been administered is pretty well illustrated by the report of the majority of this committee. I would like to deal with that question first before coming to the other question.

I have practiced law for over 50 years, pretty actively and in many courts. I claim no superior intelligence or learning beyond that of any reasonably competent lawyer. And I shall try and make my statements as moderate as I can, because in this present hearing I have an interest, but the observations I am going to make now I make as a citizen, and I would make them if I had never heard of this case.

I have never read in my life anywhere such a catalog of improper, unjudicial, unfair rulings and acts as are set forth in this report.

If one-tenth part of the report is true, this Labor Board ought to be abolished overnight, and some kind of tribunal, if one is to exist, set up with proper safeguards for the right of litigants. I read in this report that this Board, supposedly a semijudicial body and clothed with powers in many respects, or in some respects, greater than the courts of justice possess, institutes boycotts against manufacturers, and that even before that manufacturing company has had a hearing before the Board, a process of condemnation without a hearing, and, then, a resort to a punishment which is not within the purview of the Board, for nowhere is it stated in this Wagner Act or in the Norris-LaGuardia Act that it is any part of the business or authority of the Board to attack a business by trying to take away its customers. The punishment it can impose are not to boycott and destroy a business but to prevent some particular wrong or injury.

Now, a man that will do that, a board that will do that thing, furnishes the indubitable evidence that it is prejudiced, that it is controlled by ulterior and vindictive motives, and that it is utterly unfit to sit as a tribunal anywhere under the American flag.

It is the kind of thing that is resorted to by racketeers who come to a man and demand certain compensation or money, and tell him, if he does not give it they will destroy his business, they will not permit him to sell his goods, wares, or industry. It is on a parallel, and a board that will do things of this kind ought to be inducted into the racketeers' union, if one exists.

They write a letter to Filene Store, of Boston, a very large store, in which they attack the Berkshire Mills Co., and ask the Filene Co. to bring pressure upon the Berkshire Co. Pressure for what? Manifestly, pressure to make them yield to the demands of some union. Now, here is a concern, let us take this for a moment, I have learned a little about merchandising, not much, but here is a concern that has to plan its business, buy its goods, its raw materials, employ its labor, incur overhead, and it must have customers, and when you can take away from it important customers you destroy that business, you put it into bankruptcy, you turn its labor out of employment. Here is a Board supposed to represent the United States and the justice and majesty of our laws resorting to methods of that kind.

Well, here is the firm of Weiss & Klans Co. They were engaged in business which made it desirable for them to get Government contracts, and efforts are being made to blacklist that company so that it can't get Government contracts, although it is not only entitled to get them if it bids properly but it is to the advantage of the Federal Government and the people of the United States that they should get them, if they are the lowest and best bidder. Now, this action is in no manner justified by any letter, line, or syllable of the law; it was purely an arbitrary act, and it goes to show how dangerous a thing it is to confer authority upon people who are willing to abuse it.

Here is another instance, and I am calling the attention to just a few. This is not news to the Board, but you have asked for my opinion and I am trying to give it to you in the mildest language I know how to employ.

We set up in this country an institution to loan money to companies that were in financial trouble. Why? Wholly a new thing in our governmental functions; but it is being done and largely, I think, approved because it was desirable that companies that were in financial difficulty might be tided over and not closed down, and not thereby destroy the opportunities of labor.

Well, the Board tried to have loans withheld from companies that have not been tried, so that they could go bankrupt because somebody had made an accusation against them. Now, this book is full of these things. This report ought to be read by every Member of Congress. It ought to be printed in every newspaper of the United States, in substance and effect. But we come to another thing that is charged here, and I take it upon substantial grounds, that they have taken the money of the people of the United States—your taxes and my taxes and everybody's taxes—and have been expending as much as $2,600 a month for attorneys to lobby with reference to amendments to this very measure that are now pending.

Well, when I was in the Senate, which was under a different regime than we have now, we were trying to pass laws to make it illegal to lobby. A lobbyist was supposed to be on the border line of a crook. That was the atmosphere we had at that time. That may not have been entirely right. Now we take the money of the people of the United States and hire a lot of lawyers to go over to the Capitol and try to prevent a change or alteration or an amendment to this bill.

That sort of thing is not only immoral but it is clearly illegal, and if the penalties of the law were visited as they should be, it would result in the removal from office of every one of these gentlemen who were party or privy to this infamous transaction.

Mr. ROUTZOHN. Does the Senator know that the Labor Board endeavors to justify its lobbying action with the excuse that all of the other bureaus do the same thing?

Mr. REED. I didn't have that information, although I have had a suspicion of that kind, and I think most of the people in the country had.

Mr. ROUTZOHN. That still doesn't make it right, though, does it, in your estimation?

Mr. REED. That is like one thief, excusing himself for stealing a horse, by saying somebody else stole a mule. If that is going on in this country, then—and I am not going into politics—if that is part of the New Deal, they had better perform a surgical operation and cut the cancer out.

I am not going to refer to other matters in this report. You have asked me for my opinion as to amendments. I would not want to undertake to give this committee a comprehensive analysis of this bill, but there are two or three things that, if they are not taken out of the law, will result in great wrong, and they have resulted in great wrong. The first thing that I think we ought to do is to make this bill appear not as a bill attacking everybody who has a business or an industry, but I think the preamble to the bill is very unfortunately drawn. It really is susceptible of the construction that it is a general indictment of all people who employ labor. That is a doctrine that is utterly untenable, and no such implication should be in any law. That, however, in my judgment, is not the most important thing, and I am only going to mention two or three things.

In the first place, the law ought to be changed so that any person put to trial must be tried in accordance with the rules of law and evidence. When you go outside of those rules which have been developed in the course of a thousand years of jurisprudence, you are absolutely certain to introduce into every controversy matters that are improper and that prejudice the cause of justice.

The next great question, in my judgment, is the weight to be given to evidence. To say that a court is to be bound by the decision of a board if there is any evidence to sustain it, is to say that justice may be outraged every day in the year. As Judge Otis says in his opinion, susceptible of the construction that if one witness swear in a certain way, and 20 swear the other way, the mere finding of the Board is conclusive upon the courts. That is to say your rights are not to be measured by the facts as they exist, but by a misconstruction of those facts by a board or tribunal. That certainly ought to come out of this law. There ought to be a clarification of the right and privileges of plant unions.

When I read the provision in the Wagner Act that the employees of a certain factory or institution could organize and that then it would be the duty of the employer to deal with them and with them alone, it seemed to me that that created a sort of a democracy in labor that would be very desirable. They would no longer be subject to attack by the greater organizations. Their rights would be secured and they could gain the protection of the law and of the courts. That ought to be made so plain that there can be no controversy about it in the future.

The act ought to be amended so that in any case, where the rights of a citizen are being outraged, that the jurisdiction of the courts should be restored so that those rights can be protected, and until you do that, you do not have the rule of law, but you have the rule of bureaus and bureaucracies that change overnight and that may rely for their decisions upon the prejudiced opinions of some underling.

But there is one thing in all this discussion that I want to say a word about, and that is the right of a citizen of the United States to express his opinion to any other citizen of the United States with reference to any subject or matter whatsoever, provided he does not, in the doing of that, in the expression of that opinion, impinge upon the rights of some other person, or the public. To say, as it is now being attempted, that an employer cannot talk to his employee, cannot express an opinion to his employee, cannot seek to persuade that employee not to join a labor union is to deny the right of free speech.

This right of free speech doesn't exist on behalf of the man who works at the lathe and denied to the man who may be his employer. The right of those two men to exchange their views, and to do it frankly and freely, without any limitation, must be preserved. Now that has nothing to do with coercion. If, in using his right to speak, an employer were to say to one of his employees, "If you dare to do this, that, or the other thing, I will discharge you," that is coercion, and properly can be forbidden by the law. But the mere right to make an argument, to present reasons, is of an entirely different character, and yet this Board and its subordinates have been holding to the doctrine that a man can't even talk to his employee.

Now, this right of free speech lies at the foundation of all our rights. As was said by a learned judge, the right to think is of very little value if you cannot express your thoughts.

The right of free speech is not limited by the public opinion of the day. The chief benefit of the right of free speech is that ideas shall be expressed which may be contrary to the general opinion of the day. Strike it down, limit it, qualify it in any way, and you have driven a dagger through the heart of the liberty of the people of this country. It is even more important than the liberty of the press, because the right to speak is a right which inheres in every being that is born, and he can exercise it; whereas the liberty of the press, of course, is more limited as an instrumentality for each individual, and I say, as Jefferson said, that I would rather live in a country where all the rights of the people were sought to be extinguished and preserve the liberty of the press than to preserve all other safeguards the law can create.

But the right of the individual, the right of the man who works for me (and I don't mean I have employees except in my office) to come to me with his requests, and my right to go to him and suggest things that I think ought to be done, those two rights must be preserved in this country, and if they are not preserved, if this doctrine of freedom of speech is ever circumscribed or cut down, the people that will first feel the deadly effect will be the people who work with their hands and their brains for a living.

Because always in the end of life and in the end of experience, the man who is without much money and who is obliged to rely upon his daily effort for his living is the first man that feels the effect of oppression, and oppression's greatest enemy is freedom of speech, and liberty, and of the press. Civilization's greatest friend is the free exchange of ideas, and no Congress and no legislative body has any right to say that because a man works for another, they cannot discuss their mutual business and affairs.

Now, gentlemen, I have taken too much of your time. You gave me a large order and I have tried to do what I can about it. I thank you very much.

The Danger of Hysteria

EXTENSION OF REMARKS
OF
HON. FRANK B. KEEFE
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, June 3, 1940

EDITORIAL FROM THE CHILTON (WIS.) TIMES-JOURNAL

Mr. KEEFE. Mr. Speaker, in these days of hysteria, it is reassuring to note the attitude of many editors throughout the country who are bending their efforts to try to keep the thought of the people of America in orderly and rational channels.

Mr. William J. McHale, editor of the Chilton Times-Journal at Chilton, Wis., in an editorial published on May 30, 1940, very clearly reflects the danger of hysteria, and I am pleased to incorporate this editorial in the RECORD in order that the people of the country may have the benefit of his splendid thoughts on this subject.

[From the Chilton (Wis.) Times-Journal of May 30, 1940]

THE DANGER OF HYSTERIA

As the threat of war comes closer to America, and particularly as we become acutely aware of the magnitude of the Nazi war machine and the new terrifying devices and methods it employs, aversion for the Nazi creed mounts in this country. This aversion is magnified by the dreadful stories of suffering, hardship, and death among the millions of refugees which are streaming out of the invaded neutral countries. It is one of the greatest, most heart-rending, and pathetic mass migrations of history. The stories of "fifth columnists," those spies and traitors of the new technique and, above all, the diabolical parachutists that are dropped from the skies to murder, burn, and destroy behind the lines, fill us with loathing for the modern methods of "total war."

There are indications that the reaction to the war news in some parts of this and other American countries is inclining to place under suspicion all persons of German birth or extraction. That attitude is likely to become more general if the hysteria increases. It is an attitude which should be avoided and suppressed because it is as unfair as the things it condemns.

Nazi-ism, fascism, and communism are all fanatical ideologies, beliefs in which rabid leaders work their followers up to a pitch of religious devotion. They are all basically godless, because to survive they must do away with all opposition. The dictators set themselves up as the subjects of worship, the gods of the new paganism. Their appeal is principally to the young whose bodies and minds can be molded most readily to the pattern set by the leaders. Those who do not believe have the choice of silent submission or a prison camp, or worse. Opposition is suppressed ruthlessly. The successful dictator must stand ready to play the role of a mass murderer, and often does, to enforce submission.

The people of Germany are intrinsically no more cruel or murderous than the people of any other nation. Among them will be found as much kindness, sympathy, charity, and benevolence as among the people of any other country. Those qualities are not the exclusive possession of any race or nation. Nazi-ism is the inspiration of a leader that exalted nationalism and "raceism" as a creed. He came upon the scene at a critical time in German history when there were millions of people ready to listen to anyone who could, with some show of reason, hold out hope for better things. He gained recruits, just as fanatics in this country can

gain recruits for almost any cause. The Ku Klux Klan is a current example of the ability of leadership to win a following. Nazism, like klanism, is a rabid idea and not a racial characteristic.

So, if war hysteria should deepen, we should guard against the fallacy that because a man is an Italian he is a potential Fascist or because he is a German he is at heart a Nazi. It does not follow that all members of a nationality accept as their own all the ideas of a leader of that nationality. As Americans we have a way of disagreeing violently with our political leaders.

It is a safe guess that the vast majority of Americans of German and Italian birth and extraction in this country would shed their blood as freely and willingly for American democracy as would any other section of our population. In spying out "fifth columnists," traitors, and spies in this country, therefore, simple justice to the members of our many nationalities requires that hate and hysteria be not permitted to confuse un-American idealogies with nationalities. We will probably find as large a proportion of "fifth column" candidates among our college and university students and faculties, who claim Mayflower lineage, as we will among American citizens of German extraction.

The Gods of Valhalla

EXTENSION OF REMARKS

OF

HON. LEWIS D. THILL

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, June 3, 1940

ORATION BY PHIL W. GROSSMAN, JR.

Mr. THILL. Mr. Speaker, under leave to extend my remarks, I include the following oration entitled "The Gods of Valhalla," by Phil W. Grossman, Jr., Marquette University School of Law, Milwaukee, Wis.

This oration won the first prize for the State of Wisconsin in the Seabury National Peace Oratorical Contest held at Milwaukee, Wis., on April 19, 1940. The prize which Mr. Grossman, as author and speaker, was awarded was $50 cash and the opportunity to enter the manuscript in the national contest to compete with orators from other States for an additional $500 award.

The contest is sponsored annually in nearly every State by the Misses Seabury, of Maine, who seek to encourage the discussion among American youth concerning the ways to peace among the nations of the world.

There is an ancient legend—a myth that the Norsemen used to believe—that tells a peculiar story. It is the story of the pagan god, Odin, king of the gods of Asgard. Now Odin, not unlike earthly rulers subsequent to himself, had a plan—a plan to make secure his power by defeating some day—he didn't know when—the great giants who roamed through his particular heaven. To do this he needed men—fighting men—men who knew not a fear. So he summoned to his castle the souls of the bravest warriors who had been slain in earthly battles and there they would enter the ranks of the soldiers who were preparing to move against the giants; all of them receiving the promise from Odin that when each battle was completed they would return to the castle, and, by feasting in the great hall, would recover from all of their wounds.

Because of their belief in this myth the Norsemen were not afraid of being killed at war. Anyone who died a peaceful death on earth was excluded from this legendary heaven. And so it was called Valhalla, the hall of the chosen slain.

Most of us today do not consider ourselves foolish enough to believe in such false gods or such mythical promises. But on the continent of Europe, ladies and gentlemen, we have seen in our lifetime the restoration of those very same gods to the castle of Valhalla. For 7 years 60,000,000 middle Europeans have been beating their plowshares into swords because Hitler promises them that some day the "giants" will be destroyed and the great day for Aryanism will at last be had—"Unify, strengthen, conquer, and some day you will feast at the table of 'Mittel Europa.'" The Germans believe in Valhalla.

We learn that in Fascist Japan every soldier is taught that he is fighting for the supremacy of a man whom he calls "god." And the words of that god are these, "War is the supreme holy enterprise of mankind. To die at war is the greatest glory and the height of exultation." The Japanese believe in Valhalla.

One hundred and sixty-five million Russians march at the crack of a whip. March into certain death, because above them is Stalinism, which has made those men automatons, parts in an international war machine. And that twentieth-century pagan god, seated on his throne in Moscow, promises them a new world order. The Russians believe in Valhalla.

In the year 1917 we were promised that if we marched across the seas with the light of democracy shining in our eyes we would be serving the cause of peace and, incidentally, the cause of the "giants." We would fight—and 126,000 of us would die—in a war to end all wars. We, and the people of France, and the people of Great Britain were promised peace after the victory. That victory was attained, but there has been no peace. The conquerors believed that they had made secure their power by crushing an imperialistic Germany, robbing her and excluding her from the "heaven" of the democracies. Today the pendulum of power has swung the other way as the defeated one seeks revenge against the "giants" by calling out the armies of its people once again. And again the people of France and the people of Great Britain are fighting and dying because they are promised peace after victory, just as their fathers before them were promised peace after victory. They, too, believe in Valhalla.

Today you and I are wondering about the answer to just one question: "Why?" Why, in the name of peace, will nation fight nation, down to the last red drop of human blood, and down to the last faded shred of the human dream for a world without hate? Why? Because they are afraid; just as the Norse god, Odin, was afraid. They are afraid of losing their power, and in being afraid—they have lost peace. Hitler has written into Mein Kampf two alternatives viewed by today's governments as the only possibilities of national destiny. Views which are making, and always have made—war. In Mein Kampf he says, "Germany will be the world power, or Germany will be nothing at all." And because nobody wants to be "nothing at all," he proceeds to set up a system of guaranties to his people that Germany will be a world power. In this Valhallalike plan there is no room for compromise, no room for prosperity of the world community—only room for pure German supremacy.

The situation in the Orient is similar. The Japanese must be supreme in power. They, too, believe in only two possibilities for their small but ambitious state. It is to be "Japan over Asia or no Japan at all."

Returning to Russia. The Soviet objective is to sow seeds of communism in all nations. This can be done, Stalin claims, when they are weak and helpless as a result of wars between one and another. That is Russia's way to national supremacy.

The people in the democracies, on the other hand, receive no more satisfactory an answer when they demand of their governments a reply to the question, "What are we fighting for?" Great Britain's Prime Minister said, just a short while ago, "Our war aim can be stated very briefly. It is to defeat our enemy. And by that I do not mean merely the defeat of the enemy's military forces; I mean the defeat of the aggressive bullying quality which seeks to dominate other people by force."

And Winston Churchill follows with a ringing speech in which he presumes to foresee the coming of the European heaven of peace when he says, "The day will come when joy bells will ring again throughout Europe, and victorious nations, master of their foes and of themselves, will plan and build again in justice and tradition and in freedom a house of many mansions where there will be room for all." But I submit, ladies and gentlemen, that under present circumstances those are but idle words. Is there, for example, freedom in the kind of a victory which seeks the destruction of a nation? For the Allies have gone on record, by both word and act, to blot out not only Hitlerism but everything that constitutes a threat to their power politics in the western world. Can we expect justice from an empire like Great Britain, which with impunity breaks her contracts—her contract with Czechoslovakia, her contract with Poland, or her treaty with Norway, broken before the ink was dry? And if the peace is to be based on tradition, as Mr. Churchill pleads, then, indeed, do we have cause for pessimism. The Germans remember too well that at the last victor's peace in 1918, one from which they were excluded, Clemenceau, of France, walked into the Versailles conference with these words on his lips: "I don't care what kind of terms you make, so long as Germany is destroyed."

The democracies, as well, have always seen only two possibilities for their destiny; as expressed in the American book by Hamilton Fish Armstrong, which bears the title "We or They," their status is to be either that of a world power or that of nothing at all. The governments of twentieth-century nations have set themselves up as gods of modern Valhallas, blindly believing again that security will be had when they shall be victorious.

But the last chapter of our Nordic legend tells of the inevitable end. It is called Gotterdamerung—The Twilight of the Gods. They never quite succeeded in removing the giants from their heaven. Nor did the giants defeat the warriors. Contrary to all of Odin's promises, the soldiers, after one last fierce battle, passed into oblivion along with the enemy whom they had set out to destroy. It was then they learned that this was indeed no heaven, but the beginnings of hell.

Do you and I today believe in a Valhalla? Think. Do you believe that one last swoop of the democratic armies of the world will bring the kind of a peace men have dreamed of? Do you think that Germany and Russia on the one hand, or France and Britain on the other, will achieve peace whichever wins? The truth is that the most that war can do today is to determine, with a maximum of social disturbance and destruction and death, which contestant is in a position to dictate its terms. That is the folly of war. There lies the problem. I have indicated the solution—a peace, without

a victory. That means a peace pact reached by arbitration among equals and not the traditional treaty dictated by victors to vanquished. A Versailles at which will be present someone—though God grant that there be more than one—who will establish the renaissance the rebirth of the one great peace formula of all times that shall sweep away all of the myths, and impress in the minds of today's leaders the wisdom of a Christian peace. The conclusion of the present chaos can be had by recognizing that peace is not synonymous with supremacy; that national, and consequently, world prosperity—and security, too—never has been had, and never will be had without the recognition of the rights of each nation—the right to live happily and peacefully in a society planned to work by the magnificent realization of the Christian brotherhood of men of every country under the one God who made them all. That realization is the first step. But it is the essential step.

The choice left to the world is clear. It is the choice of Christianity—or war. The Christian method has never failed. It is men who have failed. That plan will work if men will seek it out, follow it, grasp and hold it. For it alone is the answer to the puzzled cry that comes from the lips of all races and echoes around the globe—"Where is our peace? We have fought for it hard and long." And the answer comes back from the ages—"All of you have been fighting, each for your own little Valhalla. And because there is no Valhalla, after all your destruction, you've never had your peace. Send those myths vanishing with the last vanishing smoke of your gunfire and make the world again the world that the One Christian God gave you the power to make of it."

It is the old, old doctrine of Christian charity. But, ladies and gentlemen, it is common sense.

Lessons From the World War

EXTENSION OF REMARKS

OF

HON. ABE MURDOCK

OF UTAH

IN THE HOUSE OF REPRESENTATIVES

Monday, June 3, 1940

EXCERPTS FROM SPEECHES OF J. WARREN MADDEN, CHAIRMAN, NATIONAL LABOR RELATIONS BOARD

Mr. MURDOCK of Utah. Mr. Speaker, last week the convention in New York of one of the great independent labor organizations, the International Ladies Garment Workers' Union, warmly applauded advice given them by a guest speaker in regard to the part labor should play in preparing our national defense. Drawing upon the lessons learned about efficient, large-scale production during the first World War, the speaker recited the successful effort the Nation then used to insure a minimum of interruption to production through industrial strife, while at the same time preserving the rights of workingmen to have a place in the national counsels.

The accomplishments of the War Labor Board in 1918 provide a pattern which we may study with present profit. Because I find the viewpoint of the speaker at the Ladies Garment Workers' convention to be sound and instructive, and because of the important office he holds, I wish to include in the RECORD the timely remarks of J. Warren Madden, chairman of the National Labor Relations Board.

In the report of your officers I find that your union membership is three times as large today as it was during the first World War period. I also find that during the past 2 years you achieved the peaceful renewal of all your association contracts. From these two facts it appears that with your union at least there can be both an increase in organized strength and a decrease in resort to the strike weapon. I know of no reason why your experience cannot be duplicated in other industries.

During the first World War there was an almost complete lack of labor organization and contractual relations in the industries providing basic war materials. Even up to the year 1935 that same condition existed. Today we find the basic iron-and-steel-producing industry about three-quarters organized and with hundreds of effective contracts, most of which have been peaceably renewed more than once. Five years ago there was no such thing as a labor organization of the rubber industry. Today nearly 50,000 rubber workers are living under labor agreements. The same may be said of the great automotive industry and the electrical-equipment industry. In copper smelting and refining, among oil workers, in shipbuilding, and on the decks of ships workers who are essential to our national defense have learned to make their demands through representatives at the bargaining table.

In summation of the notable gains in industrial stability during the past 5 years let these two facts be placed close together: During the past winter there were 4,000,000 more organized workers than there were 5 years ago; also during the past winter, although organized workers were potentially twice as capable of enforcing demands through strikes, there were fewer strikes and fewer workers involved than during any winter since the depression year of 1932.

An objective survey of labor relations in the United States would reveal them to be more stable, more productive of efficiency, and better rooted in mutual understanding than they were in 1917 or than they were in 1935. Some of the same people who cried calamity at the assertion of employee rights 23 years ago and 5 years ago still continue their lamentation. Yet it is profoundly significant that opposition to collective bargaining as a principle has disappeared during the brief period of the lift of the Wagner Act. Employers have signed contracts and have discovered that they are more secure with them than without. Mutual responsibility for the good health of the common enterprise is supplanting mutual suspicion in thousands of American plants.

In the face of this obvious change for the better in industrial relations there are those who protest that the means are wrong, that because a law works it must be tampered with, in much the manner that a small boy itches to take apart a clock. They do say collective bargaining itself is wrong. They speak kindly of that procedure itself, and, indeed, the more recently they have come around to a pronounced faith in collective bargaining the more they protest that they are its only true friends and that they must preserve it from those who have had a part in getting it established and making it work.

What is taking place in Europe today has imposed an imperative necessity to prepare as one united people for national defense. In these preparations a sound employer-employee relationship is a keystone. It is fortunate, indeed, that 5 years ago that relationship was redefined in accordance with democratic principles. Today we face whatever lies ahead in confidence not only that collective bargaining is accepted national policy but also that the principle has had sufficient application during the past 5 years to justify our faith in it as the most practical method to keep management and men working together on amicable terms.

We know from experiences with defense preparations during the first World War what shop problems are likely to throw strains upon the employer-employee relationship. In addition to such workaday questions as seniority and individual grievances we may expect the emergency to pose large-scale problems of reemployment, apprentice training, shifts to new kinds of work, the speed up and adjustments in wages and hours to meet whatever fluctuations in prices there may be in store.

These issues will spring from the emergency, not from the design of any one group or class. They will be impersonal and practical issues, yet their solution lies with human beings whose interests will often be in conflict. Surely there will be an important place for the procedure of collective bargaining to assist in a smoothly operating production of national necessities under conditions equitable to all.

Labor pitched in with good will to abide by necessary rules during the comparable emergency of the first World War. Today, as an industrial nation, we are in a stronger position, through possession of the collective-bargaining practice, to make sensible and orderly determination of emergency problems.

In the trying days which are ahead, America will need, and will have, wise counsel to plan, and a united effort to execute its national program. Labor will have, as so important an interest must have, an important place at the counsel table. And, having participated in the planning, labor will, as every other American interest will, carry out its equitable part in our common effort. Of this there can be no rational doubt, and of this I have no doubt.

Unearned Increment

EXTENSION OF REMARKS

OF

HON. W. STERLING COLE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, June 3, 1940

ARTICLE BY DOROTHY THOMPSON

Mr. COLE of New York. Mr. Speaker, with the permission of the House, I am inserting in the RECORD an article by Dorothy Thompson appearing in the paper this morning in which it is emphasized that we must do something more than build up a vast armament program if we are to avert in America the philosophy of dictatorship and force which is now threatening to rule Europe and the greater part of the world. I commend it to the attention of every person who would preserve for America the rich heritage that is ours.

UNEARNED INCREMENT—TAKING OUR LIBERTIES FOR GRANTED

(By Dorothy Thompson)

I am not among those who think that we are threatened with an imminent invasion, either from Mars or from the Nazis. It is something quite different with which we are threatened—the complete collapse of the world of which we are an integral part, and the redistribution and reorganization of that world, socially, economically, politically, financially, and spiritually, in such a manner as will menace our institutions, our way of life, and our possibility of independent survival.

Readjustments that affect us radically, that will amount, in fact, to a revolution, will be made while we stand helplessly by, unable effectively to protest or effectively to intervene, waiting to take what we are given—and like it.

The question is not whether we should go to war. It is an idle question, because even if we should at this moment, we could not. In spite of the fact that this "blitzkrieg" against the whole existing order has been systematically and openly prepared for 7 years, it has been the fashion to demur at those who have harped upon it as a prime fact to be considered in the world today, and to call them panicky, war mongers, and hysterical.

Now, it seems to me the hysteria is in the other camp. The country is suddenly aware that we are in a planetary crisis, and that, in a world where only the possession of force can influence events, we are unarmed. At this moment, did we possess the force, we could probably influence, modify, or even determine the whole course of history without even using the force, as Hitler determined what is happening now, not in Holland but at Munich; not by war but by his ability to make it.

There is nothing surprising about what has happened except its speed. It has been coming inexorably—yesterday, and the day before yesterday, and the day before that—this spring, and last spring, and the spring before that—and we were unarmed then, too. And many of the voices now raised in panic and denunciation of our unpreparedness are precisely the ones who have tried hardest in the past to convince the Nation that there was no cause for alarm.

What we need now is not panic, not denunciation, not unconsidered action, but awakening, analysis, and preparation—not for any eventuality but for the most likely eventualities. And part of this preparation must begin with a ruthless and unsparing self-criticism.

The balance sheet of history is mercilessly exact. Hitler's armies are battering down frontiers, armies, peoples, institutions, and a whole world, because that world has offered itself to this fate. For years it has presented such a spectacle of degeneration and decline as to invite the scourge.

We are threatened from without only because we have become weak within. That weakness is not primarily in lack of arms nor in the nefarious work of "fifth columns." The latter merely exploit our weakness—and criminals and gangsters were exploiting it long before "fifth columns" were ever formed. And then there was not a self-confessed rapist or murderer but could find some respectable lawyer to plead his case.

We have been living for a generation on unearned increment, wasting and abusing the liberties which our ancestors won for us in blood, mortgaging our children's patrimony to pay today's bills, which are our own.

Born in liberty, we have forgotten the stern fact of liberty—namely, that it involves the highest degree of personal and group responsibility. Freedom without responsibility means anarchy. When the President said, a week ago Sunday, that we do not need to abandon our democracy to match the strength of aggressors, he spoke the truth. We do not need to abandon it, but we do need to go back to it, to go back to its normal and intellectual foundations and build on them again.

Government by agitator-led masses is not American democracy. The concept that there is some sacred wisdom inherent in majorities, however ignorant, is not American democracy. The Congressman or Senator who is afraid to have a mind or his own and is unwilling to risk his political life for his convictions, reading his telegrams and studying the composition of organized groups before he can make up his mind about anything, is not a democratic statesman but merely a paid agent, and the agent, furthermore, of the most impulsive and easiest to stampede, and the movement articulately greedy and venal.

Everywhere power has been divorced from responsibility.

Our trade-unions have power without an ounce of responsibility for the productive process or for the community. Many of them are dictator-led at that. Their bosses can call strikes at their own will; they can make demands that close an industry and throw men into the streets; they resort to terror over their own members; they prevent management from exercising responsibility and do not even claim it for themselves. In behalf of labor they offend the very spirit of labor, undermining standards of work and divorcing remuneration from competency. The same, in other manifestations, holds true for industry, banking, and our intellectual life.

Profiteers are derided, in a world where profiteering is the characteristic of the day. If a banker, manufacturer, or speculator gyps or boycotts the community in the interest of heavier dividends, self-voted bonuses, and inflated profits, he is either denounced as a malefactor, or becomes an ambassador, depending upon his politics; and the while he is denounced he is emulated by the denouncers. For unearned increment has become the national dream. If you get it one way, you are a profiteer; if another, you are a contributor to "purchasing power."

Integrity, honesty, and noble passion are held up to ridicule. The independent personality is the butt of every cheap joke. Let a man emerge amongst us of truly superior quality and a thousand rats will begin gnawing at his legs to topple him down. If he is a poet, let him write one book inferior to himself and the jackals will howl with glee to proclaim him finished. Let him change his mind through the achievement of wisdom, and he will be called a renegade. A head that stands above the mass must expect to be removed.

To care about anything is to be quaintly ridiculous. Tolerance has been the watchword—that tolerance which comes of believing in nothing, loving nothing, hating nothing, the incapacity for indignation or enthusiasm, the paralysis of action—the tolerance which means that faith has gone out of the human heart and conviction out of the mind.

And this has nothing whatever to do with American democracy, which conceived a world in which personalities could emerge regardless of origin, and whose literature has exalted men and not masses.

We are weak because we have expended our savings and our substance, and mortgaged our future under a system by which those on the directors' board or in the polling booth try to vote themselves an "adequate" income, under the theory that they did not ask to be born, that the world owes them a living, and that fair remuneration is whatever the traffic will bear.

What we did from 1926 to 1929 on a world-wide scale, lending all over the world in order to create purchasing power regardless of assets—a policy which collapsed Europe and gave us Hitler—we have been doing since within our own border, and the results will be the same unless we change those ways.

We contemplate leading a hemisphere, when we cannot decently govern ourselves.

The degeneration of values and the lack of standards are what has made us spend billions without abolishing unemployment or slums or poverty. Instead of lifting the proletariat to a middle-class standard of living, we are pushing the middle classes into the proletariat. Instead of freeing the creative power of American industry under a joyful affirmation of its social responsibility and power, we are shackling it to an irresponsible bureaucracy, and under the guise of modifying capitalism are destroying all creative impulses.

Very soon we shall have to take a leading place in the world or a back seat. If it is to be the former, we must begin by making over ourselves and living in reality and not illusion. There is no cause for fear, but neither is there any cause for thinking that everything is just daisy.

The reality demands sacrificial devotion, intensely hard work by everycne, spiritual and intellectual conviction, and out of it the greatest happiness there is—that which comes of uncoerced dedication to a common and lofty cause.

Panic is the result of rude awakening from a false dream. The contemplation of reality is the beginning of creative courage and corporate salvation.

Air Defense and Our Highway Needs

EXTENSION OF REMARKS

OF

HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 3, 1940

Mr. RANDOLPH. Mr. Speaker, the House has acted wisely in passing promptly this afternoon the bill authorizing the continuance of our Federal Highway Act. In his appeal for adequate national defense, President Roosevelt warned us what to expect from any attempt to spread the war to the Western Hemisphere. From Norway, the President tells us, where aggressive armies hold strategic positions, it is only 8 flying hours to Greenland. Greenland is but 6¼ flying hours from Maine. According to these statistics, Maine would become one of our first defensive lines in the event of attack from that direction.

The movement of truck troops, mechanized forces, and supplies to this northeastern corner of our Nation would demand the best modern roads that our highway engineers can design and build. I say "would demand" because these motorways do not exist at the present time. Testimony presented before the House Roads Committee, of which I am a member, revealed that there are some 6,390 miles of highways in the New England States that should be rebuilt, widened, or relocated. There are also 506 bridges that should be widened or rebuilt. The total estimated cost of this contemplated reconstruction and improvement reaches $388,223,000. Reasons for these improvements are based on

immediate peacetime needs to better traffic conditions and promote highway safety.

Based on these called-for peacetime improvements, the cost of building New England's highways to serve the dual purpose of civil and military use would probably approximate $600,000,000. This necessary road construction in New England presents a staggering problem. As the Chief Executive pointed out, this highly industrialized region would be a first target for hostile forces. Therefore, it is highly important that highways in this area provide swift transportation for mobile antiaircraft batteries and other heavy, mechanized rapid-fire equipment.

PROBLEMS ARE WIDESPREAD

The problems of New England are similar to those of other sections of our country. In Georgia and the Carolinas, as well as in the State of Washington, facts and figures for needed highway improvements probably duplicate those of the Northeastern States. I mention Georgia and the Carolinas because they are the most accessible points for flights from Bermuda. These States are exactly 3½ hours from this British possession. With the exception of Canada, Bermuda is the nearest step to our front door. I have flown there from Baltimore in a little over 4 hours. In these States, as well as in the New England Commonwealths, modern highways that directly connect important supply bases with coast defenses are necessary factors in our preparedness.

From Tampico, Mexico, to St. Louis, in the very heart of the United States, is only 5½ flight hours' distance. Likewise, McCord, an important Army air base in the State of Washington, is but 7 hours from Alaska. These scattered points in all parts of our Nation are vulnerable. We can never maintain sufficient men and fighting equipment at these sections to insure their complete defense. Thus, we must depend upon our ability to quickly move additional men, equipment, and supplies to these points over the highway. It is imperative, therefore, that immediate steps be taken to overcome our road handicaps.

Some experts say that these improvements should be treated from the long-range standpoint, that we should approach them with the ease of a peacetime stride. I cannot agree with their sentiments in this respect. I do believe we should eliminate the elements of rush and reckless, emotional haste, but I emphasize the necessity for immediate but thorough action. It is quite obvious that our military leaders believe that America is closer now to warfare on her own soil than at any other time in its recent history. With reported activities of the "fifth column" in Mexico and elsewhere close at hand, it seems but a matter of time before Texas might become the locale of concentrated military activity. May God spare us this reality. But in the meantime, gentlemen, our wisdom dictates that we take stock of our highway deficiencies and begin a program that will modernize our national-road system and make it the finest for peacetime service and, at the same time, a highly developed and definitely efficient adjunct for our mechanized defense.

Our Greatest Danger Is the New Deal

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, June 3, 1940

Mr. HOFFMAN. Mr. Speaker, whether we agreed with President Wilson as to the advisability of entering the League of Nations, very few, if any, ever doubted that he believed sincerely and wholeheartedly in our constitutional form of government. We are willing to concede that after we entered the war, he personally, did his best to speed us on our way toward effective participation in that war. Nevertheless, the sad, sad fact is that billions of dollars were spent and comparatively little was accomplished.

The following editorial from the New York Herald Tribune of June 2, 1940, gives us a concise, though by no means complete, statement of what actually happened and of how we failed at that time. That editorial is as follows:

UNPREPAREDNESS IN 1917

The United States went to war with Germany on April 6, 1917. In December 1917—8 months later—we had 165,000 men in France, some of whom sailed without rifles and were totally devoid of artillery, airplanes, tanks, machine guns, trench mortars, and other munitions and supplies produced in the United States. Through 19 months Pershing fought our war abroad almost wholly from first to last with guns, munitions, airplanes, hand grenades, and materials either borrowed or bought from the Allies in Europe.

The Ordnance Department at Washington spent nearly $4,000,000,000 from April 1917 to June 1918 in an effort to build 20,000 guns of all calibers and equip them with munitions. The Civil War was fought for less. Despite this truly vast expenditure and effort, only 133 guns and 600 shells of a single caliber reached Pershing in time for use at the front.

The Allies had perfected an effective hand grenade. The War Department rejected this and placed orders for 20,000,000 distinctive American hand grenades. These, however, were too complicated, and Pershing bought hand grenades for our troops from the British.

We spent more than a billion dollars in our 1917–18 aviation effort. No American fighting plane ever reached the front. A few American-made observation planes appeared in France, and these were so badly constructed, clumsy, and dangerous that our flyers dubbed them "flaming coffins." The Allies had produced some good fighter planes and sought to turn over to us all plans for expeditious mass production. However, we rejected these planes which had come from the laboratory of actual war and decided to produce typically American motors and planes with wasteful result.

The War Department spent $116,000,000 on gas for our chemical warfare units in France, yet Pershing fired only gas bought from the Allies.

We built three picric acid plants and seven more plants to produce phenol required for picric, and all of these produced nothing for use in the war.

We built a powder plant at Nitro, W. Va., for $70,000,000; a plant at Nashville, Tenn., for $90,000,000, and nitrate plants at Sheffield, Ala.; Muscle Shoals, Ala; Toledo, Ohio; Perryville, Md.; and Cincinnati, Ohio, costing $116,000,000 and all of these produced not one pound of powder or nitrates for use in the war. After the war these plants were sold for a salvage value which was a crime against the American taxpayer.

The War Department planned for an army of 4,000,000 men and 86,000 horses. For these were ordered 41,000,000 pairs of Army shoes, 50,000 sets of double harness, 110,000 sets of single harness, 945,000 saddles, 2,800,000 halters, 1,500,000 horse brushes, 2,000,000 feed bags, 1,000,000 horse covers, and 195,000 copper branding irons. These figures are not hearsay; they were developed in the course of a Senate investigation of war preparations.

Railroads taken over by the Government in 1917 had been paying stockholders a billion dollars annually but the administration deficit at the end of 2 years was $1,350,000,000. The taxpayers received the deficit, stockholders nothing.

The Government spent about $1,200,000,000 on army cantonments for troops in training on the cost-plus plan by which the Government paid for all materials and labor, leaving efficiency and economy to contractors. These camps cost millions more than necessary in excess of labor and wasted materials.

About $50,000,000 was spent on spruce production for airplanes, yet 92.6 percent of all spruce used for this purpose was bought independently of the main project. Railroads to carry spruce lumber were built at a cost of about $10,000,000 and were not used.

Some of the port terminals built were never used.

It might be well for those who are assigned to the pressing job of rebuilding American armaments in 1940 and 1941 to extract from the Senate records and read the evidence taken by its investigating committee early in 1918 when charges were openly made that "the Military Establishment of the United States has fallen down" because of "inefficiency in every bureau and in every department of the United States." Senator Chamberlain, a Democratic member of the Senate investigating committee, made the above charges in a speech in New York and added, "I speak not as a Democrat but as a citizen of the United States."

Complacency, inefficiency, tardiness, laxity, gross favoritism to localities, and a policy of drift summed up the 1917–18 effort. It was the most hopeless disregard for the national pocketbook known prior to the New Deal.

We are now approaching a somewhat similar period in American history. A mighty effort at rearmament for national defense must be made. The American public will again want action, will undergo sacrifices to obtain action, but above all, it will demand capacity on the part of those who will be called to serve.

LET US NOT MAKE THE SAME MISTAKE AGAIN

A few days ago, with a second world war raging across the seas, grievous disasters having overtaken Great Britain and France, President Roosevelt appeared dramatically be-

fore Congress and the Nation and told us that our security was threatened; that we were in danger from invasion by a foreign power. He then asked, has since asked, and undoubtedly will hereafter ask, for billions of dollars to prepare for national defense. Congress has already voted billions of dollars for that purpose. It will vote other billions of dollars for a like purpose.

It is the duty of Congress to see that the waste and extravagance of the Wilson administration is not repeated by the present administration. We now know from the record made by President Roosevelt and his advisers over a period of more than 7 years that he is a waster and a spender; that, though he has been given billions of dollars to prepare our national defense, he has not prepared us for the condition which he now says confronts us.

We now know that he has failed to solve our domestic problems; that every year since he has been in office he has shoved us deeper and deeper into debt; that he has taken into, and permitted to remain, in the Federal service, those who have sympathized with and given aid to the Communists, who preach the overthrow of our Government by force; that his Secretary of the Interior, Ickes, has many times spoken to groups in which there was strong communistic influence; that the First Lady of the Land has entertained Communists in her home and has told us, in substance, that such action on her part was none of our business. That neither she nor Ickes have adequately denounced the Communists or their activities.

We know that until recently the President ridiculed and denounced the Dies Committee and its investigation.

With the foregoing in mind, it would seem that our first and our foremost duty in preparing this country to meet the enemies who may come from without, or the enemies who are working in our midst, would be to, at the first opportunity, which comes in November of this year, oust the President and all those who are dissatisfied with our constitutional form of government from offices which they occupy.

They failed us during the past 7 years; it is folly to trust them longer.

America Speeds Its Air-Expansion Program

EXTENSION OF REMARKS

OF

HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 3, 1940

Mr. RANDOLPH. Mr. Speaker, the Congress of the United States, and the people of the country generally, are thinking these days about speeding our national-defense program. There is need for emphasis on the strengthening of our air forces.

MUST REDOUBLE OUR EFFORTS

For many years, in the House of Representatives, I have called attention to our lack of air defense. I shall continue to do this because I am firmly of the conviction that we must redouble our efforts to speed the air-expansion program of the United States.

Informative articles are helpful on the subject matter and I call attention at this time to a splendid piece of writing in the Sunday Star of June 2, in which Richard L. Stokes builds a factual story about the situation confronting our Nation and its air-defense facilities. The author states:

EARLIER APPROPRIATIONS

For the period between June 30, 1932, and June 30, 1940, Congress allotted $399,853,642 to the Air Corps and $322,554,779 to the Bureau of Aeronautics—a total of $722,408,421. Large expenditures have been required for such projects as the construction of airfields and stations, and the maintenance, housing and schooling of pilots and mechanics.

In actual combat strength, the net result of this investment of three-quarters of a billion dollars is that at present the Army and Navy combined possess something like 2,707 fighting planes, of which 1,128 are rated as obsolete or obsolescent. The list includes all pursuit craft, all armed reconnaissance units, all light and medium bombers, flying fortresses, and flying boats, all tactical squadrons of Marine Corps and National Guard and the full air complement of all cruisers, battleships, and carriers.

Nearly three-fifths of the Army's 520 bombers consist of 300 medium planes of the B–18 type, which were purchased 3 years ago at $65,000 each, or $19,500,000. Maj. Gen. H. H. Arnold, Chief of the Air Corps, startled a Senate Appropriations Subcommittee on April 30 by observing that "if you take the B–18 today and send it against modern equipment it would be suicide." Already a decision has been reached to withdraw these 300 bombers from the first line and relegate them to training duty. Classified as obsolescent are all the Army's 168 light bombers and 160 of its 460 pursuit planes.

The pride of the Air Corps is its fleet of 52 heavy bombers, popularly known as flying fortresses. The flagship is the XB–15, an experimental craft which cost $250,000 and is described as the world's most powerful bomber. It was the first military plane ever built with complete living quarters. An all-metal ship with a wingspread of 150 feet, it has four engines of 1,000 horsepower each. An international record was set when it lifted 31,680 pounds—excluding its own weight of 30 tons and that of its gasoline load—to a height of 6,561 feet. A second distinction was a voyage to Santiago, Chile, 5,000 miles away, in 28 hours and 53 minutes of flying.

BOMBERS COST $185,000 EACH

The 51 other heavy bombers are of the B–17 type, costing $185,000 each, or a total of $9,435,000. They are all-metal monoplanes with four 1,000-horsepower motors, a wingspread of 105 feet, a weight of 22½ tons and a speed excelling 260 miles an hour. In addition to their own weight and that of gasoline, planes of this type have raised a load of 11,023 pounds to a height of 34,025 feet, carried an equal load 621.4 miles at a rate of 239 miles an hour and borne their crews, without cargo, on a 2,450-mile nonstop flight from Los Angeles to New York in 9 hours and 14 minutes and 30 seconds—an average of 265 miles an hour. Officers of the Air Corps contend that its flying fortresses excel all bombers in the vital elements of speed, miles of radius, and lifting power.

Mr. Stokes then goes on to point out that the situation has shaped itself so rapidly in recent weeks that—

Pilots and crews ordered to battle in any of these heavy bombers would find themselves at "a distinct disadvantage" if pitted against the latest developments of war in the air. This was acknowledged in so many words by General Arnold, who added, by way of emphasis, "There is no question about that." The handicap rises from the fact that they are not equipped with three up-to-date features—antileak tanks, armored pilot seats, and ordnance firing explosive shells. It is a lack shared at present by every plane in both Army and Navy, including the latter's bombing and fighting aircraft and the former's celebrated pursuit planes, which have made their mark in actual warfare, particularly with regard to maneuvering facility.

"We got off on the wrong track," General Arnold confessed, with the plea that Great Britain and France were equally taken by surprise. The awakening of the Air Corps began some months ago when the DO–17, a German bomber, was shot down in Scotland. To the astonishment of Allied engineers, the tank had kept its form instead of being smashed, as would have happened with a metal container. Though pierced by 30 bullets, it still held 80 gallons of gasoline.

LEAK-PROOF TANK MASTERED

Nazi scientists had mastered a task which the Air Corps undertook several years ago and then abandoned—the production of a leak-proof tank. The framework was stamped out of fiberboard. The walls consisted of a layer of crude, uncooked rubber between two layers of cured rubber, with an outside sheath of rawhide. When a bullet passed through, the uncooked rubber expanded and filled the hole.

Members of crews were found alive in other German bombers after they had been riddled with bullets and forced to earth. It was learned that the pilot seats were enclosed in light, thin armor of hardest steel, weighing no more than 126 pounds to a plane. There are reports of German pursuit craft which continued to operate though subjected to bursts of machine-gun fire. The pilots are thought to have been equipped with helmets, breastplates, and leg pieces of steel.

The most serious discovery was that on many of their combat planes the Nazis had supplemented or replaced machine guns with small-bore, rapid-fire cannon. The latter were aimed like machine guns through the noses of pursuit craft. But in the tails of bombers had been installed turreted wells, each with two cannon having a 120-degree cone of fire. Vessels thus equipped and flying in close formation, General Arnold explained, are able to give mutual support and keep interceptor craft at a respectful distance. "That is one reason," he commented, "why pursuit planes are not getting as many bombers in this war."

TWO HUNDRED 1-POUND SHELLS A MINUTE

All American military planes are at present armed with .30- and .50-caliber machine guns, in batteries, on the largest, of as many as nine. Each weapon discharges 800 bullets a minute. It was

proved in several instances that from 3,000 to 10,000 actual hits were needed to bring down an enemy bomber. One hit from a 37-millimeter cannon has often sufficed. Fed from an ammunition belt, this gun fires up to 200 one-pound shells a minute. Its range is probably no greater than that of the .50-caliber machine gun. But range is of small importance in air battle. The most effective attacks, it has been found, are made from distances centering around 250 yards.

Though beset with awkward difficulties of technique, the addition of armor and antileak tanks offers no insuperable problem. As hurriedly as possible, military and naval pursuit planes and bombers are being sent back to the shops for equipment with these two devices. But the change of ordnance is a redesign job, so deep-seated and costly that the Air Corps has decided to forego almost entirely any effort to regun its present battle fleet. Information on this point was withheld by the Navy.

For the future, however, both sea and land establishments promise that all tactical planes put in service will be provided with leakless tanks and armor, and that such a proportion of new bombing and pursuit craft as is deemed necessary will be equipped with shell-firing cannon.

SUGGESTED PROGRAMS VARY

Suggested programs vary between General Arnold's sober estimate of 20,000 planes by the end of 1941 and President Roosevelt's reiterated demand for facilities to produce 50,000 annually. The starting point of either project will of necessity be the current resources of the Government's two air-war services. Rigid accuracy is not claimed for all the statistics that ensue. When approximations are ventured they are the closest obtainable under official regulations.

On May 24 the Air Corps, in Regular Army and National Guard, possessed some 2,900 "useful" planes. The number on the same date for the Bureau of Aeronautics, including Regular Navy, Marine Corps, and Naval Reserve, was 1,813. This gives a total of 4,713 for both establishments.

NO WAR RESERVE OF PLANES

Neither service can at present muster a single plane by way of reserve against war. "Never have we been able," testified Admiral Towers, "to get enough money to accumulate a war reserve of planes." Of the Navy's armed air force, 679 planes are assigned to sea duty. There are 3 for each of 15 battleships, or 45; an average of 4 each on 37 light and heavy cruisers, or 148; and about 81 on each of 6 aircraft carriers, or 486. The Marine Corps has about 100 combat planes.

The Air Corps utilizes some 1,560 of its planes for transport, cargo, and training purposes. For similar functions the Navy employs 108 utility planes, 15 large and 9 small transports, 230 primary training planes, and 58 for advanced training.

The personnel of the Air Corps, according to recent tables, is 43,238 enlisted men, 2,142 Regular Army officers, 1,001 Reserve officers, and 1,542 flying cadets. It listed on May 1 rated pilots to the number of 1,988, 7 nonrated officers, 30 balloon pilots, 5 balloon observers, 105 nonrated students, and no parachute troops. The total of Reserve pilots available was given at 3,300.

The latest figures at hand on the Navy's air manpower are those of June 30, 1939, which may not have increased materially to date. At that time the Navy possessed a flying-duty personnel (pilots, observers, gunners, etc.), numbering 4,633; nonflying officers, 591, and enlisted men, 17,101. The total was 22,325. The Marine Corps had a flying-duty personnel of 491, 15 nonflying officers, and 856 enlisted men.

Every 6 weeks the Army graduates 200 pilots, with commissions as second lieutenants in the Air Reserve. Their course of 9 months begins with 3 months of instruction at 1 of 9 civilian flying schools, with a combined capacity of 396 cadets. Three months of post-graduate work follow at one of the Regular Army air bases.

EIGHT HUNDRED AND FIFTY IN TRAINING AT ONE TIME

In training at one time in the 11 flying schools are generally about 850 Army cadets. From the date of matriculation in the elementary term, it is calculated that 2 or 3 years are needed to make a first-class combat pilot. A possible reservoir of battle flyers is indicated by Robert H. Hinckley, Chairman of the Civil Aeronautics Authority, who told the National Aviation Forum here last week that the Authority's training program certified 10,000 civilian pilots during the past 12 months, at a rate of 30 a day; and can readily increase the number to several times 10,000 flyers in any year. They would require 1 or 2 years of added training for combat service.

I am in agreement with Mr. Stokes when he goes on to state that:

The present condition of war aviation in the United States illustrates the staggering task involved in any program of large and rapid expansion. It must occupy, in the nature of things, two primary fields. First comes the creation of new facilities for the production of material. Second is the enlistment and training of new flyers and ground crews.

SIXTY THOUSAND PLANES NEEDED

Concluding the very informative article, the writer says:

Accepting the computation that each plane requires 2 pilots and 10 men on the ground, the problem becomes one of recruiting 40,000 to 100,000 pilots and 200,000 to 500,000 enlisted aviation mechanics. It means the construction of 20,000 to 50,000 planes by an industry which is the least unprepared of the country's munitions trades; but which, according to high Air Corps officers, has attained even now, 9 months after the war began, a potential output of only 500 military planes a month, and can scarcely touch 800 before the end of the year, or as many as 1,250 earlier than February 1941.

NOT IMPRACTICABLE, THEY SAY

Even a goal of 50,000 planes is not impracticable, according to Army and Navy air chieftains and spokesmen of the aviation industry. The United States possesses the raw materials, manpower, engineering genius, industrial technique, and potential manufacturing plants. The efforts would monopolize one-seventh of the national income and a corresponding segment of the national energy. These are all factors which remain within the Republic's control.

Fighting the Enemy From Within

EXTENSION OF REMARKS

OF

HON. SAMUEL DICKSTEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, June 3, 1940

RADIO ADDRESS BY HON. SAMUEL DICKSTEIN, OF NEW YORK

Mr. DICKSTEIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by me June 1 over station WEAF entitled "Fighting the Enemy From Within":

The events of the last few weeks, and particularly the President's message on rearmament, has made it of the utmost importance that the public be thoroughly informed about the issues now confronting us.

Much is said, and much is written, about the menace of the "fifth column," without clearly defining what "fifth column" actually means. This term was invented by one of the men who fought with General Franco in Spain, to denote persons who, while not actually fighting, nevertheless sympathize with the invader. And so, in this country, there is no question that we find a large number of people who sympathize with our enemies, and give them aid and comfort. These sympathizers of the "fifth column" are not bold in asserting their views, and never proclaim to the world that they are enemies of our democracy. Some of them, while actually living under two flags, and having the protection of America, nevertheless not only fail in their allegiance to the United States, but are actually enemies of this country. It is these traitors who let the enemy know where our weakness lies, and enable the enemy to pounce upon us when we are not prepared.

President Roosevelt, in speaking of the "fifth column," likened it to the Trojan horse that betrays a nation not prepared for treachery, and told us that we must deal vigorously with spies, saboteurs, and traitors who are the actors in this new type of strategy.

As for myself, I was aware of this menace long before the expression "fifth column" became current in the United States. As early as 1933, when the Nazi Government first took power in Germany, I warned the American public against the type of propaganda which the German Government was responsible for, and which sought to weaken our national structure by arraying racial and religious groups in this country against each other. It was largely through my efforts and because of the seriousness of this menace that I found it advisable to urge the creation of a committee to investigate un-American activities. The committee then created did yeoman work in ferreting out types of propaganda which were working in this country to undermine our institutions. It was after this committee was created and did its work that the American public first came to realize the insidious methods of this new type of activity, creating a silent war of disruption, whereby the foundations of our democracy were weakened and discord was sown among our people.

I early realized that the activities of the German Government could be directed toward one aim only, and that is the destruction of our democracy and the creation of a totalitarian state.

Long before Hitler obtained power, I was in Germany on a visit, and could then already observe the tendency to world domination upon which Hitler capitalized and obtained power. Germany was even then going through a rearmament process, and in spite of the fact that it was clearly forbidden by the Versailles Treaty to rearm, the provisions of the treaty were openly flouted and disregarded, and one could see in the streets armed bands of soldiers on every corner. Perhaps, if the nations which were responsible for the enforcement of the Treaty of Versailles had seen to it that the

treaty was carried out, this present conflict would never have taken place. But it is not for us to tell foreign nations what to do, and if they did not see fit to defend themselves against the menace of nazi-ism, they are paying for it heavily at the present time. God forbid that this country should find itself as unprepared as the nations of western Europe were when the invader marched in.

I also had occasion to observe that the German Government, the republican government, yielded its power to the Nazis without a fight, and without an effort to maintain itself in power. It committed suicide, and with it democracy in Germany committed suicide. It was just because the republican government in Germany was weakened by "fifth columns" which the Nazis maintained in that country that it became so easy for the Nazi Government to obtain power in Germany. It is this very method of a "fifth column" which Nazi propaganda used in this country until the committee, which I created, was able to ferret out its activities and expose them in broad daylight.

Hand in hand with rearmament in the physical sense, came a thorough training in propaganda methods. The German Government organized a special ministry for the training of propagandists for use throughout the world. Young men and women were sent all over the world as Nazi agents to spread the gospel of national socialism. A good many of our native-born crackpots were likewise enlisted in the service of German propagandists. There was always in this country a lunatic fringe, and there is hardly any movement which has no adherents. These so-called movements are always hard pressed for cash, and the only way in which they can function is by having generous donors contribute to their cause. In the absence of American contributors, the German Government realizing the importance of having a Trojan horse in our midst, cultivated these crackpot movements and lavishly contributed money for the sole purpose of the disruption of our Nation. Hence all these Silver Shirts, Friends of New Germany, The Order of '76, Christian Mobilizers, The White Knights of West Virginia, American Nationalists Party, American Crusaders, American Patriots, and a good many others with such high sounding, patriotic American names, were really the dupes of Dr. Goebbels' propaganda machine in Germany. Not only this country was involved, but Nazi agents permeate the entire North American continent, going to Mexico and Canada, as well as Central and South America, establishing branches everywhere for the sole purpose of preparing the soil, and creating a foundation for a Nazi dictatorship. All these conditions to which I called the attention of our public again and again, were either disregarded, or sometimes even ridiculed, and I was called an alarmist and what not.

The example of German propaganda did not go unheeded. Other nations with definite ideologies of their own also introduced their propaganda techniques in the United States. Thus we have propaganda from Italian sources, Russian sources, Arabian sources, and Japanese sources, and others. This propaganda is directed toward the same general principles, and that is to weaken the peace and harmony of this American Commonwealth and the destruction of our liberties.

Looking back at the history of the last decade, we find that the decade immediately following the World War from 1920 to 1930 was a decade of internal peace and harmony. The American people minded their own business, keeping away from foreign entanglements, and the Nation was prospering and constantly rising in its scale of living and its inner harmony. But the 1930's did not present this type of picture. The fury of German propaganda and the propaganda of other nations which was then unleashed against this country disrupted the harmony and peace and made this country jittery. We no longer enjoy the blessings of a free country because of this insidious propaganda which disrupted the unity of our Nation. I shudder to think how successful this propaganda has been in casting suspicion on the motives of a good many of our public men, and arrayed brother against brother, and citizen against citizen, and neighbor against neighbor.

I do not believe, however, that any congressional committee can properly ferret out this propaganda and successfully destroy it. It is something which the people of the country as a whole must become aware of, and fight in their own way. No matter how much money we see fit to appropriate for the investigation of this "fifth column" activity, the only way to actually put an end to them is by educating the American people. The American people must understand that our strength and success lie in our internal unity. Anyone who seeks to berate any particular racial group or religious group among citizens, is a traitor to America. We must never forget that the Constitution of the United States defines the term "treason," not only when war is waged against the United States, but when aid and comfort is given to the enemies of the United States. Aid and comfort given to the enemy is whenever our citizens, forgetting their obligations to their fellow citizens, seek to bring about cleavage and dissension among the various racial and religious groups composing the United States of America. Our strength lies in our unity, and destruction lies in the dissipation of our forces.

A brief year ago, the America public was still discussing the possibilities of war and peace, but the situation at the present time has reached the stage where no further discussions of this condition is possible. Europe has embarked on a bloody and terrific contest which takes every ounce of its energy and every bit of its strength. Masses of men arrayed against each other are engaged in the bloodiest carnage the world has ever seen. Nevertheless, all of us hope that the struggle of European democracy will not have been in vain, and that, after the fortunes of war have finally been settled, they will settle in favor of the cause of our democracy, and not to the advantage of Hitler and his cohorts.

The American public must realize that one cannot achieve liberty without a struggle. It will be absolutely useless for us to engage in a social program to continue along the lines of our constitutional liberty, unless our liberty is protected in the first instance. What is the use of passing laws for the benefit of the workingman, for the benefit of the wage earner, for the benefit of the poor and submerged?

What is the use of having a program of public works, of social security, of unemployment insurance, and all other social advantages which we have gained in the last few years under the enlightened leadership of our President if we shall be subject to invasion by a ruthless foe?

The situation at the present time reminds us very much of the time when Rome fell under the impact of ruthless barbarians, just as western civilization is now being trampled under foot by relentless barbarians. Just as human civilization was ground in the dust by the heel of brutal oppressors, so now western Europe and the civilized world as a whole is under the attack of a pernicious might. The nations of Europe failed to properly protect themselves against this menace and took the word of a liar and perjurer, relying on his promises and doing nothing to counteract. If the European nations followed a program of thorough rearmament, Hitler would have thought twice before he saw fit to invade any of the peace-loving nations of the western world.

Any American who lends himself willingly or unwillingly to the allurements of Nazi and Fascist propaganda becomes a warrior in the Nazi Army. Every time un-American propaganda makes its appearance in print or on the platform it destroys and weakens the fiber of our liberty and makes foreign conquest more than possible. Perhaps the secret weapon which Mr. Hitler boasts of possessing in order to bring the world to its knees is this weapon of propaganda which he uses right and left to carry out his designs against peace-loving peoples. It is this Nazi propaganda which appears to us in many forms, and, as I said before, it sometimes takes the shape of patriotism to carry out its point. It used to be said that the American flag is the last refuge of a scoundrel. Today the American flag is being used to further the cause of Nazi propaganda. A good many so-called American patriots very often, in ignorance of the true facts, fall for insidious tricks of foreign propaganda and indulge in racial or religious attacks which have no other purpose but to sow dissension among our people so that it will be easier to conquer us when the foreign invader sets foot on our soil.

This is the technique which was employed by foreign propagandists in Europe. Most of the countries which were invaded had a "fifth column," which prepared the ground for Nazi troops, and the Armies had only a small task before them. The important ground work for Nazi destruction was laid by "fifth column" activities.

I do not believe that any appropriation made by Congress can possibly wipe out the "fifth column." I do not wish to criticize the congressional committee, which at the present time is investigating un-American activities, but I doubt very much whether the activities described by me are capable of being investigated. It is not a question of finding out who the foreign propagandists are, and due to the work of our last committee we have a law on the books today which compels all foreign agents to register. I am afraid that a good many of the people who now indulge in these "fifth-column" tactics are not capable of any registration and not subject to any supervision by the police. They are, technically speaking, our own, that is, not aliens who can be deported, aliens who can be compelled to register, aliens whom we might fingerprint, but they are technically Americans, and as such not subject to any supervision by the Department of Justice, and not easy to ferret out. I believe that the remedy for this type of individual is to be found only in directing the spotlight of publicity on their doings, and on the danger which their activities may cause us.

You see, we are fighting an enemy who has no moral principles. Many years ago a Nazi spokesman openly admitted that lying, cheating, repudiating solemn obligations, or even mass murder are allowed here; the ends justify the means, the end, of course, being Nazi domination of the western world.

It is impossible to appease the rulers of Germany as the nations of western Europe have learned to their detriment and sorrow. Any concessions given to this brutal enemy only urges him on to demand more, and like a beast of prey, one drop of blood will only whet the appetite for more.

Not so long ago, our President spoke about quarantining the aggressor. At this time this quarantine should be a spiritual rather than a physical one. I believe that each of us should concur that the way to destroy Nazi aggressiveness is by a process of American education, and if we adopt a policy of a fighting Americanism instead of the complacent attitude of self-satisfied democracy, we will go a long way toward gaining our objective.

Democracy must not allow enemies from within to destroy it. Democracy must be a living and live force, ready to punish its enemies, and ready to fight for its principles, because if we do not and permit our democracy to fizzle the way it did in Germany, we may as well say good-bye to all the achievements of our peaceful Republic and get ready to become slaves of totalitarian countries. It is not the first time in the history of the world that a democracy was destroyed from within. We had examples of it in Greece.

in Rome, and in a good many city republics of the Middle Ages. Liberty and democracy are not a new concept of government, but have always been considered the ultimate good of mankind.

I cannot refrain at this time from calling the attention of our American public to the fact that it was I, who, in 1933, first accused foreign governments as being engaged in the spreading of propaganda in the United States, and it was through my efforts that a committee was organized to investigate un-American activities, of which committee Congressman McCORMACK, of Massachusetts, was made chairman. Again at my insistence laws were passed compelling foreign agents to register with the State Department. Each of these achievements was the result of months of labor, and public opinion had to be directed toward the creation of the investigating committee, and Congress saw fit to allow this committee only $30,000 for its work. Later on, when in 1937, I pleaded with the American public to give me the necessary support to have Congress authorize another committee, to investigate this serious menace toward democracy, I received a cold shoulder, and when a committee was finally organized through my persistent efforts, and given an appropriation of $100,000, it could accomplish nothing, and certainly much less than my committee of 1934.

It is this menace of totalitarianism which must be combated by all possible means, and it is wholly immaterial whether the assault comes from Nazi sources, Fascist sources, or Communist sources. All these ideologies have a common aim and purpose of bringing about a condition of affairs where the individual will have no rights, and when the state would become the master of us all.

Democracy is not only a form of government, it is also a form of life. In the tradition of American democracy we allow a free discussion of all forms of government, and taking advantage of all privileges, totalitarian ideologies are freely discussed in this country and proclaimed from the housetops. But simply because democracy is tolerant it does not follow that democracy cannot defend itself against its enemies, and it is clear that all totalitarian forms of government are enemies of American democracy.

If we cherish our liberty, if we love our institutions, if we wish to continue along the paths of the way of living to which we are accustomed, if we wish to continue in the traditions of our Constitution, and desire to live as our fathers did, then we must never permit the enemy from within to gain mastery over us. But every attempt to crush our liberty, and every attempt to make us dupes of foreign propagandists must be eradicated without any mercy.

National Defense and Preparedness

EXTENSION OF REMARKS

OF

HON. E. C. GATHINGS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 3, 1940

RADIO ADDRESS BY HON. E. C. GATHINGS, OF ARKANSAS

Mr. GATHINGS. Mr. Speaker, under leave heretofore granted to extend my remarks in the RECORD, I include a radio address made by me over stations WMC, Memphis, Tenn.; KBTM, Jonesboro, Ark.; and KLCN, Blytheville, Ark., on Saturday, June 1, 1940, on the subject National Defense and Preparedness.

Friends of the radio audience, fellow Americans, it is a pleasure to appear on this program and discuss the most important issue before the American people today—that of national defense and preparedness. This question affects the very life and liberty of every man, woman, and child in our land.

The President of the United States is doing everything humanly possible to steer our country clear of all complications, and under his leadership, and with the solid backing of Congress, America is forging ahead with full preparation for our armed forces—for common defense. We are under no misapprehension as to the gravity of the situation abroad, or as to our duty in reference to the full protection and preservation of the life, liberty, and happiness of all American citizens.

No people under the sun have been so blessed by Providence as have the American people, and no other people have a richer heritage to protect. With the never-failing loyalty and patriotism of Americans everywhere to inspire, encourage, and support your representatives in Congress, there shall be no failure in performance of the task that lies before us.

My first admonition to you is to keep cool-headed and be of good courage, as Americans always have, and by the help of God and the wisdom of our statesmen we shall preserve, protect, and defend our liberties and our institutions. We who lived and served in the dark days of 1914 to 1918, and particularly those who trod the blood-soaked battlefields of Europe in those years, are not unaware as to the horrors of war. We all hate war and strive to preserve peace, but thoughtless is he who does not contemplate the awful fact that democracy and liberty are today fighting as never before, while communism, nazi-ism, and despotism are on the march.

We must and will move rapidly to the completion of a powerful, highly, and completely organized national defense. To neglect a matter so important is a sin against a free people.

If we do not believe Washington was right when he urged full preparation for war was the surest guaranty of peace, then we must only take a look back to 1932, when, unarmed and defenseless, yet rich and prosperous, Manchuria was ruthlessly invaded and overrun by a military despotism; then stand on the side lines and look upon bleeding and unarmed millions of Chinese as they are murdered by the speedy minions of death from the sky, both on land and on sea; or we might turn to defenseless Ethiopia and watch again the submission of a pitifully unarmed people to the power of a great military machine; and on we march until we behold the bloodless conquest of Austria; the complete subjugation of Czechoslovakia; the bloody murder of Poland; the inexcusable and ruthless invasion of heroic and honored Finland; the invasion of the Netherlands and Norway; then Holland and bleeding Belgium; and now heroic France is at the gates of the slaughterhouse.

Great Britain today is paying some of the costs of unpreparedness. Winston Churchill's amazingly frank admission in the House of Commons, that failure of the Allied campaign in central Norway was due to the overwhelming superiority of German air power. This provides the world with a grim object lesson on the dangers of neglect with respect to national defense.

Before Mr. Churchill became prime minister, he criticized Britain's "failure to maintain or regain air parity with Germany," and warned that this neglect "will condemn us for some time to come to a great deal of difficulty, suffering, and danger which we must endure with firmness until more favorable conditions can be established."

The record of events since Munich gives disturbing proof that the nation unable to defend itself becomes easy prey for greedy and unprincipled aggressors. Britain's shocking experience in Norway is well worth pondering on this side of the Atlantic Ocean in these crucial days. The same sort of indifference which afflicted England in recent years has been all too evident in the United States until the last year or so. The same outcry raised in England against military costs has been heard from many Americans. Even now there are those who contend that what has happened to the democracies of Europe could not happen here.

But these misguided individuals should not be allowed to forget that when aggression is on the march, the lust for more power and further conquests is unending. If Britain and France should fall—and it is high time that America began to think seriously about that very possibility—we would have two oceans to watch instead of one. We do not have a two-ocean fleet, because we have depended upon England to patrol the Atlantic for us. Can we afford to ignore the possibility of Nazi domination of Greenland or of Bermuda, of Nazi "fifth columns" in any of the republics to the south? And what of Japan in the Far East if democracy is crushed in Europe and we are forced to divide our fleet in order to protect both the Atlantic and Pacific shores?

America should profit by Britain's tragic lesson; that while the costs of preparedness are great, the costs of unpreparedness can be inestimably greater.

Our Government must be prepared to defend our country and our people against any aggressor. Adequate armament for national safety must be our first concern. We commend the steps thus far taken to strengthen the Army, the Navy, and the air forces. We urge that further armament be expedited. We must have an army of adequate size and training, provided with the most modern arms and equipment—a navy sufficient to protect the interests of the United States, and an air force with superior personnel and equipped with planes of the latest types.

The National Guard and all other branches of defense should be adequately trained and completely equipped. The availability of trained men and the best of material for defense must be assured.

Financial preparedness is just as necessary as military preparedness. Only if we are strong financially can we expect to carry the burden of any prolonged struggle.

We are a peaceful nation. Our Republic has long voiced its opposition to war, its support of the principle of the peaceful settlement of disputes between nations, and the importance of the limitation of armaments. But under present world conditions we must be prepared to defend our country—prepared with a defense of such strength that any potential aggressor, however powerful and ambitious, will not attempt to attack us.

It is imperative that preparations go forward promptly and speedily to protect our people and our country that we may continue to live a free people. As representative of all of our people, Congress should discharge fully its responsibilities as to the national defense, as it did in the passage of legislation to keep our ships out of the war zones of belligerent nations.

It has been said that "procrastination is the thief of time," and we must look the facts squarely in the face and fearlessly and faithfully do our duty. What, then, is our duty? We are the richest land on earth in everything necessary to our protection. Our wealth of minerals and soils, the unlimited productivity of our mines, farms, and factories, and the unexcelled genius of our people are equal to the task. We must for our protection build, not the largest, but the mightiest and most effective army on the globe. Our flag, the symbol of liberty, must float above the swiftest,

most powerful navy that ever plied the seas. Our Army and Navy must be accompanied by the best air force in the whole, wide world. Our men must be the best trained and equipped soldiers and sailors in the world.

I have talked freely and assuringly about what we must and will have, and now I shall spend a few moments of time trying to tell you something about what we now have, since we are witnessing in a striking manner an exact duplication of the historic conflict of 1914 to 1918, and upon precisely the same ground, except with added speed and increased fury.

We do not yet, by any means, have all we need in the way of supplies, equipment, and ammunition, but let me assure you that I know of my own knowledge that your national-defense needs are being rapidly and efficiently provided for. Everyone in position of responsibility from the President down through the War and Navy Departments, the Cabinet officers, Senators and Representatives in Congress, and heads of executive bureaus are fully alert and aware of their responsibilities and are courageously meeting that responsibility, all determined and devoted to the objective of adequate preparedness as the only assurance of avoiding involvement in war and for the preservation of peace.

War in Europe necessitates consolidating our national strength to resist any possible attack. Indeed, there is such general agreement on the subject that the complicated nature of the problem may not be fully appreciated.

Defense of the United States is not simply a matter of manufacturing guns, airplanes, and other military equipment. In times of world crisis it is of great importance that we have an armed force on which the United States can rely to repel any immediate assault. Adequate defense, however, involves at least two vital factors in addition to trained forces and modern equipment. War machines can be no stronger than the economic systems supporting them.

The possibility of a German victory in Europe makes it imperative to tighten up the loose ends of our defense policy without further delay. The time has come to seek more positive agreements for defense of this country against aggression from any source.

There is no occasion for hysteria over a possible airplane invasion of the United States. But there is a real need for tightening up our lines of defense. And that need extends as certainly to the field of international relations as it does to the manufacture of proper equipment for the Army.

On May 16, President Roosevelt addressed a joint session of the Senate and House of the United States on the subject of national defense. I will not go into the details of his speech because most of you no doubt heard his address. He discussed the actual flying time necessary for an enemy force to reach our country from various foreign points, and the figures were amazing as well as frightening. In his address, the President stressed the need for over 800 millions of dollars for the defense of America.

It must not be assumed that the Government of the United States has not taken steps looking to the national defense. Today, the Navy is stronger, better equipped, and more efficient than at any time in its history in time of peace. Today the Army enjoys its greatest peace-time strength. The air establishment, both naval and military, is stronger than at any time in the history of the country in time of peace. During the administration of President Roosevelt, the Congress has appropriated more than $7,000,000,000 for national defense. The Congress is ready to vote for military and naval defense sums of money which will secure the safety of this Republic.

President Roosevelt laid before the country a program of national defense which will meet the support of both the Congress and the Nation. I am standing and you are standing squarely beside the President in plans for the security of these United States. It is my own view that we must build an unconquerable navy. A vast fleet of military and naval aircraft must be provided. Antiaircraft defenses and heavy artillery must be produced in increasing volume and of the most modern and scientific pattern. The strength of the Army must be augmented, and intensified training and modern equipment must be supplied to the National Guard and to the Reserves.

Congress is already working at top speed to carry out the program of President Roosevelt, and within the last 10 days the House of Representatives has passed the following legislation:

A bill from the Military Affairs Committee for the building of powder plants, ammunition-loading plants, warehouses, and other structures that may be necessary for the manufacture, maintenance, and storage of necessary supplies. The bill authorized further appropriations for the necessary expenditures in the enlistment of flying cadets up to 8,500 in number and an average of 6,000 Air Corps Reserve officers to be ordered to extended active duty. The bill further provides for an emergency fund for the President, for each and every purpose connected with the security and defense of this country, the sum of $132,000,000.

Another bill passed this week by the House of Representatives from the Committee on Naval Affairs would expedite naval shipbuilding.

Still another bill passed by the House this week, from the Committee on Naval Affairs, would authorize the construction or acquisition of naval aircraft to a total of not less than 10,000, including 850 airplanes for the Naval Reserve. The bill further provides that the Secretary of the Navy is authorized to establish, develop, or increase naval aviation facilities at many points throughout the possessions of the United States.

I am glad to support our President in another phase of his program—that of preventing any man or group of men from making large profits in the manufacture and distribution of needed war materials. No one has any right to live under the stars and stripes and have it in his purpose to make a large profit out of the necessities of his Nation in the hour of its peril.

Nothing, or very little, has been said about our duty in the matter of defense against deflation. This is a deadly enemy which has come within our midst since the invasion of Holland. Today, millions of American citizens on the farms, in the factories, and businesses of the United States are losing vast sums of money on account of the deflation of values. It is advisable that immediate action be taken not only against a foreign enemy, but also against this enemy of deflation which is in our midst.

In the very first place, this country should adopt a program against subversive groups and subversive activities which, it is indicated, are going on all around us, and which seem to be given at least sympathetic toleration in some parts of the country. The administration, in my opinion, should demand the immediate enactment of legislation closing our doors to immigrants and deporting all undesirables who are aliens. The House Immigration and Naturalization Committee, of which I have the honor to be a member, passed a bill last week to deport Harry Bridges to Australia because of his activities in the capacity of an alien organizer. Our work has just begun. We intend to not only close our doors to their entry into this country, we are going to clean house by deporting alien agents and sympathizers who are attempting to break down our democratic form of government. There must be no "ism" in this country except Americanism.

Subversive elements contribute to a nation's unrest. "Pink" and "red' Communists of all kinds go about behind the scenes stirring up discontent and hatred. It is their aim, their guiding principle to foster world unrest and hatred and bring about what they call their order of things by fostering war and bloodshed. When all the world is embroiled, their day of days is at hand. That is when they firmly believe they can step in and rule the world. The crying shame of all this evil planning is that America, today, is filled with these alien elements. Most of us have no idea just what a stronghold they have in this land of the free.

Fortunately, our Government has awakened to the subversive activity which is going on, and is doing something about it. The famous Dies committee is but one of our defense measures from within. Every penny we can spend to rub out such influences is well spent. If we can take care of ourselves from within, spend our money judiciously for national defense, and keep America for the Americans, we need have no fear.

Let us be thankful that we are Americans—at the same time realizing that this country has become what it is today because we have lived under a system of free government—all of which is in danger if we ever are so foolish as to let subversive influences, inside or from without, to divide us into groups, classes, factions, or sections and so bring the American way of life we have known and loved so well down into the dust.

We have witnessed what is known as the "fifth column" in the European conflict. We have it here masked in secrecy and treachery beyond reasonable recognition. While we are now under the necessity of spending billions for the preservation of our sacred institutions, we may as well begin now to perform a too long delayed duty and to spend whatever is necessary to weed out the Communists, Fascists, and other public enemies. Why should we maintain diplomatic relations with a country that hatches, finances, and promotes a vicious conspiracy to undermine and destroy our Government and its institutions, with which must go the hopes and aspirations of our children and their children for generations to come? Let us root out the Judases, Bridges, and Benedict Arnolds in America.

Much has been published of late about "fifth column" activity in Norway, Holland, and Belgium. Spy systems as pictured in popular movie versions would lead us to believe that "fifth columns" are made up of daring, glamorous people with access to valuable information. Actually, such groups are numerically small and of little effect when their activities are known, but the "fifth column" may be numerically tremendous in a country, and there is every reason to believe that such a column is active in America.

So long as political and individual expediency is more important than subscription to the fundamental doctrines of liberty, the "fifth column" will be as successful in America as it has been in Europe.

The "fifth column" is made up of those who follow a policy of expediency in place of principle. Most Americans feel that there is no immediate danger to this country from "fifth column" activities. Recognition of the fact that avowed Communists and Nazis in our midst are doing their utmost to undermine our democracy is coupled with the firm belief that they form too meager a minority to do much actual damage today or tomorrow. Apparent absence of immediate danger, however, should not lull us into a false sense of security. Recent experiences of peace-loving European nations which believed as we do that "it can't happen here" demonstrate the need for constant vigilance.

President Roosevelt, Secretary of State Hull, and the Congress are working night and day to keep us out of war, and they have better information on which to base their policies than any amateur promoters of so-called peace organizations possibly could have. They know that the best and perhaps the only way to spare us the horrors of war is to make our defenses strong enough to discourage an aggressor before they can grow great enough to reach out toward our shores.

I fear that our country is at the present time honeycombed with spies, termites that bore from within. A leopard cannot change its spots. Don't let us be caught napping as Great Britain was. Let us prepare. Another billion dollars as asked by our President

on yesterday for the security of our liberty and independence would be cheap insurance as compared to our cost in the last war. Our independence and liberty cannot be reckoned in dollars and cents.

The ruthless dictators of Europe are on the march. We may be next. They must be stopped or civilization will be retarded a thousand years. Let us prepare our defenses—two fleets, one for the Atlantic and one for the Pacific, each at least the size of our present one. An Army and air force large enough to protect our country would eliminate unemployment and remove most persons from the relief rolls.

If we must fall into error of judgment on the questions of preparedness, let it be by overrating the dictators. Such an error would ultimately be in our favor and perhaps save the lives of many good American citizens.

Let us keep a sharp lookout for the Trojan horse and the "fifth column." Don't let us be foolish and say, "It can't happen here." It is reported by the press that in our own eastern Arkansas literature advocating nazi-ism has been distributed.

America is truly menaced. We have no choice but to make the supreme effort to guard those things which we hold most dear from the threat of alien attack. To that effort we must give our all and any attempt to divert us, from whatever source it may come, must be recognized for what it is and rejected as an undermining of the Nation's security.

It is 19 years since a nameless doughboy from a battlefield grave in France was buried among the Nation's heroes in Arlington Cemetery on November 11, 1921.

Presidents on Armistice Day lay a wreath of remembrance against the great stone, that calls almost all visiting dignitaries from foreign lands, even official spokesmen of once enemy states, to the brooding quiet of Arlington Cemetery on such occasions. Time nor the hand of man has little changed the peaceful setting of the Unknown's Tomb since November 11, 1921, when the heart of the Nation throbbed to the solemn music and lifted noble aspirations for world peace above his bier. Over in that section of this great last encampment of valor, reserved for those who fell or fought in older wars, the ranked, orderly rows of headstones have grown a bit grayer, these 19 years. Row on row, sweeping away over the swelling breasts of grassy hills and down through wooded hollows, the long, ranked columns of white headstones march. This is the final resting place of comrades at arms; and for all these unknown, whether sleeping forever in France, or in the soil of their own land, the Tomb of the Unknown Soldier at Arlington has become through the years the symbol at which a people pays its own endless tribute to valor. When I see the Tomb of the Unknown Soldier, my heart is filled with reverence, and I turn away with a prayer for peace, full of the hope that we shall never again need to sacrifice American youth on the altar of war.

We renounce war; we renounce war because of what it does to our men. We have seen the long, long hospital trains filled with their mutilated bodies; we remember the maimed men for whom the war is not yet over. We renounce war because of what it compels us to do to our enemies, bombing their mothers in villages, and starving little children. We renounce war for the undying hatreds it arouses, for the dictatorships it puts in the place of democracy, for the starvation that stalks after it.

This is our America, our democracy, ours to govern, ours to administer, ours to perfect, and ours to make more glorious. Every American has a solemn duty—a duty commensurate with his abilities, his resources, and his intellect. We must stamp out and purge ourselves from communism and all the other foreign "isms" and subversive influences which seek to undermine things American. We shall tolerate neither the "fifth column" nor the espionage nor sabotage of foreign agents nor the treachery of any domestic influence or group.

During this solemn time in our country's life, the President, the Senators and Representatives, the Republicans and Democrats are working hand in hand, strengthened by unity, to protect your safety. Congress may remain in session during these perilous times for several weeks. You have entrusted me with the responsibility of helping to guide America through a grave crisis, and I put that duty to you above all else. My concern is not with what the future holds for me individually but with what the future holds for this land of the free.

Keep Burning the Lamp of Faith

EXTENSION OF REMARKS

OF

HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 3, 1940

COMMENCEMENT ADDRESSES OF FRED TAYLOR WILSON

Mr. RANDOLPH. Mr. Speaker, a few days ago I was unable to leave Washington to deliver two commencement addresses in West Virginia. It was my good fortune to secure my friend Fred Taylor Wilson to substitute. He spoke at both Davis and Walkersville high-school graduation exercises. Mr. Wilson, whose historical books are known favorably by Members of Congress, said, in part, in his talks:

It was a source of supreme regret to Mr. RANDOLPH that he could not be with you this evening. Only the greater call of duty as a Congressman kept him away. These are serious hours in the Nation's Capital.

I need not remind you that you are leaving high school at one of the critical hours in world history. But be not dismayed. At a low period in the late World War Lloyd George, then Premier of England, announced to his people that they were at that time going through a tunnel, but light would break again. And it did. We are again going through a tunnel. You who live in West Virginia know what it means to travel through tunnels. You know that however dark it may be for a moment, if you keep traveling the light will shine again.

My theme this evening might well be called "A lamp that must be kept burning." Lord Grey, of England, some months ago gravely said that the lights of civilized life were going out one by one all over Europe. And they still are. The black-out of war now hangs over all the nations of Europe. There are many lamps in America which must be kept burning at this dark period. This evening I shall discuss only one of them, and that is the lamp of faith. As I speak to you I want to ask you to allow the rays of light from that lamp to emanate in four directions.

BRAVE SOULS ARE NEEDED

First of all, let the rays of the lamp of faith in yourselves shine on whatever the future may bring. This is the time for brave and confident souls. Your courage will be given a supreme test as you face an anxious and bewildered world.

"All the big things we know about,
Were done by self-believers.
Quitters never yet have been,
Nor will be achievers."

That does not mean that you must be vain or conceited or unduly proud, but that you must believe in your own star. You must make yourself worthy not only of your own respect but of the respect of all others. "To thine own self be true; and it must follow, as the night the day, thou canst not then be false to any man."

It has been many years since your speaker graduated from university. As I look back tonight to my own graduation, I find that the members of my own graduating class who have won the highest distinction were those who early in life hitched their wagons to stars and pressed confidently on. As young men you must be brave and strong and true, to keep such a faith and wear always the white flower of a blameless life. As young ladies you must keep faith first with yourselves and belong always to the beautiful, the sweet, and the good.

This lamp of faith also must turn to an ever renewed faith in your fellow man. You had better trust all men and be disappointed in a few of them than go through life cynical and skeptical of all men. Do not be too much disturbed when someone disappoints you. Remember the Master of all men, out of 12 chosen friends to assist Him in His divine mission, had 1 of them to doubt Him, 1 to deny Him, and 1 to betray Him. Whatever others may tell you, let me impress upon you that there are in America at least more men who love honor than those who love dishonor and far more women who are pure and sweet and good than there are those who wear concealed a scarlet letter. The vast majority of the folks you will know in the years to come will be worthy of your faith and love. Keep your faith in your fellow man.

Now, above all other times, keep your faith in your country. More people in America have renewed their vows of devotion to their own land in recent days than possibly in any other period of our history. More than ever before, we appreciate the great blessings that are ours. We fondle afresh the precious jewels of free speech, a free press, freedom of assembly, and, above all else, freedom of religion. For 150 years we have looked upon all these blessings, like our own liberty, as matters of course. One by one we have seen other nations lose them.

MEN BUILD A NATION

We are prone to forget the true secret of a nation's greatness.

"What builds a nation's pillars deep
And its foundations strong?
What makes it mighty to defy
The foes that round it throng?

"Only men can make
A nation great and strong:
Men who for truth and honor's sake
Stand fast and suffer long.

" 'Tis men who work while others sleep,
Who dare while others fly;
They build a nation's pillars deep,
And lift them to the sky."

We boast of our vast territory. But Russia has far more acres of land than we have. Territory does not make a nation great. Greece and Palestine made more contributions to the world than any other two countries. But their territory was but little more

extensive than a west Texas county. We boast of our population, and, our census takers will soon tell us that we have here in America more than 130,000,000 free people. But population does not make a nation great. China, the "Rip Van Winkle" of the nations, has more than three times as many people as our country.

The greatness of a nation is determined, like the greatness of an individual, not by what it possesses but by the quality of the ideals which possess it. Our true wealth is moral and not material. Our greatest asset is our devotion to truth and not to world trade. Better have the spirit of democracy at work in a little land of limited wealth than to enjoy riches at the price of liberty. It will fall to your lot as the men and women of the future to guard well our heritage.

"America! America! God shed His grace on three;
And crown with good thy brotherhood, from sea to shining sea."

Your lamp of faith must, most of all, include an ever-increasing faith in God. I am aware of the doubts which will assail you. I know something of the dark periods of intellectual anxiety through which you will pass. But keep your faith. The men and women whose names will live till the last syllable of recorded time, were all men and women of great faith. That is true of those who now guide our destinies.

TRUST IN THE ETERNITY

Above all else, it is the character of our public men which makes them great. At the memorial services held in Congress each year, but little is said of the high achievements of the dead statesmen. Their simple faith is always a source of inspiration. A study of our great men will reveal most of them coming to the twilight hour with a simple faith in God. Henry Clay, after a life of great achievement and high ambition, declared on his deathbed to the statesmen friends around him, that the honors of earth looked small in the light of eternity. Webster, the mighty Webster, when dying, asked his family to sing about his bedside, There is a Fountain Filled with Blood. At his request there was placed upon his tomb these words, "Lord, I Believe; Help Thou Mine Unbelief." I suggest the words of that tomb as your prayer as you fall asleep on this, the first evening of your graduation.

A study of the atmosphere is always fascinating. The lower portion of it called the troposphere is where we live and move and have our being. It extends upward for about 10 miles. Above that for about 90 miles more we have the stratosphere where it is said man will some day fly at more than 1,000 miles per hour. Most of us spend our lives in the troposphere of the temporal. Now and then some rare soul rises to the clear pure air of the stratosphere of the spiritual. May many of you experience that glorious ascension.

You have the message I have come to bring you. It is a simple one. There is the lamp of a great faith in yourselves, your fellow man, your country and in your God which you must keep burning in all your future years. I close with words which I have used on other occasions like this:

"I will not wish thee riches, or the glow of greatness;
But that whithersoever thou goest,
Some weary life may gladden at thy smile;
Some weary heart find sunshine for a while.
So may thy years be as a track of light
Like an angel's footsteps, passing through the night."

The Nation at the Crossroads of History

EXTENSION OF REMARKS

OF

HON. JOSEPH W. BYRNS, JR.

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Monday, June 3, 1940

MEMORIAL DAY ADDRESS OF HON. THOMAS R. BALL, OF CONNECTICUT

Mr. BYRNS of Tennessee. Mr. Speaker, under leave heretofore given me to revise and extend my remarks, I am including hereafter an address made by the Representative in the Congress from the Second District of Connecticut, THOMAS RAYMOND BALL, on the village green at Old Lyme, Conn., May 30, 1940, before an audience composed of the American Legion and their friends on the occasion of Memorial Day.

Congressman BALL has a distinguished war record and therefore is particularly qualified to speak on Memorial Day. Mr. BALL, although a member of an opposite political party, I have found to be wholly conscientious, always alert and attentive to his duties, and a true American in that his regard for his country transcends his party allegiance.

Mr. Commander, reverend clergy, my friends, first I want to tell you how deeply touched I am that my fellow comrades of the American Legion should ask me to speak at this service on this sacred soil on this Memorial Day morning. Many memories cluster around me as I stand here, treasured memories of other occasions when we have met together for these solemn rites, of those who, year after year, placed the flags on the graves of our soldier dead, brought here their offerings of flowers, who spoke and sang, and smiled and prayed, and who have gone from us. Many of them lie not far from here in the company of their fathers, others far away, but they are with us today, together with those of an earlier day. As St. Paul wrote "We also are compassed about with so great a cloud of witnesses."

The first grave marked in the cemetery is that of a soldier, a valiant officer of a small but courageous band, who was laid to rest in 1676. From his day to ours the men of Lyme have been fighters, and the roll of our war dead is the sacred symbol of the devotion of Lyme's sons to God and country. From this street came the response to the Lexington alarm, on this green mingled the French fleur-de-lys and the new-born Stars and Stripes, on it young men drilled in '61, and went forth to die for the preservation of the Union—that Union of sovereign States that has made our Nation. We who stand here today recall the last of those boys in blue, as, aged and infirm, they bequeathed to us the sacred trust of cherishing the memory of the Grand Army of the Republic, and, as we honor today these men, let us not forget those other Americans who fought a lost cause, and let us fervently pray that never again shall this broad land be torn asunder.

Even more vivid than the recollections of the soldiers of the sixties are those of our own comrades of the last war. It has been fashionable in certain quarters to belittle the Allied cause in that war and to question our country's conduct and motives, but we who were part of that grim picture have no apology. We know that we were right and our victory deserved, and we realize what it would have meant for the world had the enemy then prevailed. Paid propagandists and decadent defeatists may decry the contribution made by our soldiers, sailors, marines, and loyal citizens, but the Nation as a whole is still proud of the job done and still bows with reverence before the shrine on the heights of Arlington where "rests in honored glory an American soldier known but to God."

This is a solemn hour, fraught with much danger. The whole world is beset with the forces of evil, and in Europe the nightmare of modern warfare is no longer a dream that is spent with the morning light but a vivid reality, an accomplished fact to be taken literally and with no illusions. The diabolical ingenuity of the inventor has equipped an army with new weapons of warfare, mechanically perfect and infernally efficient, and with them the calculated cruelty of the conqueror has extinguished the national life of once-powerful peoples, and even now is threatening with extinction the Christian civilization of western Europe. Destroyed forever is the fiction that those who crave only peace can preserve it through blind isolation. The Scandinavia that seemed serene in her security against war discovered in despair that the hungry monster would not pass her by. In a few weeks we in this country have become aware of what this war means to us. We are day by day learning an awful lesson, and God grant that we may not be too late to profit by it.

The conflict across the sea is not only one of steel, of flame, of gas. Behind the smoke of battle is the unseen warfare of the spirit. The forces of fury, actuated by godless greed, are now battering at those defenses which we know must stand, the ramparts of religion and piety that protect those simple and sincere souls who seek only to live their lives in peace and quietness, earning their daily bread by honest labor. All that we know and love here at home is no longer immune from the insidious germs of an alien philosophy. The tranquility of this green and village, these churches, the fraternal and friendly groups that meet together in lodge or grange, the principles of this American Legion post, the lessons of Scouting learned by these troops, the study of sound learning and simple truth that has characterized our schools and colleges—all are imbued with the spirit of God, a spirit that receives the studied sneers of the savants, serfs, and soldiers of totalitarianism.

This Nation is at the crossroads of history. Her destiny is before her. She is ill prepared for her advance. Her national debt is colossal, her industry only convalescent from the illness of depression, and her businessmen harassed by worry and apprehension. Her labor groups are engaged in fratricidal skirmishes and at the mercy of Communist agitators; her Congress is threatened by organized bands of malcontents constantly demanding special privileges and benefits; her Army, though at a peacetime peak, is only half the size of Switzerland's; her Navy, though superb, can alone protect but part of our coasts; and the presence of a "fifth column" in our midst is a known fact. It is futile to speculate on what might have been. We must face facts, and face them squarely.

I am not trying to alarm you unduly, but in all honesty I feel that I must talk straight from the shoulder. We cannot foretell the future, and we can only attempt to judge the past. It is very likely that we shall have to tighten our belts, give up luxuries, and submit to new and heavy taxes, if we are to put our national house in order, restore our Government to solvency, and pay for the increased national defense that is absolutely essential. Our geographical situation that has served us so well in the past is apparently obsolete as an insurance of immunity from foreign aggression. To

be sure we are separated from Europe by the Atlantic Ocean and the Pacific is between us and Asia, but we do not now control both of these seas, and we are definitely committed to a policy of solidarity with the other American republics that makes the whole hemisphere our responsibility, a responsibility that demands our fulfillment.

In the days to come we must realize that much will be required of us, and as problems, which only a few months ago appeared to be remote and somewhat speculative, present themselves forcefully for our immediate attention; we must be swayed by no hysteria, neither must we be stampeded by panic into reckless acts. We must keep our feet firmly on the ground, our minds clear, and our hearts loyal. No class hatred or racial or religious intolerance should have a place in our national thought. We are Americans—first, last, and always—and together we will tackle whatever job may be ours, impelled by the high resolve that in the spirit of those men for whom this day is a perpetual memorial we will be consecrated afresh, and learn anew the duty and privilege of being an American.

National Defense

EXTENSION OF REMARKS

OF

HON. WARREN G. MAGNUSON

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Monday, June 3, 1940

RADIO ADDRESS BY DAVE BECK

Mr. MAGNUSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio speech of Dave Beck, international representative of the Teamsters' Union, on national defense, given over radio station KOL in Seattle and broadcast over all stations of the Mutual System in Washington State, February 20, 1940:

Good evening, tonight I have been asked to address you on the subject of national defense, and in doing so, I shall speak primarily as an American citizen, and, secondarily, as an official of the Teamsters' Union.

And may I say in passing, that is precisely the way I approach every problem that confronts our organization—first as an American citizen.

My allegiance to labor is secondary to my allegiance to the United States, and it will ever remain so.

I ask nothing for myself or for the Teamsters' Union that is contrary to the welfare of our general citizenry.

The Teamsters' Union is primarily an organization of patriotic American citizens who pay taxes and support their families and whose interests are woven inseparably into the American system of government.

We believe in the capitalistic system, under which any man may make an honest profit on his labor or on his ideas.

The members of the Teamsters' Union are ready to defend the United States and have eloquently demonstrated their willingness in the past.

The rosters of the Army, the Navy, and the Marine Corps during the last war emphatically prove that statement.

In every military cemetery and hospital today you will find members of the Teamsters' Union who gave their lives or their health in the service of the United States.

The Teamsters' Union is proud of those men and of the rugged American spirit which typifies our organization today.

We stand for national defense. We insist that this country be protected against the invasion of armed forces, and beyond that, we insist that we be protected against the invasion of alien propagandists seeking to poison the minds of American citizens with prejudice and falsehood.

And so, it is with pleasure that I speak on the subject of national defense, knowing that the thousands of men in the Teamsters' Union echo the sentiments that I voice tonight.

We are one organization that will make no compromise with communism. And that goes for fascism too.

In fact, fascism is nothing but communism with its neck washed.

No Communist can become a member of the Teamsters' Union, and any member who becomes a Communist ceases to be a teamster as soon as we find it out.

We don't argue with him. We just kick him out.

We admit his right to believe whatever he pleases but we maintain our rights to ostracize him. If he wants to destroy everything the Teamsters' Union stands for, let him try to destroy it from the outside. There is no room for him on the inside.

No intelligent workingman believes that communism offers anything but destruction for the wages and working conditions of labor. The Communist campaign of hatred is skillfully directed at capitalism, which unquestionably has many faults and weaknesses.

But while the Communist seeks openly to destroy capital, he works just as hard, but secretly, to destroy labor.

Communism, fascism, or any other kind of dictatorship means nothing more nor less than the nationalization of both capital and labor. It means that everybody would work for the politician in control, under whatever terms and conditions the politician imposes. And any man who maintains his right to strike, loses his right to live. They simply kill him off.

So, when we defend our industrial system, we defend the right of labor to demand just wages, reasonable hours, and healthy working conditions.

We also defend the right to strike, to educate our children, put money in the bank, and improve our economic condition to the limit of our capacity to earn or create.

That is the so-called capitalistic system, and it is the only system that permits a man to stand on a platform and publicly criticize the President of the United States or anybody else.

Labor in America is on the road to ruin if we have to seek alien advice and leadership. Let us deport these alien agitators, not only from the ranks of labor but from business, industry, or wherever we find them.

I support the Dies committee to protect us from subversive alien influences and I support the La Follette committee to protect us from equally subversive domestic influences.

I believe the Federal Government is moving effectively to defend this country at home and abroad. It has enlarged the Department of Justice to cope with the menace of the alien spies who would sabotage factories and throw American citizens out of work to help some foreign power.

The Government is enlarging our armed forces to properly defend us. I approve of those policies.

Very appropriately, National Defense Week falls between the birthdays of our two greatest Presidents. One created this Nation with the sword, and the other preserved it with the sword.

Every schoolboy knows who these men are, but for the benefit of some of the aliens in our midst who are trying to speak for American workers, I will name these two great Presidents.

They are Washington and Lincoln, men widely separated in their backgrounds and social positions. Washington was a capitalist and an aristocrat. Lincoln was a common man, raised in poverty. But their devotion to the ideals of liberty and justice spanned the gap between them.

Baron von Mannerheim, of Finland, reminds me a great deal of George Washington. This aristocratic patriot of a little nation leads his soldiers across the snow to hurl back the bloodthirsty legions of a great power bent on conquest. So did Washington.

History will record the Communist invasion of Finland as a striking parallel to our own fight for independence in 1776.

I salute Baron Mannerheim and his brave little nation. They have survived thus far because they have developed their national defense.

Our own national defenses must be strengthened. I do not pose as a military expert, and I do not attempt to say exactly how.

We send young men to West Point and Annapolis to make a life study of national defense, and when they tell us what to do, I believe we should listen to them and not to politicians or sympathizers of Soviet Russia or any other nation.

It is no secret that our standing Army is one of the smallest in the world, less than half as large as Finland's, with a nation many times as large and wealthy to protect.

It should be recruited to the minimum requirements to guard us from surprise attack at any point.

If the day ever comes when America must defend her shores from foreign aggression, we will need a strong reserve of trained men.

The time to get such a reserve is now. After war comes "it is too late" and we shall then pay the penalty of delay in a needless sacrifice of improperly trained men.

In the last war, when our troops were fighting the second-rate reserves of the German Army, our casualties were six times as great as theirs, notwithstanding the fact that, man for man, our soldiers were far superior.

Do you know why that was? It was because the Germans were trained better than the Americans. And every time a German fell, six Americans fell.

It was fortunate that we had allies in that war. We would have lost it, had that casualty rate continued. In the next war we may have to stand on our own feet, without a well-trained British Army and French Army to support us.

So, for the sake of our national safety and for the individual safety of the men who may some day be called to arms, I urge military training for the boys in the C. C. C. camps.

We should speed the fortification of Alaska. Alaska lies only 40 miles from the coast of Siberia, the Pacific rim of Soviet Russia. Russia is now fortifying Siberia. For what purpose? We can only guess. But Alaska once belonged to Russia and today nations are seizing land that once belonged to them and slaughtering the people who occupy it.

I repeat that only 40 miles separate Alaska from Russia. We are almost as close to Russia as Tacoma is to Seattle.

We should continue to develop Bremerton as the northern base of the fleet. It should be ready to handle the needs of the fleet in wartime. Bremerton should be supplemented by other coast bases, located and developed by military experts and not by chambers of commerce.

We should fortify a chain of islands across the Pacific Ocean so that war in the Pacific could be fought far at sea before a hostile navy could ever reach our shores.

The international highway to Alaska would be a lifeline to that Territory in case of invasion. We should speed its construction.

I believe we should increase the facilities for training Army and Navy officers. I advocate another Federal academy on the Pacific coast with entrance by competitive examination rather than political appointment.

I speak as the father of a boy of military age. If war comes, my son, like yours, will be called to the colors. I believe my boy owes his first duty to his country. But if he is called, I want him sufficiently trained to take care of himself. As a veteran of the last war, I know what happens to poorly trained troops.

While I emphasize the necessity for military defenses, I think we must take stock of our spiritual values. Religion, in reality, is our first line of defense. An Army, without faith to support it, is little better than an armed mob.

Religion is the bulwark of our civilization. In fact, this country was founded as a haven for religious freedom. Through our faith in a supreme destiny and a Master Architect, we have become great.

Perhaps that is why the first assault of the Nazi and the Communist is upon religion. And when religion falls, civilization totters.

I am convinced that the Nazi and the Communist want civilization to collapse, because only, in the midst of universal madness, could such doctrines survive.

The record of both Russia and Germany, under their present rulers, shows conclusively that they demand control of the mind. Any mind open to any thought of tolerance or kindliness cannot embrace nazi-ism or communism.

Therefore, the mind must be prejudiced and Almighty God is banished to Siberia or the concentration camps.

These things are serious in America today. Already too many people have taken a step toward communism by adopting a hostile attitude toward religion and all it teaches.

That is the first blow at national defense.

These are days when men and nations must be strong and righteous to survive. We must be intelligent. We must analyze the motives behind the words of those who would entice us away from the traditions of Washington and Lincoln.

Those men were sustained by their belief in divine destiny and their decisions have given America a heritage it must be strong to defend.

Those who would destroy religion would destroy the sanctity of the oath upon which rests our judicial, legislative, and executive functions of government. They would sweep away the cornerstone of justice on which our entire structure of government rests.

Let those who preach atheism preach it where the Bible is not the final and supreme standard to judge the character of men.

Let us have national defense, not only of our harbors and coast lines but of our hearts and consciences as well. When our national character dissolves, there is nothing left to defend.

Good night.

African Home For Negroes

EXTENSION OF REMARKS

OF

HON. THEODORE G. BILBO

OF MISSISSIPPI

IN THE SENATE OF THE UNITED STATES

Monday, June 3 (legislative day of Tuesday, May 28), 1940

ARTICLE BY HON. THEODORE G. BILBO, OF MISSISSIPPI

Mr. BILBO. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an article from the June issue, 1940, of The Living Age, entitled "African Home for Negroes," written by me.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Living Age for June 1940]

AN AFRICAN HOME FOR OUR NEGROES

(By Senator THEODORE G. BILBO)

Ever since the first public intimation of the introduction in the United States Congress of the proposal for voluntary resettlement of American Negroes in Africa I have been bombarded with inquiries on the subject. One of the leading questions asked me is, "What do the Negroes themselves think about it?"

Naturally enough, the Negroes are divided on the subject of repatriation. There is a right wing and there is a left wing.

The response noted from the right wing has been very salutary indeed. On the day that I introduced Senate bill 2231—April 24, 1939—I had in my possession petitions signed by approximately 2,500,000 Negroes pleading with the Government to provide for their resettlement in the land of their ancestors. At least 2,000,000 of these petitioners were Negroes who belong to the school of thought represented by the Ethiopian League, headed by M. M. L. Gordon, of Chicago, a Negro woman of prodigious foresight and rugged enthusiasm for the welfare and integrity of her race. This league is dedicated to the purpose of promoting the ideals of Negro blood integrity, economic independence, and repatriation of the Negro to his fatherland. Under the guidance of President Gordon, these Negroes have been giving serious thought to the race problem for a number of years.

In 1933, when the first relief bill was pending in Congress, the Ethiopian League—known as the Peace Movement of Ethiopia—petitioned President Roosevelt not to give them alms but to give them an opportunity to rehabilitate themselves on their native heath. This petition has been acclaimed by many as the most extraordinary racial document in the history of the Nation. Did space permit, I should here reproduce this petition in full, but the following excerpts will suffice to reflect the spirit of these Negroes:

"Whereas the distress of the unemployed is most severely felt by such of the uneducated American Negroes who abhor alms, both public and private, in any guise; and whereas the removal of a half million of the poorest from a competitive labor market, at this time, would tend to relieve to that extent the condition and improve the opportunities of the remainder, we, the subjoined signatories, American citizens of African extraction, individually and collectively, join in respectfully petitioning the President to consider our proposal, confident that his conclusions will be for the best interests of our families and of the community at large.

"We are of the so-called North, most of us having been driven from a cruel and avowedly intolerant South to the cities and towns of the Middle West, without a just opportunity to earn a livelihood in our abject new state.

"We are simple-minded, sincere, law-abiding workers who have maintained traditions of simple honesty, industry, and frugality, as much from choice as from necessity. Few of us have education, but we have learned not to heed the blandishments of self-seeking politicians, imposters, and the unworthy and the undesirable products of a hectic civilization that is foreign to our nature. * * *

"Hungry, cold, and miserable, the pursuit of life, liberty, and happiness in America appears futile. Given an opportunity in our own ancestral Africa, the knowledge of farming and simple farm machinery and implements which we have acquired here would enable us to carve a frugal but decent livelihood out of the virgin soil and favorable climate of Liberia, or such other well-disposed country where the Federal Government, in its wisdom, might acquire a footing for us.

"We respectfully ask that the President graciously have this matter investigated now, with a view to fulfilling the expressed desires of Abraham Lincoln in this respect. We are a liability now, and any cost of this project, no matter how great, would still, we sincerely believe, be a sound investment for the American people."

Signatures to this and similar petitions have constantly increased in the interim to bring the total number at present to about 3,000,000.

The Universal Negro Improvement Association is another Negro organization which proclaims the ideals of Negro blood integrity and which has for its objective a repatriation movement. Almost daily I receive petitions signed by hundreds of Negroes in this group.

Negroes from every State in the Union have said by means of petition, by letter, and by word of mouth, that they want to return to the land of their fathers. In a letter addressed to me by President Gordon of the Ethiopian League, this Negro leader said:

"We are Negroes who represent the industrial masses, farmers, and men of skill, and in the land of our forefathers we will not only make a living for ourselves but will be free from race prejudice and discrimination. We highly approve your opposition to the mixture of the two races; for we, likewise, detest the same thing.

This is what the Negroes in the right wing are saying. This is what they are thinking. These are the Negroes who realize that the most understanding friend they ever had, Abraham Lincoln, was one of the most fervent advocates of repatriation. They know he was on the right track when he embodied in the Emancipation Proclamation a clause proclaiming that efforts to colonize Negroes would be pursued. These Negroes know that over and over again he spoke against miscegenation or intermarriage of the white and black races. They know that if the assassin's bullet had not so soon removed Lincoln from the scene of action, the descendants of the Negro slaves would now be enjoying liberty and economic blessings in a country of their own.

Lincoln's utterances on the subject were unmistakably clear. "There is a physical difference between the white and the black races which I believe will forever forbid the two races living together on terms of social and political equality. Let us be brought to believe that it is morally right and at the same time favorable to our interest to transfer the African to his native clime, and we shall find a way to do it, however great the task may be."

It is of considerable moment that two outstanding Negroes in recent addresses before a large assembly of their race in New York both supported the repatriation of Negroes. I refer to Magistrate Myles A. Paige, newly appointed judge of special sessions in New York City, and Elmer A. Carter, Negro member of the State unemployment insurance appeal board. Magistrate Paige, addressing the Negro men's group of the Y. M. C. A., pointed out to his people that the Negro is outstripped in the competition for

available jobs, too often contented to let the successful competitor pay for his support. He was quoted in the press as saying that unless the Negro can win his way through, becoming a part of the working body of the country, "we're going to get our passage back." By "passage back," he meant back to Africa.

Elmer Carter, the Negro member of the New York unemployment insurance appeal board, spoke along somewhat the same lines. He emphasized that there are indications that the country will have to support 13,000,000 or more permanently unemployed persons in the future. He stressed that although Negroes are the largest racial group on relief they are returning to private industry more slowly than any other group. He is quoted as having declared that in his opinion the Negro in the United States is yet to face his greatest crisis. Discussing repatriation, Carter said that he does not see anything absurd in the possibility of transplanting the Negro to Africa in the future. He based his judgment on the fact, he said, that Germany had demonstrated the possibility of transplanting a great mass of people thousands of miles. He might have also mentioned the fact that our own Government has been spending large sums of money in colonizing Dust Bowl victims, by tens of thousands, in Alaska.

These two well-informed Negro men see eye to eye in their views of the unemployment problem and the relief situation.

It is safe to say that as high as 75 percent of those on relief rolls in many State are Negroes. The District of Columbia is a typical example. Last year's records show that approximately 8,000 out of the 10,000 relief enrollees in the District of Columbia were Negroes. This notwithstanding the fact that the population of the District is 400,000 whites and 200,000 colored. In other words, 8,000 of the 200,000 colored are on the relief rolls compared with only 2,000 of the 400,000 whites.

For the fiscal year which ended June 30, 1939, the Government's expenditure for relief amounted to $2,617,974,000. One-half of that 1 year's expenditure could be spent in providing for the resettlement of the Negro in his fatherland, and the Government would save money on the transaction. If we could effect the resettlement of from five to eight million Negroes who are now ready to go to Africa, we could solve the unemployment problem and would be able soon to do away with the necessity of these large annual appropriations for relief.

Some time ago two commissioners were sent to Liberia by the Ethiopian League to confer with the President of Liberia and to ascertain whether he would be willing to admit the American Negroes into Liberia in the event Congress should pass an enabling act. These investigators returned with the assurance that the President of Liberia is ready to receive American Negroes. Formal announcement has been made by President Barclay that millions of acres of land in Liberia are now ready and waiting to be settled by American Negroes.

An educated Negro went from my home State of Mississippi to Liberia in 1902, soon after his graduation from Jackson College in the capital city of Mississippi. He later concluded that he could render more valuable service to his people if he had a knowledge of medicine. He returned to this country and studied medicine at Meharry Medical College. Now back in Liberia, he combines preaching, teaching, medicine, and dentistry.

A titan, a man among men in Liberia, is this Dr. Jones. He insists on teaching Africans to think black and to this end was instrumental in barring from the schools all textbooks for the lower grades which contain the faces of white persons. Published reports reveal the happy estate of many American Negroes in Liberia. These reports serve to convince one that every American Negro should covet the privilege of returning to the continent of his forefathers to establish a home on the fertile lands of Africa, where he could live under a government of and by and for his own people.

Dr. Jones says that the temperature in Liberia ranges between 64 and 98 degrees and that he plants sweet potatoes 12 times a year—one each month.

Liberia lies on the southwest coast of Africa between British Sierra Leone on the west and the French colony of the Ivory Coast on the east, with a coast line on the south Atlantic of about 350 miles. It extends inland 75 to 150 miles. Most of the country is densely forested, rich in timber and in oil nuts. Plantings of about 10,000,000 rubber trees, representing an investment of about $90,000,000 are financed by the Firestone Tire Co.

The population of Liberia is entirely of the African race. The constitution provides that no white man can own land or vote in the Republic. The number of American Negroes colonized there is estimated at 20,000.

Liberia was founded in 1822 as the result of a movement by the American Colonization Society organized in Washington, D. C., in 1817. At the time this society was organized there were about 200,000 free colored people scattered throughout the Union. They enjoyed then, as now, few of the advantages of freedom. It was thought by the American Colonization Society that if a colony for the freed Negroes of the United States could be established in the land of their origin, they might, in time, with proper care and patronage by the Federal Government, become a self-supporting community and thus prepare a way of life and a home for the eventual colonization of the remaining millions of slaves who were destined to be given their freedom from slavery.

The sole purpose of the organization was to promote the cause of Negro repatriation. Land would have to be acquired for a colony, and ways and means for its settlement would need to be formed. The organizers realized that the task would be too great for a group of private citizens to undertake, so the society sought and obtained the aid of the American Government in its program. The society purchased practically all the territory that now forms the Republic of Liberia, and the first group of Negroes were transported to that country in 1822. The American Government cooperated with the colonization society and from time to time landed its recaptured slaves from vessels engaged in slave traffic in the territory of Liberia.

Within a quarter of a century the Liberian colony had so succeeded and progressed that it was able to stand on its own feet and declare itself a republic. The declaration of Liberian independence is dated as of July 26, 1847. It is a document so fraught with human appeal, so clearly indicative of sincerity of purpose that the reading of it suffices to convince the skeptical that the West Coast of Africa is the proper place of haven for the members of the black race now in this country.

Notwithstanding the severance of ties between the settlements of the Republic of Liberia and the American Colonization Society, the parent organization continued to keep in touch with the Republic and to cooperate in directing its destinies. The society was unable to take care of all who desired to migrate to their ancestral Africa, because the volunteers were in greater numbers than the society could accommodate. Vicious attacks were made on the society from certain quarters, just as my proposal has been viciously impugned by some. Despite these attacks, the American Colonization Society continued to make progress until Negroes to the total number of 12,000 had been resettled in Liberia. Among the men who were members of this organization were Francis Scott Key, John Randolph, Thomas Jefferson, James Madison, Charles Fenton Mercer, John Marshall, Andrew Jackson, Daniel Webster, Henry Clay, Abraham Lincoln, James Monroe, and many others. It will be remembered that Monrovia, capital of Liberia, was named for President Monroe, who was an active member of the American Colonization Society when Liberia was founded. That society still exists, with headquarters in Washington. Colonel West, who now heads the organization, has made frequent trips to Liberia and is among the stanchest of modern advocates of Negro repatriation.

The first recorded effort to bring about colonization of American Negroes in Africa was by a committee in the General Assembly of Virginia in the year 1777. Thomas Jefferson was chairman of that committee. It reported favorably on a resolution for the emancipation and subsequent colonization of Virginia slaves. It contemplated the acquisition of territory, a gradual enforcement of the plan, not only to establish Negroes in a territory of their own but to support them until they could sustain themselves. This was Jefferson's plan in 1777, the year following the penning of the Declaration of Independence.

Jefferson spoke and wrote more fluently and more profoundly on the Negro question than did any other man of his time. On numerous occasions he entreated his countrymen, with prophetic vision, to seek by emancipation and repatriation to evade national economic disintegration and racial decline which, it now appears, may overtake us. But in spite of his frequent utterances warning the Nation against the evils that would ensue where two widely different races, equally free, were compelled to live side by side, the opposition of his day appealed to the author of the Declaration of Independence in support of the theory that the Negro should be recognized in this country upon terms of absolute equality with the white man.

The written works of Jefferson are replete with evidence that he did not include the Negro when he said, "All men are created free and equal." His expressed views on the subject, from the date he penned the classic Declaration of Independence up to the time of his death, all serve to countermand the suggestion that Jefferson had thought of the Negro enjoying equality with the white man. The following single extract will refute the claims of those who clamor for equality between the two races:

"Deep-rooted prejudices entertained by the whites, 10,000 recollections by the blacks of the injuries they have sustained, new provocations, the real distinctions which Nature has made, and many other circumstances will divide us into parties and produce convulsions which will probably never end but in the extermination of one or the other race. Nothing is more certainly written in the book of fate than that the two races, equally free, cannot live in the same government. Nature, habit, and opinion have drawn indelible lines of distinction between them. Provide an asylum to which we can, by degrees, send the whole of that population from among us and establish them under our patronage and protection as a separate, free, and independent people in some country and clime friendly to human life and happiness. I leave this to those who will live to see their accomplishment but I leave it with this admonition—to rise and be doing."

The impression prevails in the minds of some people that my proposal for the repatriation of the Negro is a product of so-called "southern prejudice." The fact is that my record of more than 20 years in public office, including 8 years as Governor of Mississippi, will confirm the statement that I have always dealt fairly and sympathetically with the Negro.

We have today about 12,500,000 Negroes in the United States; more than 8,000,000 of these live in the South. It has been the southern man who has had to deal with and attempt to solve this race problem. The low status of this part of our population is one of the South's greatest burdens and has been the cause of the South's backwardness in industrial development. It has been the source of much of our crime, our poverty, our disease, and our being labeled throughout the Nation as its economic problem No. 1.

Before the Civil War the white laboring man of the South had to compete with slave labor, and the poor white man of the South had little chance. After the Negro was freed he was more or less dependent. He was unaccustomed to his physical freedom; he was like a ship without a rudder. He was willing to work for almost any wage. This placed the white laboring man of the South in competition with the Negro freed labor of the South.

But with the wage and hour law now on the statute books, with the resultant increase of wage scales in many industries, the white man can now afford to accept many of the jobs which the Negro has been filling and at least partially maintain his standard of living. This changing condition forebodes that millions of Negroes are likely to lose their jobs to white men.

Negroes all over the country know what it means to be outstripped by the white men in competition for jobs. There is more of a certain kind of equality enjoyed by the Negro in the North, but he finds that there is less mutual understanding. Most of the trade unions in the North, as in the South, devise methods to exclude the Negro. Railroad brotherhoods deny him membership. The congenital feeling of inferiority of the colored man, the lack of native ingenuity together with the unbridgeable difference between the two races that will continue to exist so long as they exist as distinct races, all arise to thwart the Negro wherever he goes in America.

Three hundred years of contact with the white has bestowed on the Negro race a degree of superimposed learning and artisanship which can prove a blessing in carving a future for the individual in his fatherland. This being true, the American Negro has gained something by way of compensation from his sojourn in a white man's land. Repatriated in an environment intended by the Creator to be the home of the black man, the American Negro would have an opportunity, as Thomas Jefferson so aptly expressed it, "to carry back to the country of his origin the seeds of civilization, which might render his sojournment and suffering here a blessing in the end."

Educational facilities here for Negro children are not as good as we might wish to see. There is a growing discontent among the Negroes because schools for the colored are not the equal of the white schools, in the South. The Negro complains that his schools are the poorest in the country; that housing accommodations for colored pupils are neglected; that colored teachers are poorly trained.

I am one of a large number of sympathetic southerners who sincerely wish we could do better educationally by our young Negroes. But there are so many of them. By nature a prolific race, the Negro in the balmy Southland perpetuates at so rapid a rate that our public-school systems are constantly faced with new problems in providing schooling for the rising generation of colored pupils. Notwithstanding the high mortality of the Negro race—60 percent higher than that of the white race—the net gain in Negro population over a period of 10 years is about 13.6 percent, based on the period of 1920–30.

In my State we have 100,000 more colored children of school age than of white school children. It seems ironic that we have only 6,000 colored teachers as compared with 10,000 white teachers. The ratio appears inversely proportioned, and it is. On the other hand, it must be borne in mind that the bulk of the tax burden falls on white shoulders. A relatively small percentage indeed is paid by the Negro population. All things considered, we have done as well as we could reasonably afford to provide education for colored children and hospitals for the Negro and his family.

All the education in the world, however, cannot erase the physical and mental differences that divide the two races. The "color line," while serving as a deterrent to intermarriage in regions where it is enforced, cannot prevent illegal miscegenation. The facts speak for themselves. The most authentic records reveal, and one has but to look around among the colored population to see, that about one-third of the negroid citizens of our country are Negroes with white admixtures—mulattoes, quadroons, and octoroons. Nineteen States in the Union and also the District of Columbia even give legal sanction to intermarriage between the blacks and the whites.

It has been stated by good authorities that there are today about 20,000 Negro boys and Negro girls annually crossing the color line. That is to say, a Negro boy is a mulatto and looks white, so he goes where he is not known, and marries a white girl. The mulatto, or white-colored girl, goes where she is not known and marries a white man. Who, then, in the face of this, can say that we are not gradually heading for eventual amalgamation unless steps are taken for the physical separation of the two races?

An example of a proud civilization that crumbled and decayed as a result of becoming a mongrel race is ancient Egypt. In the beginning the Egyptians belonged to the Caucasian Race. Contact with the Negro through invasion of Negro territory and the introduction of Nubian slaves and soldiers in Egypt created the Egyptian hybrid. Stagnation overtook this once great empire and its civilization perished, reaching a climax finally in the accession of the mulatto pharaoh, Teharka, to the throne in 688 B. C.

I agree with the ethnologist, Madison Grant, that "if the purity of the two races is to be maintained, they cannot continue to live side by side, and this is a problem from which there can be no escape."

One reason some of my colleagues and other public men are afraid of the proposal for resettlement of American Negroes in Africa is that they regard it as fantastic, too visionary, too big a job. But it occurs to me that when millions of American Negroes are begging Congress to give them an opportunity to avail themselves of the land which is now waiting for them, held in trust by the Republic of Liberia, it is better sense, better judgment, and better business for the Government to pay for their transportation and upkeep until they are well on their way to being established in their new home. It would certainly be cheaper and better to care for them in that way than to let them stay in the United States and keep them indefinitely on the relief rolls.

If for no other reason than the preservation of blood integrity of the two races, repatriation of the Negro seems to me to be the only feasible solution of the race problem. I cannot think otherwise when I consider the established facts covering a period of 20,000 years, showing that whenever and wherever the white race and the black race have tried to live side by side, the blood integrity of both races has been destroyed and a mongrel race has inevitably followed.

There is nothing fantastic in the plan of repatriation of Negroes; and in putting it into effect we would simply be carrying forward the program of Thomas Jefferson, Abraham Lincoln, and many other thoughtful statesmen of bygone days. We would simply be carrying to fruition the plan that the Great Emancipator pledged himself to carry out, the thing that he would have done had he lived to do it: "Let us be brought to believe that it is morally right and at the same time favorable to our interest to transfer the African to his native clime, and we shall find a way to do it, however great may be the task."

As Taft Views It

EXTENSION OF REMARKS

OF

HON. FRANCES P. BOLTON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, June 3, 1940

EDITORIAL FROM THE SIOUX FALLS (S. DAK.) DAILY ARGUS-LEADER

Mrs. BOLTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Daily Argus-Leader of Sioux Falls, S. Dak.:

[From the Sioux Falls (S. Dak.) Daily Argus-Leader]

AS TAFT VIEWS IT

Crashing prominently into the foreground these days in the thoughts of countless Americans is the official attitude this Nation should assume toward the war in Europe.

Few go so far as to suggest that we should send our armies across the Atlantic to participate in the battle.

Between the point of actual participation in the war and that of absolute neutrality, however, lies a confusion of thought.

Some persons believe we should extend credit to the Allies, permitting them to buy freely in this country without worrying too much about how and when payment is to be made. Others contend we should share with them whatever military secrets we may possess. Still others say we should give them all the supplies we can possibly provide but that we should not send our men to Europe.

Senator ROBERT A. TAFT discussed this subject in a thoughtful speech a few days ago. In a summary of his address, a Christian Science Monitor correspondent enumerates the basic points of his (TAFT'S) philosophy in the following paragraphs:

"1. In modern war, he believes, the victor will emerge as exhausted as the vanquished.

"2. The United States, he contends, cannot help the Allies partially without entering the war wholly. 'If we are justified,' he says, 'in spending billions for the Allies and supporting their navies, then it would be cowardice not to support them also by men. If we admit that our safety and defense are at stake in the European war, then we cannct go halfway.'

"3. To him going to war would not preserve democracy for the world and would lose it for the United States.

"4. Even if it should so desire, he estimates, the United States, already in a vulnerable financial situation, is not able to provide effective assistance to the Allies, since it has no army to send to Europe, no adequate volume of airplanes, no sufficient material.

"5. Germany, he believes, would have neither the strength nor the need to attack the Western Hemisphere.

"6. When peace is once restored, he asserts, the United States could trade as well with Germany as with Great Britain.

"7. The seriousness of the situation produced by a German victory cannot be ignored, he realizes. It involves the possibility of a German, Italian, and Japanese alliance. It would require a change of the country's entire foreign policy. It would mean a world widely ruled by aggression and totalitarianism. It would require vast expenditures annually for armaments.

"8. Senator TAFT agrees that the prospects mentioned in the foregoing paragraph would have to be faced, but even that alternative

seems to him preferable to any industrial and financial assistance to the Allies—beyond cash-and-carry commerce—which might bring the United States into war."

It is the Argus-Leader's suggestion that all persons weigh deeply the policies that TAFT has enumerated. TAFT is a man who speaks carefully and the fact that he is a candidate for the Republican nomination for the Presidency does not warp his viewpoints. Those who know him well insist that he would be expressing his thoughts in exactly the same way if he were a plain citizen of Ohio with no political ambitions.

The point he brings out in paragraph 2 in the classification of his views is particularly significant. If this is our war as much as it is the war of England and France, then it is quite clearly nothing short of cowardice on our part to refrain from a full participation. And if it is not our war, then why should we support the Allies?

Senator TAFT, it seems to the Argus-Leader, has outlined in an effective fashion a policy that is fundamentally American and basically sound.

In some circles in the East it is being sharply criticized. But the critics are primarily persons who believe that this is our war and that we should be fighting shoulder to shoulder with the Allies. Naturally, they object to an opinion that suggests nonparticipation directly or indirectly on the part of the United States.

Our Defense Policy and the Arms Program

EXTENSION OF REMARKS

OF

HON. LESLIE C. ARENDS

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 3, 1940

EDITORIAL FROM THE BLOOMINGTON (ILL.) PANTAGRAPH

Mr. ARENDS. Mr. Speaker, under leave to extend my remarks, I include a very fine editorial taken from the Bloomington (Ill.) Pantagraph, the largest paper in my district.

With world conditions as we find them at this very moment, it is high time that a definite defense policy of the United States should be pronounced to all our citizens. It seems we are in total agreement that we must immediately have larger and better equipped armed forces for defense. No doubt remains but that Congress expects to carry out the wishes of our people through adequate appropriations for that purpose.

Not only the Congress, but all citizens of this great country of ours, should be fully informed and have a clear and complete understanding as to what we are to defend and how we are to defend it, if these great sums of money are to be wisely and intelligently spent.

Let us prepare to the fullest degree to defend our Nation, but we cannot afford to rush off in any direction without first knowing how and when we expect to get there. This is no time for experiments or mistakes. Our objective should be clear and concise; then we can build toward that end.

The editorial follows:

PRESIDENT SHOULD ANSWER ONE PERSISTENT QUESTION

Thomas E. Dewey's speech in Dallas Monday night again called attention to the greatest weakness in Mr. Roosevelt's arms program—his failure to exactly define what our defense policy should be.

The Pantagraph has made this point again and again since Mr. Roosevelt first called on the Nation to support increased armament.

Mr. Roosevelt's continued silence is disturbing. It would be a simple thing for him to say our new arms should never be used by us for anything except defense of the Western Hemisphere. He could then elaborate this policy within the framework of the Monroe Doctrine, pointing out specific weak spots in our defense framework and committing us to their defense if threatened by any power. This would help allay the fears of millions of Americans who favor arms for our defense but not for Europe's wars.

Why is Mr. Roosevelt willing to let these fears go unanswered?

It is not lack of understanding. He has shown again and again that he understands the American public mind as no other man in public life. No; Mr. Roosevelt is fully aware that this fear exists.

It cannot be lack of courage, as he has proved his courage in public affairs many times.

What can the reason be?

We can think of only one answer.

We know there are many ardent interventionists on the Atlantic seaboard who favor sending an army immediately to help the Allies. We know on the west coast there is another group of interventionists. We know that in between these extremists are millions upon millions of Americans who remember the folly of 1917 and do not want it repeated.

Mr. Roosevelt hopes to remain personally popular with these divergent groups by means of the one thing they agree about—the need for increasing our own arms.

He does not want to cross the interventionists by coming out frankly for Western Hemisphere defense.

He does not want to cross the great mass of the American people by committing himself to a war in favor of the Allies.

We do not know what to call this unless it is a particularly obnoxious brand of personal politics.

Mr. Roosevelt knows he does not have to play politics to get support for rearmament. It is merely his own popularity that he hopes to enhance by remaining silent.

This is using the surge of alarm over the Nation's security in a most unworthy manner.

Again we express the hope that Mr. Roosevelt, in the name of the national unity he so readily invokes, will give the people a detailed, specific statement of his defense policy.

It is not time for cute tricks or slick silence.

The Best Defense of American Democracy Is To Broaden the Tax Base

EXTENSION OF REMARKS

OF

HON. BRUCE BARTON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, June 3, 1940

Mr. BARTON of New York. Mr. Speaker, the best contribution this Congress can make to national defense is to broaden the tax base so that every man and woman from the richest to the poorest may have the duty and privilege of making a direct financial contribution to America.

Probably not again in our lifetime will the opportunity for such action be so propitious. Our people today are in a mood for self-sacrifice. The desire to do something, to give something is well-nigh universal. The administration far underestimates the Nation's patriotism if it shrinks from enacting the right kind of tax measure now for fear that the people will resent such action at the polls. In the willingness to render unselfish service the public desire today is far ahead of the politicians' realization.

The people are hungry for the truth. No politician has yet had the courage to tell them the truth about our internal weakness. They have never had the fact pointed out to them that America is in the precarious position of an inverted pyramid. At the bottom of the pyramid is a little group of 3,000,000 citizens who pay an income tax and so have a personal financial interest in sound and economical government.

The top of the pyramid consists of several millions of men and women who put nothing directly into the Treasury but, in one way or another, take out. In between these two groups is the middle class, once called the "backbone of America," which neither puts in nor takes out, and so is far less concerned than it should be with the management of our country, or the selection and conduct of its public officials.

This inverted pyramid with the few contributors at the bottom and the huge masses of beneficiaries at the top is a menace to the free government. We cannot hope permanently to preserve democracy if only a handful of citizens are conscious of the cost of democracy; we cannot, in any period of severe national crisis, keep that inverted pyramid from crashing into fragments which can only be gathered up and welded together again under the iron hand of dictatorship.

In the free frontier days when national income was increasing by leaps and bounds and the cost of national government was small, it mattered little what the taxes were or how they were distributed. The Government's functions were few and far removed from the daily life of the citizen, and national revenues came largely from tariffs and excise taxes. No one felt burdened. No one was conscious that when the Government spent money it was spending his

money. The public Treasury was traditionally a generous grab-bag; citizenship in America, and membership in any organized group with sufficient votes to make its voice heard, constituted a license to take out of the common fund for one's own community, section, or group. Representatives were elected and sent to Washington in the expectation that each one would do well financially for his own constituents; and reelection too often depended on success in bringing home the bacon.

The American Congress is made up of able, patriotic men. There has never been a time in our history when its Members were not honorably representative of the best ability and purpose of the people. It is an American tragedy that these Representatives, even the ablest of them occupying the most important positions in the Congress, are, to greater or less degree, dependent for their reelection on the amount of appropriations they can secure for their individual districts. The tragedy is deepened by the fact that the non-tax-paying pressure groups are so great in numbers and so well organized that the political life of the representative depends more and more upon their favor.

This situation could, to some degree, at least, be cured if every man and woman in this country were to make an income-tax return and payment to the Federal Government. Even if the tax, in the case of the least fortunate citizens, were only a penny or two, even if the cost of collecting the tax were five times more than the amount received, the principle of universal contribution would be established. And with it would come new, lively, and critical interest in the conduct of our Government, in its cost, and the public record of its officials.

Today the Member of Congress goes back to his district and is asked, "Why didn't you get a new post office for our town? Mr. X, in the next district, got one for his." The question should be reversed. Mr. X should be asked, "Why did you induce the Congress to appropriate part of our money for a new post office when the old post office was plenty good enough?" And he should be asked that question, not by the handful of well-to-do constituents who now pay income taxes but by the whole community.

This Nation of ours is much farther down the road that leads to fascism than most of us have had the wisdom or the courage to admit. The Seventy-sixth Congress, meeting under the administration of Franklin Roosevelt, may very possibly be looked back on by historians as the beginning of the end of the American experiment in democracy. Preceding New Deal Congresses had created the centralized bureaus and agencies which are the mechanics of absolutism; they had piled up the kind of debt that, when it topples over into financial chaos, creates the conditions that have usually resulted in one-man power. Thus the Seventy-sixth Congress found the progress toward one-man government already well under way.

We are hastening that progress. We are necessarily voting to the President extraordinary powers. We are necessarily setting up the machinery for the regimentation of industry, agriculture, and labor. These are the inevitable accompaniments of war preparation in a world where war now requires the total effort and capacity of the Nation. To these dictatorial powers and this regimentation of resources we are adding the menace of an incalculable public debt. Under the spur of national danger and the appeal for defense we are voting billions and hardly stopping to ask how many, or for what.

In the Washington Post of Saturday, June 1, two headlines appeared in juxtaposition. One of them read:

House Ways and Means members favor additional billion in defense taxes.

The other read:

Day's receipts of Red Cross total $14,311.

More than 2,000 volunteer workers, representing the patriotic leadership and devotion of the District of Columbia, had succeeded in gathering $14,000 as a free-will offering for the Red Cross in 1 day, a total of $72,000 since the campaign began.

Seventy-two thousand dollars extracted from the budgets of the generous residents of the District; contrast that total in real money against the billions in debt money which Congress is appropriating.

The richest university in this country is the President's alma mater, Harvard. It was founded in 1636. For 304 years it has been building its endowment, soliciting gifts from its successful alumni during their lives, and begging to share in their estates at their deaths. How much has Harvard managed to accumulate in 304 years? One hundred and forty-three million dollars, a pittance compared with our current appropriations in a single hour.

How much has Yale managed to accumulate in its 239 years? One hundred million four hundred and twenty-eight thousand dollars.

How much has Columbia University managed to accumulate in its 186 years? About $87,000,000, including the endowments also of Barnard, Teachers College, and New York Post Graduate Medical School.

The united hospital fund of the richest city in the world, New York, provides in part for the annual deficits of 92 privately endowed hospitals. More than 5,000 leading citizens neglect their livelihood for weeks and pour their energies into the effort for this fund, and how much do they raise? About $2,000,000 a year.

The Greater New York fund seeks annual contributions for the citys' 393 health and welfare agencies. It enlists the cooperation of 40,000 business concerns throughout the greater city, with their 3,000,000 employees. How much does its heroic effort manage to raise? About $4,000,000.

Any sane man who contrasts our huge congressional appropriations with the comparatively meager amounts of endowment and philanthropic funds which I have instanced must realize at once that the money that government appropriates is not the same kind of money that private effort slowly and painfully accumulates. In other words, the money we are appropriating in Congress is inflated money. Whether you call it inflated or not, that is what it is. The debt now piling up at the rate this year of more than $4,000,000,000, and not counting the President's special budget for defense—this debt can never be paid in honest money. Only by inflating the hard money of the country can we pay these inflated debts, only that way or through repudiation.

Inflation or repudiation leads to dictatorship. At least that has been the uniform testimony of the past. Will history repeat itself over here? Not necessarily. Our national resources are great, our people are not merely highly educated—the Germans were also highly educated—they are endowed with the tradition of freedom, and fired by a hatred of being regimented and bossed.

They can, if they will, prevent fascism over here. But to do that they must be keenly conscious of and responsible for the economical management of their public affairs. They must feel that the Government is their Government, that its policies are their policies, and that when it appropriates money it is appropriating their money. They must be eternally vigilant, alert, and critical. They must develop a new standard by which to measure the effectiveness of public service, a standard based on preserving the Nation's resources, not squandering them at the behest of a local constituency or pressure group.

If we can educate the American people along these lines, if we can develop in them the desire to give something to America in place of an organized effort to get something from America, then and then only can America be defended. The raw materials for fascism lie all about us—mounting debt, centralized control, regimented industry, agriculture, and labor. Only one power is strong enough to save us—a united love of America sufficient to make people willing and eager for self-sacrifice. That spirit is at the moment alive in the land. More people are moved by it to a higher degree than at any time since the World War. Let us not neglect or throw away the golden opportunity thus presented.

Let us seize this chance to write a tax law which, while greatly increasing the tax burden of the more favored, will call on every citizen to contribute according to his or her means and thus help to inspire in every citizen, from the highest to the lowest, a vigilant regard for national solvency, a critical interest in national policy, and a vigorous resistance to every encroachment of one-man power.

Investigation of National Labor Relations Board

EXTENSION OF REMARKS
OF
HON. ABE MURDOCK
OF UTAH
IN THE HOUSE OF REPRESENTATIVES
Monday, June 3, 1940

Mr. MURDOCK of Utah. Mr. Speaker, in the last 2 weeks there has been inserted into the RECORD a number of editorials appraising the activities of the National Labor Relations Board and the Smith Investigating Committee. Naturally, the newspapers carried varied comments. To rectify and round out the editorial picture drawn in the RECORD of May 24 and 28, I call attention to the following printed expressions of those most concerned with the activities of the Labor Board—labor organizations, specialists in labor affairs, and newspapers in localities which have seen and felt in the past the human and economic costs of industrial strife. Here are some excerpts:

Labor, the weekly spokesman for more than 1,000,000 railroad employees:

Last autumn Chairman SMITH became ill and turned the direction of the committee over to Toland.

Since then, at frequent intervals, Toland, or someone under his direction, has been feeding the newspapers stories designed to arouse prejudice against the Labor Board, before a witness had taken the stand.

This same disposition to get the Board was clearly manifest during the opening hearings. Instead of endeavoring to present a well-rounded picture of the situation, Toland has assumed the role of prosecuting attorney—the Board's weaknesses have been played up, its good work minimized.

Further, from Labor:

At its recent convention in New York the National Association of Manufacturers called for the drastic revision of the Wagner Act and the Wage-Hour Act. In support of that proposal the convention declared:

"For 6 years the Nation has been subjected to a national labor policy which has provoked more strikes and disputes than have occurred during any comparable period in our history."

That statement doesn't happen to be true. For the 6 years, 1933–38, inclusive, the Labor Department reports 15,249 strikes. For the 6 years from 1916 to 1921, inclusive, the same authority reports 21,018 strikes. The periods are fairly comparable, because both were marked by extremely abnormal conditions.

If the statement were true it would not prove that the Nation's labor policy—which, by the way, has been sustained almost 100 percent by the Supreme Court—imposed unwarranted hardships on any class.

A majority of the strikes during the last 6 years have been caused by the refusal of employers to obey a law which guarantees to the workers the right to organize free unions. That's practically all there is to the Wagner Act. Having failed in the courts, the lawbreakers now ask Congress to hamstring the law.

I turn now to the comments of labor periodicals which represent more than 300,000 workers. These excerpts were chosen because each one of them speaks with a background of at least 40 years of effort in behalf of such law as the National Labor Relations Act.

Official Magazine, International Brotherhood of Teamsters, Chauffeurs, Stablemen, and Helpers of America:

No one can deny the fact that the Wagner Act was the greatest piece of progressive, liberal legislation ever enacted in behalf of labor. Some will deny it because of their personal, bitter, selfish, political hatreds—narrow-minded individualists who, through some accident or sharp practice, are sometimes chosen to represent labor. Yes; a few of this type, who are politically blind and thoroughly bigoted, may deny the service or the good obtained as a result of the enactment of this legislation. But those of us who lived in the early days and struggled for the right to become a member of a union, those of us who went through fires of persecution and discrimination to the extent that we were kicked around from place to place and blacklisted because it had been found out through spies, tools, enemies of the workers, that we were members of a labor union * * * those of us who can look backward and those of us who can read the history of the struggles of labor intelligently, we fully understand the benefits obtained and the freedom enjoyed today by the workers; and no small part of this freedom has been obtained through the enactment of the National Labor Relations Act.

Pattern Makers' Journal, official organ of the Pattern Makers' League of North America, affiliated with the American Federation of Labor:

Let the act stand as is. * * * Opening the Wagner Act for amendments at this time will play into the hands of reactionary employers and labor baiters. The A. F. of L. may be seeking minor changes to correct inequities, but nothing short of complete emasculation will satisfy the enemies of labor once the act is opened for amendments.

We do not subscribe to the idea of killing a fly on a plate glass window with a sledge hammer. It is unwise to become that angry with anybody or any law.

The International Association of Machinists, likewise affiliated with the American Federation of Labor:

Now that it has published a report and presented a bill which reveals the true motives of the majority of the Smith committee investigating the National Labor Relations Board, labor can no longer have even an iota of confidence in this committee. Presented with a wonderful opportunity to do a statesmanlike job in separating the chaff from the wheat in the complaints that have been made against the National Labor Relations Board, the majority of the committee have now revealed that they had no interest in doing such a job at all and are merely using the high powers entrusted to them by the Congress to propagandize in favor of emasculating the most cherished rights conferred upon workers by the National Labor Relations Act. The chief emphasis in the bill and in the report submitted by the majority of the Smith committee is placed on amendments which would nullify labor's rights and curb the power of the Board to act in labor's behalf. It is little wonder, therefore, that the spokesmen for the United States Chamber of Commerce and the National Manufacturers' Association have made gleeful and commendatory comments on the Smith bill.

The Brewery Worker, published by the International Union of United Brewery, Flour, Cereal, and Soft Drink Workers of America:

The record of the National Labor Relations Board before the United States Supreme Court indicates that it is not the body of incompetent, unfair, and misguided zealots certain individuals and organizations would have us believe. Twenty-two cases, involving either the Board's orders or its procedure, have now been adjudged by our highest court. In 18 of these, including the 3 very important ones decided last week, the Court completely upheld the Board. In two others the decision was partially unfavorable to the Board, while in the remaining two, and only in these two, were the Board's orders reversed, with no evidence of maladministration.

These were all cases in which the administration of the Labor Act by the Board was impugned—in which it was charged that the Board had disregarded provisions embodied in the act, had taken matters into its own hands, regardless of the spirit and intent of the law.

The fact that the Supreme Court found otherwise in all but two of the cases is irrefutable evidence that the act has been fairly and honestly administered.

Specialists in labor, from coast to coast, in the course of their duties have watched the everyday activities of the Labor Board for the last few years. Here are two excerpts from such observers, one from Boston, Mass., and one from San Francisco, Calif.:

The Christian Science Monitor:

Has the National Labor Relations Board reduced strikes or increased them? * * * One fact is apt to be forgotten in after-dinner arguments about the Board—that its jurisdiction is sharply limited. It can take no part, and hence has no responsibility for strikes that are not interstate in character; nor can it intervene in cases outside its own field; disputes over the right to organize; antiunion discrimination and the like. The hope that it may promote industrial peace must be limited to the region where it has jurisdiction.

Statistics seem to show that in this particular field the decline in strikes has been most marked. Organizational strikes, which previously amounted to 50 percent, have tended to decline and the number of cases filed with the Board has steadily increased, giving the hope that legal processes are replacing the picket line.

Thus about the best reply that can be made to the flat assertions of Messrs. Frank and Wagner is that a recent trend has been established, of great potential importance toward dropping the strike weapon in organizational cases, for orderly processes of law.

The San Francisco Chronicle:

N. L. R. B. Chairman Madden might get a better press if he would take the stand before the special Smith committee of the House investigating the Wagner Act and shout: "Congressman SMITH burns down orphanages."

That would be fighting fire with fire, meeting a left with a left and a gouge with a gouge. It would be adopting the tactics and weapons and methods of the Labor Board's most vehement attackers for the past 4 years.

Instead, because this is an agency of the United States Government which is building a body of law and custom in the most controversial of all domestic fields, Chairman Madden must laboriously trace the record N. L. R. B. and act have made. Against the most injudicious charges, he must not lose his judicial calm.

The unfair thing about this entire situation is that it is much easier to remember the charges made and tall tales told about the Labor Board and its staff than it is the denials.

The side show gets the trade.

It has been getting it for 4 years. All the while there is a perfectly accurate, documented, buttressed, tested, and voluminous record which would establish the fakery and freakishness beyond question. There are now four annual reports, with statistics, tables, and charts, to support the analysis and conclusions to which the Labor Board has come in handling 25,000 cases.

There are numerous articles in the law reviews of a large number of universities throughout the country. Board practices, procedure, and principles are given a thorough workout, not by attorneys who are parties in interest in Board cases, but by students of law and others. The vast majority of these will be found favorable to the manner in which the Labor Board has conducted itself and applied the new law in a most controversial field.

The American Civil Liberties Union, which scrutinizes every action and decision of the Board, in its concern for the preservation of basic civil rights states:

Nothing in the National Labor Relations Act curtails an employer's right of free speech. * * *

The act stands as the greatest single advance yet made in guaranteeing to workers their rights to form unions and to select representatives for purposes of collective bargaining without interference by employers. It cannot be too strongly emphasized that it is in this field of industrial conflict in the light of the traditional and violent opposition of employers to trade unions that the major issues of civil liberty have arisen. The act in its few years of operation has vastly reduced the resort to violence and coercion, with consequent deprivation of civil rights, and greatly increased the free exercise of labor's rights to organize.

Historians have sufficiently traced the bloody course of industrial strife in the United States, especially in the States of Pennsylvania and Kentucky. I need not recall for you the Homestead massacre nor Harlan County; but I call your attention to two editorial excerpts emanating from these States:

The Allentown Call:

That progress is being made in labor relations is indicated in the peaceful manner in which more than a hundred thousand General Motors workers conducted their recent election, decided that 49 out of 60 plants should operate through the C. I. O. as a collective bargaining agency, and gave promise that there would be less conflict between the two big groups of organized labor which contested the right to be such bargaining agencies.

Four years ago the story was different. At that time the C. I. O. did not have anything like a majority of the workers under its wing. It could not risk an election. Then it adopted the un-American technique, the sit-down strike, which in many instances was accompanied by sabotage.

That action brought so much unfavorable public opinion and threatened so much that was valuable not only to our institutions but also to labor itself that it was outlawed. The day of the sit-down strike was over.

How much better for management, men, and the public that by the use of the ballot issues shall be decided.

Here are the central theme and conclusion of a full-page editorial appearing in the Louisville Courier-Journal:

The theme:

STRIKES DECREASE

For 2 years after the passage of this act the N. L. R. B. was helpless, paralyzed by injunctions. It became effective only after the Supreme Court upheld validity of the act, so its 5-year record really covers only 3 years of genuine activity.

Up to February 1, 1940, the Board handled 25,968 cases involving 5,805 workers. Of these 22,402 were closed. Fifty percent were closed by agreement; 16 percent dismissed by the Board of regional directors; 22 percent were withdrawn; 7 percent were closed by Board decisions.

The statement has been made, apparently unchallenged, that 42 percent were decided in favor of the employer.

In the same period, the Board intervened in some 2,614 strike cases and settled 1,973, or 75 percent. It averted 806 strikes; and held 2,630 elections affecting over a million workers.

The trend of strikes is definitely downward. The decrease last year was one-third.

Man-days of idleness caused by strikes decreased from 28,424,808 in 1937 to 9,148,273 in 1938, or about 68 percent.

The conclusion:

The Wagner Act is the Maginot line of labor's fight for freedom to organize, just as employers organize into corporations.

The report of the majority of the Smith committee is useful in that it brings into focus the whole field of labor relations, and projects clearly the fundamental issue: Shall labor retain its hard-won privilege of collective bargaining or shall this privilege be withdrawn at a time when heartening progress is being made in the reduction of strikes and the increase of productivity?

Conservation of Our Soil and Water Resources

EXTENSION OF REMARKS

OF

HON. JED JOHNSON

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 3, 1940

Mr. JOHNSON of Oklahoma. Mr. Speaker, direct flood damages in the United States exceed $100,000,000 annually. Indirect flood damages cannot be accurately estimated, wherein the loss of human lives runs into the thousand annually, and where there is a loss of millions of tons of productive soils, and the constant threat to health, and insecurity to the millions of our citizens living along the fertile valleys of the Nation.

In the early settlement of our country, our forefathers, through necessity, naturally set up our villages along the rivers of the country, and through the years these villages have grown and developed into some of the greatest cities in the world. Not only did our first towns spring up along the rivers, but the farmers in the early settlements also settled along the rivers, so that water and fuel, of so vital importance to our forefathers, could be had. These early trends to the river valleys by our forbears in the early settlement of the country are largely responsible for the present high stage of development and density in population of practically all of our river basins.

We know that millions of dollars are lost annually through interrupted transportation of commerce, interrupted communication by mail and wire. May I call your attention to the recent floods in California, in the Ohio and Mississippi Valleys in 1937 and 1938, the floods of the great Southwest of recent years, and only a few weeks ago the floods of Pennsylvania and New York?

The flood losses in life, property, and precious soils are becoming greater each year, and higher crests are occurring on all our streams annually, due largely to the fact that in the development of the country as a whole we are contributing to more water run-off. For decades we have been cutting away our timber, grazing off our lands of vegetation, which formerly had a tendency to hold rainfall on the land until it could penetrate into the soil. There are many other practices which contribute materially to excessive water run-off over the country. For instance, for every mile of grade drainage and surfaced highways in the Nation we have a perfect roof of over 7 acres of land on which no appreciable amount of water can penetrate the soil, and, of course, this water must find its course to the sea by rushing through our stream systems of the country and carrying with it our productive soils that the forces of nature have been thousands of years building for us.

Several years ago when Congress first recognized the fact that flood control was a national problem, it inaugurated its first flood-control program by appropriating funds for the construction of protective works, known as the levee system. These levees were constructed along the lower reaches of our larger rivers. This policy of constructing levees for flood protection against floods was religiously pursued for several years, by and with the approval, of course, of our Army engineers.

Then for years we poured millions of Federal funds on the lower Mississippi and other large streams of the country without success. To some extent the levee system relieved the flood problems in certain areas for a while, but the flood-waters increased and the high-water marks raised from year to year until it soon became apparent that levees, however large, were not the answer to our flood-control problems.

Then along about the year 1930 our most competent engineers began making studies of the stream systems of the country to determine if a more practical solution to the problem could be found.

The findings of this intensive Nation-wide study resulted in the adoption of the 308 report by Congress in 1935, and supplemental studies and reports have been approved by Congress since 1935 until at this time Congress has approved and authorized for construction over $1,000,000,000 for flood-protective works. It is significant that a vast majority of this is for flood-retention reservoirs on the larger tributaries of our heavy flood-producing streams.

This comparatively recent change in the national policy of flood-protective works on the larger tributary streams of the country is step No. 2, and by far the most important in the Nation's efforts to meet these problems in an intelligent manner and really making headway toward solving them. May I call your attention to the fact, however, that up to this time Congress has appropriated but a small percentage of funds necessary to construct the flood-control works that heretofore have been authorized by Congress? If we are to meet and solve this problem during the present generation, Congress must have the vision and courage to make the actual appropriations necessary to corral the waters where they fall.

Although constructive progress is being made in the direction of a flood-control and soil-conservation program for the country, I feel that in our undertakings we should immediately take another important forward step toward the actual solution of one of our Nation's most challenging problems—that of flood control. Up to date we have practically ignored, so far as our flood-control policy is concerned, the serious but ever-pressing problem of soil run-off. I am fully convinced that anyone who has given the matter serious study will agree that if Congress can find a way to stop or materially check soil run-off we will have a most complete and really practical flood-control program. I am also convinced that we will profit by our mistakes and that in the near future our national policy of flood control will be to begin at the top of our watersheds to control soil and water run-off and develop downstream, instead of our past impractical policy of beginning at the bottom and working up.

Much has been said about the alarming rate at which our underground water table is falling. It must be admitted that solution to this alarming problem is to hold the water where it falls and thereby replenish this great underground reservoir so that our streams will again flow the year around, as they did in the early history of the country.

In every instance we must make the most comprehensive studies of the various basins of the country for the development of a flood-control and soil-conservation program that is best suited to the particular locality in which such basin is located, and that all allied benefits to be had are given their full consideration.

By this I mean that while a reservoir system on large tributaries is most desirable in some locations of the country, it is not a solution to the problem in many others. In many instances, it is evident that a tributary reservoir, or even a main-stem reservoir is not the solution to the flood problem that is located several hundred miles below the source of the stream. Large reservoirs are usually most desirable in the mountainous areas of the country, due to the fact that in these areas these reservoirs do not inundate thousands of acres of productive and alluvial lands. Of course, there are exceptions; for instance, where large dams are desirable in order to produce and generate electric power. In the plains section of the Nation, like Oklahoma, the policy of constructing large reservoirs on main streams, rather than upon the small tributaries, would undoubtedly defeat the purpose of flood control by inundating thousands of acres of the most alluvial lands in these areas. So far as Oklahoma is concerned, and this applies also to many other plains States, our national policy, with reference to starting additional flood-control projects, should be generally to construct smaller reservoirs in these basins in and along the headwaters of these tributary streams, so that the maximum of benefits may be had, and the distribution of same over larger areas in their respective basins. Under this system of development many benefits can be realized that would otherwise be lost by the construction of large reservoirs on the main stream and the large tributaries of our stream systems. Recently, I appeared before the Flood Control Committee of the House in support of a real comprehensive flood-control program on the Washita River basin, at which time I pointed out that any flood-control program on that basin must be by the construction of comparatively small dams on the tributaries, and not as the Army engineers have heretofore proposed, by the construction of large dams on the main stream of that river. In considering an all-round flood-control program, there are many outstanding benefits which should be considered.

First. In undertaking our flood-control development program of the Nation as a whole, every consideration must be given to our No. 1 problem of soil erosion, which is very evident in every section of the country. It is in those badly eroded areas throughout the country, where the soil has been depleted by water run-off and wind erosion; where our citizens have lost courage; where school and church houses are falling down, and where the people are drifting to the towns and cities, that has caused so much alarm. I have, in the past, repeatedly called attention to the fact that this Nation is no stronger and no more secure than the productivity of the first 6 or 8 inches of her soil. The very foundations of her free institutions, and even our Government's future security, depend upon our No. 1 resource—the soil.

Second. National defense: Today our Nation is beginning to awaken to the real necessity of a well-rounded national-defense program. What is more important in case of national emergency and war, which God forbid will ever befall us, than uninterrupted transportation and communication for the movement of troops and the implements of war? We can justify millions of dollars in expenditures for flood control and soil conservation in the interest of national defense and the security of the people. Recently this Congress, following the wise suggestion of the President, made one of the largest peacetime appropriations in history to strengthen our war machine against a possible foreign enemy. We were told that this vast amount of public funds is a good insurance policy against foreign enemies, which is true. But I submit that there is no insurance policy against our precious soil when once it is gone. How long are we going to, ostrichlike, stick our heads into the sand and fail and refuse to insure ourselves against an enemy that is ever present in our country—destructive floods and soil erosion? Should any foreign enemy be responsible for the loss of life and property damage that we are experiencing annually through floods and soil erosion, this Congress would immediately and unhesitatingly throw the full resources of this Nation against such an enemy.

Third. Our great problem today is the rehabilitation of a large percentage of our citizenship. In every project undertaken, particularly west of the hundredth meridian, every consideration should be given in this great program to the development of areas into subsistent homesteads for our now-floating population. Much has been said, but little actually done, regarding the migration westward of thousands of our good citizens seeking new frontiers, who, through no fault of their own, have been displaced and driven from their homes, partly by the march of progress and the machine age, but largely by dust storms that follow in the wake of continued droughts in badly eroded areas. Many of these good citizens who have been forced from the farms in these areas are demanding and must be given an opportunity for a self-subsistence which they are not now getting. We have practically no new frontiers left, but there is still space in the West and Middle West for thousands of these people to be rehabilitated in subsistent homesteads by the development of our water resources through irrigation, reclamation, and practical flood

control. This, to my mind, is the only practical and permanent solution for the people who are now our national responsibility. They do not belong on relief rolls, and many are begging for an opportunity to get on small homesteads, to live under their own roofs, and sit by their own firesides.

Mr. Speaker, in the past I have had much to say about our ancient enemy, soil erosion, and no doubt will have more to say about it in the future. I also expect to continue my fight for flood control based on a sane and practical approach. I sincerely hope that this Congress will give these problems serious consideration and immediately throw its efforts and the full resources of the country behind a Nation-wide program to conserve our soil and water so that we may establish with our people, both now and in the future, a sense of security, health, and happiness.

Our Mounting Nondefense Appropriations and the Imperative Need for Retrenchment

REMARKS

OF

HON. LOUIS LUDLOW

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 4, 1940

Mr. LUDLOW. Mr. Speaker, I think the sooner the people of America recognize the hard truth about our national financial situation the better it will be for everybody under our flag. It will make all of us realize what lies ahead of us in work and sacrifice.

In a world where madmen are loose, with enormous potential destructive powers, we must build up our national defenses to the highest state of perfection. I do not believe there is a nation on earth that has any intention whatever of attacking the United States, but I do not know, and I am not taking any chances. I am resolving every doubt in favor of the safety and security of our country, and I am voting for the enormous defense appropriations, and I shall continue to do all I can to help to put America in a state of complete preparedness.

As a member of the Appropriations Committee, I cannot be oblivious to the terrific cost of the defense program and to the absolute necessity not only of facing that problem but of putting our national finances in better order generally. While we are talking of increased taxes and raising the statutory debt limit, I propose that we attack the problem on still another front.

I believe that we should recall all of the 1941 supply bills that will become effective on July 1 and apply a 10-percent horizontal cut to all that can be cut. There would be certain necessary exceptions to such a cut, including the Postal Service, which will require all the money that has been provided to handle the ever-increasing mail; the Army and the Navy; the W. P. A. relief appropriation; the Veterans' Administration; and the interest on the public debt.

But speaking by and large a horizontal 10-percent cut could be laid down without impairing vital governmental operations, and it should be left to the head of each governmental department, bureau, or independent agency to determine how the cut should be applied to his activity.

SWEET ASSURANCE TO THE COUNTRY

I should think that $400,000,000 might be saved in this way, but the great value of such a cutting operation would be psychological. It would be sweet assurance to the country that Washington is facing the situation in a realistic way and is at last giving full recognition to the fact that we are perforce at the threshhold of a new era of common sacrifice. It would be pleasing evidence to the country that we in Congress realize that we cannot have unnecessary public buildings, recreation grounds, deluxe highways, and battleships at the same time. Knowing that Congress is at last alive to the realities and the stark necessity of pursuing a policy of the strictest economy in respect to everything except national defense the country would be better prepared to bow its back to the awful burden of debt to be imposed by the defense program, which gives every indication of mounting higher and higher.

While I have the attention of the House I desire to present some sober reflections on the altitudinal dimensions of our national deficit and some meandering speculations as to where we will land if we continue astronomical appropriations. What I shall say will have no reference to our national defense appropriations, which are in a class by themselves and must be treated as immune from criticism, but with the indulgence of the House I shall point out how I think we have gone wild in respect to other expenditures.

MOUNTING COST OF GOVERNMENT

I propose to discuss a subject which I believe is uppermost in the minds of our people, and that is the mounting cost of government. At the outset I want to make it plain that in every fiber of my being I am a Democrat, in the ancient and long-accepted meaning of that word; an old-fashioned liberal—a Jeffersonian Democrat, if you please—and I forswear none of my cherished and ingrained Democratic principles when I criticize big spending. Rather, on the contrary, I believe that I reassert orthodox and true Democratic principles, for the tutelage of Thomas Jefferson upheld and extolled economy as a primal virtue to be scrupulously applied in government. Our present national administration has done enough fine constructive things to justify an honored place in history, such as its superb handling of the banking situation, the guaranty of bank deposits, the suppression of blue-sky vendors, the saving of innumerable farms and city homes from the sheriff's hammer, and so forth, and so forth, in all of which splendid achievements I have been happy, within my limitations as a Congressman, to be a contributing factor. I yield to no one in my warm personal regard for Franklin D. Roosevelt and my admiration for his noble heart and humanitarian purposes and I am not going to enter upon any hair-splitting dissertation to try to fix the responsibility for phenomenal spending, because I believe the executive and legislative departments are about equally responsible.

But I am fed up on big spending. I have voted against $8,000,000,000 of appropriations during the 11 years I have been a Member of Congress, and as I look backward my only regret is that I did not vote against more of them. I am sick and tired of seeing money scoop-shoveled out as if the Treasury had no bottom. I believe that excessive spending not only atrophies business but weakens our national security and safety. Jefferson held that "public debt leads to misery and decay," and I shudder when I think of the mortgage big spending is placing on our children and our children's children down to the remotest generation. I am genuinely fearful that unless the bunghole is plugged the time is coming when we shall run headlong into the awful evils of (1) inflation, (2) repudiation, or (3) national bankruptcy; and then, unless the brakes can be applied, something still worse.

Whatever justification there may have been at one time for big spending as a stimulant to business and recovery no longer exists. If we have a few more spurts of the spending orgy, business, already in a state of suspended animation, will pass out with as loud a groan as its anemic condition will permit, and recovery, always skittish and hard to catch, will definitely and finally conclude that its place is not around the corner.

WHERE ARE YOU GOING TO GET THE MONEY?

Our national debt has pirouetted upward to staggering proportions, and many thinking citizens, amazed and bewildered by present and continuing demands on the Treasury, are beginning to echo the wonderment of my colleague on the Appropriations Committee, the gentleman from Pennsylvania, Representative BOB RICH, who every day stages a little performance all his own in the House of Representatives. Regularly as clockwork, as soon as the reading clerk concludes his intonation of the daily Journal, the gentleman from Pennsylvania [Mr. RICH] may be expected to rise in his place, strike a bellicose

pose, and call the attention of the House to the rotund proportions of the national debt and the luxuriant growth of the national deficit. Every day witnesses exactly the same exhilarating proceeding. As soon as the gentleman from Pennsylvania [Mr. RICH] begins reading from the Treasury statement, the membership on the majority side starts to give him the "raspberry." As the boos swell in volume, the voice of the gentleman from Pennsylvania [Mr. RICH] correspondingly rises in crescendo. In the final episode, with jeers and catcalls almost raising the roof, the gentleman from Pennsylvania [Mr. RICH] yells in a voice that ordinarily could be heard as far as the Washington Monument, "Where are you going to get the money?" and, having put that shot across the congressional bow, he sits down, his face beaming with satisfaction.

There are fundamentals of government on which the gentleman from Pennsylvania [Mr. RICH] and I never could agree, the irreconcilable differences between a Hamiltonian Republican and a Jeffersonian Democrat, but I join him in wondering, "Where are we going to get the money?" And I shower upon him my warmest accolade for the public service he renders in using his leather lungs to call attention to the Gargantuan proportions of our national debt and our national deficit.

Of that same deficit it may be said that it is so robust and fleet-footed that though we have at present a very broad tax base, our revenues are never going to catch up with it unless somehow we can manage to bring about a miraculous curtailment of expenditures. Our national deficit for the fiscal year 1939 was approximately $3,500,000,000—a sum so stupendous that the finite mind cannot grasp it. If we can realize that this deficit amounts to $1,800,000 for every year since the birth of the lowly Nazarene, we may have an imperfect conception of the extent to which our spending is running away from our revenues. The close of the fiscal year 1940 will record another colossal deficit. Unluckily, there are many Members of Congress who profess to see nothing to be alarmed about in the enormous and growing deficit, and some of them are ingenious and clever enough to figure out in their own minds that it is really a good thing.

PROTECTING THE DEFICIT

The gentleman from Virginia, Judge WOODRUM, who has the keenest sense of humor of all the members of the Appropriations Committee, has a way of paying his respects to Members who flout the deficit by introducing bills carrying vast appropriations. His delicious comment on the introduction of every such measure is:

"Congressman So-and-So is doing his best to protect the deficit."

And that seems to hit off the situation admirably. There is a large school of deficit protectors in Congress, and they are all busy as the proverbial bee. They are found in both political parties. Pork is not partisan.

I do not know how well I shall be able to handle the subject I have tackled—big spending and the uncontrolled deficit—but I would be entitled to the booby prize for dumbness if I did not know something about it, for I have been a part of the appropriating machinery of Congress for a long time, or, to be exact, since March 4, 1931. Some 9 years ago JOHN N. GARNER, then minority leader of the House, and Joseph W. Byrns, ranking Democratic member of the Appropriations Committee, both of whom were successively Speaker of the House in later years, brought about my appointment as a member of the Appropriations Committee. I entered in 1931 at the foot of a committee of 40, and to show how swiftly seniority sometimes operates, it was not long until the seniority rule made me chairman of the subcommittee in charge of what was then the largest of the regular supply measures—the one making appropriations for the Treasury and Post Office Departments. This same seniority rule in which political and physical mortality are basic promotive factors, has brought me up in rank on the full panel of the committee from the bottom to the fourth position, all in a little more than 8 years.

MR. TAYLOR IS 81 YEARS YOUNG

At the head of the Appropriations Committee as its chairman is that seasoned veteran of many political and parliamentary battles, the gentleman from Colorado, EDWARD T. TAYLOR. We on the committee never think of the gentleman from Colorado, Mr. TAYLOR, as being an old man, and if we have occasion to mention his age we say he is "81 years young." He will be 82 on June 19. Notwithstanding his age, he is a two-fisted fighter, a stickler for principle, as courageous as a lion. He is revered by all of the members of the committee. Some years ago a physical disability took him out of Congress for a long spell and it was freely predicted that when his period of hospitalization was over he would be laid on the shelf and would never never be able to resume his congressional duties, but he surprised everybody by the completeness of his comeback. Exactly the same thing happened a few years ago to the gentleman from Alabama, WILLIAM B. BANKHEAD, our present Speaker, who, after a long period of enforced retirement, came back better and stronger than ever. All of which proves the well-known maxim that you cannot keep a good man down.

CANNON'S KEEN MIND

Second to the gentleman from Colorado, Mr. TAYLOR, on the great committee which prepares the supply measures of the United States Government is the gentleman from Missouri, CLARENCE CANNON, who possesses one of the keenest minds with which I ever came into contact. He was Parliamentarian of the House under the late Speaker Champ Clark and is an authority of the highest distinction on parliamentary law and procedure. He is chairman of the subcommittee in charge of agricultural appropriations. Next to the gentleman from Missouri, Mr. CANNON, in committee rank is the gentleman from Virginia, Judge CLIFTON A. WOODRUM, who is chairman of the subcommittee in charge of the independent offices bill, which covers a vast field, and in addition he is the acting chairman of the deficiencies subcommittee. The gentleman from Colorado, Mr. TAYLOR, is the chairman of record of the Deficiencies Subcommittee, but to conserve his strength he has handed over that subcommittee to the younger and superlatively capable Virginian.

JUDGE WOODRUM'S COURTLINESS AND CHARM

In Judge WOODRUM all of the courtliness and charm of the traditional southern gentleman are combined with a dynamic energy and a practical and realistic vision of the fiscal needs of the Government. Next to Judge WOODRUM on the committee is your humble servant, the author of this statement, and the subcommittee of which I am chairman, as indicated above, is the one which has charge over the far-flung activities of the Treasury Department and the Postal Service.

I have already said that I do not know whether I shall be able to do justice to my big subject of big spending, but I should be able to contribute something to the discussion because for years appropriation figures have occupied my mind by day and pestered my dreams by night, to the exclusion of practically all things else. Blackstone or some other legal luminary coined an immortal phrase when he branded the law as "a jealous mistress." Granting that is true, it has nothing on the Appropriations Committee, which is one reason why that committee has been set up in the House category as an exclusive committee. A Member who belongs to it cannot have any other committee assignment, or any other congressional work to engage his attention. If he is a member of the Committee on Appropriations it is taken for granted his hands are full. Speaking in the vernacular, I have lived, eaten, drunk, and slept appropriations until it seems to me that I have been an appropriation hound since the memory of man runneth not to the contrary.

FROM "HOT DOGS" TO BILLIONS

Sometimes I have a quiet little personal laugh at myself when I recall the occasions when as a young and none-too-prosperous newspaper reporter I was often hard put to raise the price of a hot-dog sandwich and a plate of beans, while now on the Appropriations Committee of the greatest government on earth, I deal in multiplied millions and find

myself in the company of fiscal experts who speak of billions without turning a hair. It is possibly because I was brought up in the school of hard knocks that I stand cheek by jowl with the gentleman from Pennsylvania, Representative BOB RICH, in wondering where all the money is coming from to meet the colossal expenditures of the Government. The appropriations for the current fiscal year 1940 carried by the one bill of which I am sponsor—the Treasury and Post Office bill—exceed seventeen hundred million dollars, or $1,700,615,054, to be exact, which in itself is an indication of the growth of this mighty Nation, since no longer ago than 1917 all of the appropriations of the Government combined were $1,628,411,644.81, or $72,203,409.19 less than the amount carried in my bill for the fiscal year 1940 upon which we are now entered. Besides the bill I am called upon to sponsor, we now have nine regular supply bills and an indeterminate number of deficiency bills every year.

In expressing the concern I so sincerely feel over our mounting appropriations I do not mean to imply that a reasonable increase has not been justified. When Congress first passed the billion-dollar mark—a billion dollars of appropriations in two sessions—Speaker Thomas B. Reed, in defending the law-making body from the verbal castigation it received on every hand, declared with acerbity: "This is a billion-dollar country." Since then we have emerged further from the "horse and buggy" days and government has taken on many varied forms and a myriad of new activities. To be reasonable, therefore, we must admit that if government, as now highly organized and specialized, is to function and these activities, all authorized by Congress, are to continue, increased appropriations are necessary. Take, for instance, the appropriations for the Treasury and Post Office Departments, with which I am most familiar. The amount carried in the 1940 Treasury and Post Office bill, $1,700,615,054, is more than the entire appropriation of the Government for any year prior to 1918, when the cost of the World War began to be reflected in our appropriation bills, and at first blush a critic might say that we should have used the pruning knife more freely, but the answer is that the great bulk of the appropriations in this measure are for personal services which could not be reduced without seriously crippling the functions of the departments.

The Postal Service, for example, employs a vast army of clerks and carriers and railway mail workers. The mails must be moved, and we must provide the necessary personnel to do it, otherwise we would be subject to the severest censure. My subcommittee is economy minded to the *n*th degree. The members, besides myself, are EMMET O'NEAL, of Kentucky; GEORGE W. JOHNSON, of West Virginia; GEORGE H. MAHON, of Texas; JOHN TABER, of New York; and CLARENCE MCLEOD, of Michigan, all able men and believers in a wise economy.

MR. TABER A USEFUL MEMBER

The gentleman from New York [Mr. TABER], the ranking minority member of our subcommittee, also is the ranking member and bellwether of the Republicans on the full Committee on Appropriations. I want to pay him the tribute of saying that he is one of the most sincere, conscientious, and useful men I ever knew. He is a great plodder and digger and works with untiring diligence. He is never a partisan in the sense of being an obstructionist, but, on the contrary, he is a constructive force of great value to our committee and to the country, always doing his part to hold down appropriations to a basis of reason while at the same time meeting all the necessary requirements of the public service.

Of all the subcommittees, ours made the largest cut in Budget estimates for the 1940 appropriations. The Budget sent us proposed items of appropriations totaling $1,728,397,492. We had weeks of hearings, when departmental chiefs of high and low degree, from Secretary Morgenthau down, appeared before us to justify these estimates. Then we buckled our belts, sharpened our lead pencils, and settled down to the task of paring the estimates. We cut off some millions here, a few hundreds of thousands there, a few hundreds yonder, not spurning even the opportunity to clip off a lowly dollar here, there, and yonder, and when we concluded our labors and the bill passed we had cut $27,728,438 off of the estimates. This was the record of shearing estimates as far as the 10 regular supply bills of the 1940 series were concerned.

If America is to be saved from the ogre of debt it cannot be done by cutting appropriations of the regular departments of government. The governmental show must go on, metaphorically speaking, and the regular departments must continue to function if the people are to be served. There are plenty of opportunities to cut where cutting will not murder essential functions, and I propose to tell presently where I think the pruning knife can be inserted deeply and effectively in our swollen expenditures. I believe this can be done safely, and that when the swelling is removed Uncle Sam will be much relieved and improved.

A THIRTEEN-AND-A-HALF-BILLION COUNTRY

Let us take a look for a moment at the spending picture. I agree with Speaker Reed that ours is indeed a billion-dollar country, but I am loath to believe that it is a thirteen-and-a-half-billion-dollar country, measured in terms of annual appropriations, especially when our expenditures are running three and a half billion dollars in excess of our revenues, and there is no way under heaven on the basis of our present taxation to make tongue and buckle meet until the heavy spending subsides. The appropriations of the last regular session of Congress, including permanent annual appropriations and reappropriations, make up the amazing total of $13,480,216,000.39, the record of all peacetime appropriations in American history.

The Committee on Appropriations has authentic appropriation figures for every year since 1873, and we have an exact gage of how appropriations have been running year by year for 67 years. I know it will make the eyes of the big spenders bulge out when I quote figures taken from the records showing how spending has pyramided recently and if those who analyze these figures do not agree with the gentleman from Pennsylvania, BOB RICH, that we are headed straight for national bankruptcy, unless a halt is called I shall despair of the accuracy of their reasoning. In 1880 the population of the United States, as shown by the census taken that year, was 50,155,783. The unofficial estimate of the population in 1940 is 130,000,000. Population in the six decades has increased a little more than two and a half times. Now, let us take a look at the appropriation chart. In 1880 Congress appropriated $338,865,031.29 to run the Government. In 1940 the appropriations total $13,480,216,000.39. In other words, while population has increased two and a half times the appropriations are 40 times greater in 1940 than in 1880.

THIS WILL MAKE THE SPENDERS JUMP

And here is a comparison that will make the spenders jump: The total appropriations made by the United States Congress from 1890 to 1910, a period of 20 eventful, expanding years in the history of our great American commonwealth, amounted to $12,982,473,918.85.

The appropriations made at the single session of Congress that adjourned on August 5 last amounted to $13,480,216,000.39. By a little process of simple subtraction we find that Congress at the recent session spent $497,742,081.54 more than the total appropriations of the 20 years from 1890 to 1910. Lest there may be doubting Thomases who will question these facts I quote from the committee records the official figures of appropriations for the years mentioned:

1890	$395,430,284.26
1891	463,383,480.46
1892	524,381,815.60
1893	507,376,397.53
1894	519,535,293.31
1895	492,477,759.97
1896	496,982,585.01
1897	515,852,380.27
1898	528,735,878.33
1899	892,656,775.65
1900	698,912,982.83
1901	705,653,298.01
1902	730,241,862.51
1903	801,682,773.42
1904	752,741,659.25

1905	$781,288,214.95
1906	818,191,283.26
1907	881,953,644.09
1908	919,163,823.18
1909	1,006,431,726.96
Total	12,982,473,918.85

THIS WILL CURL THE HAIR

And here is a comparison that will curl the hair, metaphorically speaking: The total appropriations of the United States Government from 1873 to and including 1917, the year we entered the World War, were $27,946,170,839.85. The last regular session of Congress appropriated approximately half as much as was appropriated during the entire 44 years from 1873 to 1917.

The year 1890 was another census year. The total population as shown by the census that year was 62,947,714, almost half the population that is estimated in 1940. The total appropriations for 1890 were $395,430,284.26. The appropriations made at the recent regular session for the year 1940 were in amount 35 times greater than the appropriations for 1890. In 1900 when the next census was taken, the appropriations were $698,912,982.83 in a country of 75,994,575 population. With 50,000,000 more people, or less than 70 percent increase in 1940 compared with 1910, the appropriations for 1940 exceed the appropriations for 1910, 19 times. Skipping to 1930 when the official census showed America with a population of 122,775,046, only about 7,000,000 less than the official estimate of the 1940 population, the appropriations were only about one-third of the appropriations of the recent session, or in other words $4,665,236,768.04 against $13,480,216,000.39.

THREE TIMES CIVIL WAR EXPENDITURES IN ONE PEACE YEAR

The total expenditures of the United States Government for the 5-year Civil War period from the fiscal year 1862 to the fiscal year 1866, inclusive, were $4,173,189,827. This included the appropriations necessary to finance the greatest war in history up to that time. Yet for the year 1940 when the United States is at peace with the entire world, our expenditures of $13,480,216,000.39 are more than three times the expenditures of the Civil War period. Could any national treasury, even the treasury of the richest nation in the world, stand a continuation of such a strain?

In 1921 Congress enacted the law creating the Budget system, which made a revolutionary change in our appropriation procedure. Last year my subcommittee reported and Congress enacted legislation to strengthen the orderly arrangement of the budgetary processes and to implement the Bureau of the Budget more adequately with funds and personnel. Has the Budget system been a good thing? Let us see.

Before the Budget came into existence every legislative committee having to do with the functioning of the Government brought in its own appropriation bill. The legislative Committee on Agriculture prepared and sponsored the bill making appropriations for agriculture. The legislative Committee on Military Affairs prepared and brought in the bill making appropriations for the Army. The legislative Committee on Naval Affairs did the same for the Navy. The legislative Committee on the Post Office and Post Roads daddied the bill for the Post Office Department. The Budget Act separated legislative authority from the appropriating power and decreed that legislation and appropriations should be kept forever separate.

THE HOLMAN RULE

This has remained the rule ever since, with but one slight exception, that exception being the Holman rule. That grand old Indiana statesman, Judge William S. Holman, who was known far and wide as "the watchdog of the Treasury," made the eagle on every taxpayer's dollar scream before he let loose of it during his long membership on the Appropriations Committee, of which he was chairman during the Forty-fourth and Fifty-second Congresses. He accomplished one feat in particular that has made his name famous in appropriation history. How he ever managed to do it in the face of the truculent opposition of legislative committees that were fearful of being shorn of their appropriating powers no one knows, but he did induce Congress to incorporate in substantive and permanent law the principle that legislation should be in order on an appropriation bill if it can be shown definitely, and not by mere surmise or guesswork, that such legislation will reduce expenditures. That is the famous Holman rule. It has been invoked times without number, and it has withstood the parliamentary acid test. Under the aegis of that rule, as a subcommittee chairman I brought in legislation abolishing a lot of high-salaried jobs in the Customs Service which were nothing more nor less than political sinecures. Although my provision contravened existing law, the Speaker held it in order under the Holman rule. It is impossible to imagine how many millions of dollars have been saved to the taxpayers of America by the Holman rule. It will stand forever in our parliamentary system as a monument more enduring than granite or marble to the memory of a man who was a great statesman as well as a great economist.

Under the Budget system the appropriations that formerly were made through the legislative committees are now handled by subcommittees of the Appropriations Committee, of which there are 10. These subcommittees act on estimates submitted by the Budget Bureau, which in this function is the direct representative of the President.

THE IMPRIMATUR OF THE PRESIDENT

Every Budget estimate bears the imprimatur of the President. It comes to the Appropriations Committee with a personal letter of recommendation from him.

Let us take up from this point the operations of the appropriating system. During the fall and winter prior to the opening of the oncoming fiscal year the various appropriations subcommittees conduct hearings on the matters under their respective jurisdictions. These hearings last from 3 weeks to 2 months and take place in the various rooms of the three floors on the west side of the House wing of the Capitol which are the commodious permanent quarters of the Appropriations Committee. In these hearings members of a subcommittee seat themselves around one side and the ends of a long table and the witnesses with their secretaries and satellites and their impediment of books and records are grouped on the other side. The hearing generally starts with the testimony of the member of the Cabinet whose departmental appropriations are under consideration and the witnesses range from the Cabinet chief himself down to and including the heads of all of the bureaus and activities in his department.

We who sit on our side of the table have the privilege, or to express it in another way—pardon the paradox—we enjoy the duress, of listening to as fine a line of special pleading as ever fell on mortal ears. Every Government official comes before us with an inflated idea of the importance of his own bureau, which is quite understandable, for if an official is deeply interested in his work he wants to see it generously nurtured, fertilized, and watered by a sizable appropriation. The trouble is that every witness is governed by his needs and ambitions—largely the latter—as the head of an activity that is his own little world, and among the thousands upon thousands of Government witnesses I have cross-examined I do not recall one whose brow was furrowed with solicitude for the welfare of the American taxpayer. Day after day and week after week we hear only ex parte evidence, and though there are many excellent cross-examiners on our subcommittees we are handicapped by getting only one side of the story, except for such admissions as we are able literally to dig out of witnesses.

Many of the executive officials display charming finesse in the strategy with which they handle their cases. The old experts frequently build up their estimates in excess of their requirements, thinking the Appropriations Committee will trim them down so that in the end they will get about what they really expect anyway. Usually the actions of a subcommittee are approved by the full Committee on Appropriations and by the House and the bill goes to the Senate. Then begins a grand rush of bureau heads who hit the trail to the Senate Committee on Appropriations where high-pressure

methods and plaintive pleas often are effective in securing a raise in items passed by the House. The result is that the final rates frequently, if not usually, are written in conference where the rules permit a compromise between the amount fixed by the House and the amount fixed by the Senate. The conferees, however, cannot go below the House amount nor above the Senate figure in reaching their final determination.

DEFICIENCIES SUBCOMMITTEE A CATCH-ALL

After the 10 subcommittees have brought in the 10 regular appropriation bills and the House has acted on the same, the work of the deficiencies subcommittee is just beginning. The deficiencies subcommittee is a sort of catch-all, a postgraduate committee over and above the 10 subcommittees into which the Appropriations Committee is divided. Its function theoretically is to handle deficiency and emergency items which for some reason or other cannot be considered by regular subcommittees, usually because of the time element. Of late years, however, the deficiencies subcommittee has had a sort of potpourri of jurisdiction over enormous relief measures such as the W. P. A. and other bills of vast proportions not coming under any regular category. As previously indicated, Chairman TAYLOR, of the full Committee on Appropriations, is chairman of the deficiencies subcommittee, but on account of his advanced age he has turned over the active chairmanship to the gentleman from Virginia, Judge CLIFTON A. WOODRUM, while he has retained general directory authority. The other members of the deficiencies subcommittee in order of rank are CANNON of Missouri, myself, SNYDER, of Pennsylvania, O'NEAL, of Kentucky, JOHNSON of West Virginia, TABER, of New York, WIGGLESWORTH, of Massachusetts, LAMBERTSON, of Kansas, and DITTER, of Pennsylvania. The last four are Republicans, the others Democrats.

LIKE THE TEMPLE OF JANUS

It has been said that the doors of the deficiencies subcommittee, like the Temple of Janus, are never closed, and that is very nearly true. An estimate may come crashing in from the Budget Bureau at any time that will need immediate attention. If it is extra urgent in character, it will be put through Congress by resolution under unanimous consent; if not, it will be reserved for inclusion in one of the several deficiency bills that may be expected at every session of Congress.

The deficiency-appropriating system has led to monumental abuses. A practice has grown up whereby departmental officials, disappointed over failing to obtain their objectives before the regular subcommittees, will attempt to override the latter by getting their claims before the deficiencies subcommittee. The cleverness often displayed in devising arguments to give the deficiencies subcommittee a hook of jurisdiction over an item that should be presented to a regular subcommittee is a tribute to the inventive genius of the official mind, revealing an ingenuity not outshone by the inventor of the wooden nutmeg.

Formerly a deficiency appropriation bill, particularly one as far along in the session as a third deficiency, was supposed to take care of a few rag-tags and bobtails of appropriations, a mop-up bill carrying at most a few hundred thousand dollars, but not so in this era of big spending. The Budget Bureau, just before the last regular session of Congress adjourned, sent to our Appropriations Committee Budget estimates footing up the enormous total of $244,346,934.03 for inclusion in the third deficiency bill of that session of Congress. The amount thus proposed to be spent in what would ordinarily be called "a little old deficiency bill" was the equivalent of one-fourth of all the money it cost to run the entire Government back in 1909, when the economists of that day were horrified by what they regarded as the ultimate in spending profligacy—a "billion-dollar Congress." In the deficiencies subcommittee we trimmed a lot of the fat out of these swollen estimates and sent the third deficiency to the floor carrying only $53,000,000. When it got to the Senate, however, that body boosted it to the skies and we were obliged to agree on $185,168,066.38 in conference, so that it was not such a "little old deficiency bill" after all, but a pretty well stuffed legislative specimen when it emerged from the conference room.

GOOD OLD PATERNALISTIC UNCLE SAM

Among these third deficiency estimates that came to us with the O. K. of the administrative establishment on them were some which show rather graphically how far our Government is going in its tax-consuming paternalistic ventures. I shall take time to mention but two examples. Both of these come under the guise of our good-will activities in South America. It appears that in that sector, especially, good will and benevolence are leading us a long way—at the expense of the American taxpayer. We are building a pan-American highway, having already spent $2,000,000 on the project, without any assurance by treaty or otherwise that we could ever use it in case of emergency. If some foreign power, Germany, for instance, should violate the Monroe Doctrine, we could not come to the relief of South American countries by using the highway which our taxpayers' money has helped to build if Mexico or some country in Central America should say "no." It was testified that we have constructed bridges in those countries with our taxpayers' money, even before the stretches of highway are built which the bridges are to connect. We are sending our trained specialists to South American republics and paying them with our taxpayers' money to teach those peoples how to do many things which, presumably, they ought to know for their own good. In one of the estimates provision was made for sending civil-service experts from Washington to teach the natives of Brazil how to raise rubber. To me this seemed like sending coals to Newcastle; and when I asked the departmental witness, who was laboring hard to justify the estimate, what we could tell the Brazilians about raising rubber they did not already know, he replied: "They have no technicians down there." Technicians or no technicians, I insisted that we have no right to use the money wrung from our taxpayers at home to instruct the Brazilians how to raise one of the primary natural products of their own country. If I may be pardoned a pun, there is not enough rubber in my make-up to enable me to stretch my disposition far enough to approve that item. These things and many more equally fantastic we are doing, all in the name of good will. As one jokesmith remarked, it may not be long until our overflowing benevolence will take the form of sending experts to Mexico to teach the Mexicans how to make hot tamales. Then I know the world will be near the millenium.

Repeating my question, Is the Budget system a good thing? I answer unqualifiedly and unhesitatingly that it is. It has at least achieved its primary purpose of centralizing control of estimates and bringing them within the purview of an official whose vision is not limited to a single activity but takes in the Government as a whole. There is inherent in the budgetary system the power, if wisely exercised, of coordinating the regular expenditures of the Government and making them bear a reasonable relation to each other and to the whole. In these days of grandiose ideas of spending and of paternalism run rampant, God save America if we had to return to the old loose system whereby each legislative committee would sponsor its own appropriation bill!

HOW CAN APPROPRIATIONS BE REDUCED?

We come now to the question: "What can be done to reduce governmental expenditures?" Earlier in the discussion I promised some suggestions along this line, and I shall now give them, for whatever they may be worth. I sincerely believe that nothing is more important than that we shall hit the road to retrenchment and stay on that road until we reach the objective of a balanced budget. If the next President decides to lead the way toward the goal of economy, he will find an economy-minded Appropriations Committee ready to meet him more than half way and to cooperate with him to the last bend in the turnpike. Of the 40 members of the Appropriations Committee, 23, or more than half, voted against the spending-lending bill. Of the 47 Democrats in the House who voted "No" on the

spending-lending bill, 8, including the gentleman from Colorado, Chairman TAYLOR, were members of the Appropriations Committee. As now constituted, the Appropriations Committee is an economy-minded committee of conservative inclinations, and if the President chooses to lead, it stands ready to assist him in bringing the big spending program to a quick end. I make this statement flat-footedly and I will stick to it, but always with the reservation that the committee will do whatever may be necessary to relieve human distress. In this great land of ours, dedicated to Christian ideals, people must not be allowed to go hungry and naked.

I shall be unfortunate if in the foregoing description of the appropriating procedure I may have created the impression that the Appropriations Committee is responsible for permitting appropriations to be pyramided to dangerous heights. Wherever the fault rests it certainly is not with the Appropriations Committee.

The Committee on Appropriations, like every other standing committee of the House, is a creature of Congress, subject to congressional direction. If the House, whether pursuant to Executive recommendations or on its own initiative, passes bills authorizing the expenditure of vast sums of money the Appropriations Committee is helpless. It cannot go on a sit-down strike and refuse to make the appropriations that are specifically authorized. Heat, vigorously applied from above, would not permit that. It sometimes ignores authorizations unless the pressure becomes too hot and sometimes it appropriates only a part of the amounts that have been authorized, and gets away with it. But always the House, being the creator of the Appropriations Committee, has the whip hand and it can force the committee to live up to the authorizations.

AUTHORIZATIONS THE BETE NOIR OF ECONOMISTS

Authorization bills are the bete noir of the economist. Those bills are eternally knocking the economy program into a cocked hat. In these days when the United States Treasury is as bare as Mother Hubbard's cupboard the language of an authorization bill is a laugh. It reads:

> There is hereby authorized to be appropriated, out of any money in the Treasury not otherwise appropriated.

And so forth. Is there anyone in America with imagination elastic enough to lead him to believe that there is as much as a "thin dime" in the United States Treasury that is not "otherwise appropriated"?

And right here let me reiterate that the President is not alone responsible for all of our astronomical appropriations. Congress must bear its share of the blame, and the vehicle through which Congress usually acts when it wishes to put a drain into the Treasury is the authorization bill.

This brings me to the "blank check." One of my first and foremost recommendations is that Congress shall eschew henceforth and forevermore the blank-check appropriation. Every dollar appropriated by Congress should pass the keen scrutiny of the Appropriations Committee and be justified by competent evidence. In the last few years vast sums have been appropriated en bloc to administrative officials in the form of so-called blank checks, and as a result we have witnessed, time after time, the allocation of funds through administrative allotments for purposes which the Appropriations Committee had previously flatly rejected. This is subversive of our theory of government. Under our constitutional system appropriation measures must originate in the House, and the House should assume full responsibility.

MY THREE RECOMMENDATIONS

Summarizing, I recommend:

First. No blank checks.

Second. No further appropriations except for the most essential purposes until the Budget can be balanced.

Third. The creation of a committee on fiscal planning to facilitate the balancing of the Budget and to keep it balanced.

When I say that for the time being, at least until we can get the Government a little way out of the hole, we should suspend appropriations for nonessentials, I am giving what I believe to be one of the most salutary bits of advice I have to offer. When I speak of nonessentials, I refer to such improvements as reclamation projects, roads, river and harbor construction, public buildings, and a large variety of other similar projects and improvements which, however desirable in flush times, can wait, now that our Government is on the edge of bankruptcy. On the one hand we have been spending enormous sums on reclamation projects to bring more land into productivity, while on the other hand we have been killing little pigs and converting them into soap grease and plowing under every third row of cotton. How can we reconcile such inconsistencies?

And roads: Although the country is now beribboned from the Atlantic to the Pacific and from the Great Lakes to the Gulf with hard-surfaced highways, there are those who would empty the mythical contents of an empty Treasury and place a bondage of debt on our great-grandchildren to build still more roads, forgetting that the cement dealers and equipment men get a large percentage of every dollar spent for road building.

PRODIGIOUS SUM SPENT ON ROADS

From 1933 up to and including the fiscal year 1940 our Federal appropriations for roads amounted to the prodigious total of $2,884,700,000. This includes both regular and emergency road funds. Of this amount, $1,893,700,000 has been disbursed through the Public Roads Administration of the Department of Agriculture and $991,000,000 through the three emergency agencies—W. P. A., C. W. A., and F. E. R. A. I wonder how many of our citizens can realize the magnitude of this outlay of the taxpayers' money on road building during the last 7 years. Perhaps it can be fairly well understood from the fact that it amounts to more than $4,000 for every day since the beginning of the Christian era. In the interest of the retrenchment so vitally needed to reassure business and to bring about recovery, public-building construction can well wait a while, as can improvement work on rivers and harbors.

There is nothing essential about reclamation projects, public roads, river and harbor works, and public buildings. The wise course is to put these and other nonessentials over without prejudice until better times. We have constructed public buildings all over the United States during the last 6 years, but on top of these lavish expenditures we now find a demand for a new building program so that every Member of Congress may have another new building in his district. In the name of common sense, I do not know why every Member of Congress should get a new post-office building any more than a lighthouse or a Federal penitentiary. The needs of the public service and not the wants of suffering Congressmen should be the sole guide in establishing these buildings, and there are congressional districts, plenty of them, where it is cheaper, more sensible, and just as satisfactory to the public to rent post-office quarters as it would be to invest a relatively large amount of Federal funds in a building not justified by the widest stretch of the imagination.

COMMITTEE ON FISCAL PLANNING

I invite the attention of the House to House Joint Resolution 422, which I introduced on January 15 last, providing for the creation of a committee on fiscal planning, the text of which is as follows:

> Joint resolution to create a Committee on Fiscal Planning
>
> *Resolved, etc.*, That there is hereby created a Committee on Fiscal Planning to be composed of the chairman, ranking majority member, and ranking minority member of the House Committee on Appropriations, the chairman, ranking majority member, and ranking minority member of the Ways and Means Committee, and the Director of the Budget.
>
> SEC. 2. The Committee on Fiscal Planning is directed to make a study of United States Government finances with a view to coordinating revenue and spending activities, reducing appropriations wherever it is feasible to do so, and ultimately eliminating the gap between Federal revenues and Federal expenditures.

The new committee on fiscal planning, or, in short, the planning committee, which I now propose, would establish a mechanism which would enable the Government to do for itself what every prudent businessman does in his own business. The businessman, if he is wise and forelooking, avoids going into debt by first making a survey of prospective

revenues and then cutting his cloth accordingly, so as not to exceed his income. The planning committee I suggest would have seven members—the chairman, ranking majority member, and ranking minority member of the House Committee on Appropriations; the chairman, ranking majority member, and ranking minority member of the Ways and Means Committee; and the Director of the Budget. The Ways and Means Committee raises the revenues to support the Government, the Appropriations Committee appropriates the revenues, and the Director of the Budget coordinates the spending agencies. If these seven officials would get their heads together they might accomplish much for the cause of economy by planning a campaign to make the revenues cover the appropriations annually and thus wipe out the deficit—a consummation devoutly to be wished. It is a plan worth trying. There is now no cooperation whatever between the revenue-raising and appropriating agencies. While such a planning committee would not be proof against the big spenders it would be, I believe, a constant force operating in favor of a balanced Budget and a measured economy, especially if its plans are given widespread publicity so as to attract the support of a wholesome public opinion. A report from such a committee that a particular Treasury-looting bill would be against the program of the planning committee and contrary to the public interest might have a deterrent effect, even in these days of congressional log-rolling and puissant hog combines.

But, in conclusion, I confess that while I may be good at proposing remedies for the big spending epidemic I am not so sure of the efficacy of my own prescriptions. Astronomical spending has acquired such a momentum in this country that the real question is, Can it be stopped?

Of one thing I am satisfied in my own mind, and that is that we will never have an adequate recovery from the spending saturnalia until the people of the United States get aroused and take the situation in their own hands and do a little high pressuring on their own hook on Members of Congress by making them understand that future political rewards will be bestowed for the money they keep in the United States Treasury, rather than for the money they siphon out of it. I am not convinced that this reversal of the public's attitude is possible nor yet am I convinced that it is impossible; for that matter, when I reflect that the people, when sufficiently stirred, sometimes change their minds in a mighty big hurry. The only debatable point with me is whether they can change their minds quickly enough to save the Nation from a debacle. Meanwhile, I shall be cudgeling my brains trying to decide in my own mind whether my friend BOB RICH is right when he says we are headed for the demnition bow-wows. I wonder. [Applause.]

The National Defense

EXTENSION OF REMARKS
OF
HON. JAMES SECCOMBE
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, June 3, 1940

LETTER FROM AND ARTICLE BY H. F. FREASE

Mr. SECCOMBE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

IMMEDIATELY AVAILABLE NATIONAL DEFENSES

CANTON, OHIO, *May 25, 1940.*

Hon. JAMES SECCOMBE,
United States House of Representatives, Washington, D. C.

DEAR JIM: Just as neither Democrats nor Republicans are entirely blameless for the now publicly admitted deficiencies in our national defenses, so neither party should have the sole monopoly of suggesting and originating corrective measures.

First of all, the people, resources, ways of life, and institutions of the United States are not now, and never have been, like those of any country in Europe. Every person in the United States is here because he or his ancestor got fed up on the institutions, ways of life, and resources of some foreign country, and most of us stem from European countries.

We have immediately available in the United States under our present Federal and State constitutions, implementable by suitable detail Federal and State legislation, a reserve defense force greater than any in the world.

In the invaded countries of Europe there are a few paltry thousands of privately owned motorcars. In the United States there are over 30,000,000 registered motorcars.

Defense against "fifth column" and parachute-troop surprise attacks calls for a return to the methods of Indian fighting used in the pioneer days of our country, when every man and many a woman had a rifle and when the only defense against redskin surprise attacks from the forest was to see the redskins coming and to shoot them as they came. There was no time to call out the Army. Every man had to be first and finally for himself.

Europeans generally are unfamiliar with this kind of fighting, else 1,500 Germans would not have lasted unsupported in Oslo for 3 days.

In our country today we do not know accurately how many more citizen-owned small arms, such as hunting rifles and shotguns, there are than there were in the pioneer days, but we do know we have over 30,000,000 registered motor cars.

Every one of these 30,000,000 registered motor cars has a driver, and it is practically a sure thing that at least 1,000,000 of these drivers have rifles or shotguns.

If war broke out in the old-fashioned way after an ultimatum and a declaration, part or all of these 30,000,000 cars and their drivers would be commandeered and drafted by the relatively slow methods of Army organization.

Against surprise "fifth column" and parachute troop attacks, that would be too late.

For a starter, we should enroll a motor reserve corps of at least 1,000,000 car owners each of whom has one or more rifles or shotguns, whose registration cards should be assembled by voting districts, townships, or counties, and who would on call by radio or telephone or general alarm drive in their cars and be on the spot to shoot "fifth column" or parachute troop attackers at every and any place in these United States where such attackers would appear.

In using the word "reserve" in the proposed name "Motor Reserve Corps" for the organization as a defense force of men and materials we already have, modern Army usage is followed. To tie this in with the Federal and Ohio State Constitutions for example, substitute for the word "reserve" the word "militia."

Both the President of the United States and the Governors of the several States have long unused constitutional powers with respect to militia, which can be the foundation of a motor reserve corps organization.

Moderately speaking, then, the United States can have very soon a motor reserve corps of a million men, a million cars, and a million rifles.

If we went to the boastful extremes of certain other countries, we could truthfully say we now have in existence a motor reserve of 30,000,000 cars, since all are fundamentally available to our defense forces.

It is not now necessary to go to this extreme, but we should perfect the moderate organization.

Knowing the prompt and able attention you always give to matters of importance to your city, your State, and your country, I am thanking you in advance for your earnest consideration of the possibilities of organizing our immediately available national defenses on the above or other lines which may seem to you to be more effective.

Yours very sincerely,

H. F. FREASE.

ARMAMENT BOTTLENECK NO. 1

(By H. F. Frease)

Armament bottleneck No. 1 in the United States defense program of 1940 is dies, fixtures, gages, tools, and similar special equipment. The New Deal administration knows this, and is talking about setting up C. C. C. industrial-training camps for training mechanics and turning out the missing fundamental equipment for mass production of all kinds and classes of armament.

As in many other instances, the New Deal has apparently overlooked the provisions of existing law. Congress as long ago as June 3, 1916, provided that this special production equipment could be obtained by the Secretary of War for use by the Government and private manufacturers.

Just why this has not already been done, for example out of the billions of W. P. A. funds expended in the last 7 years, is useless now to question very much. Perhaps the Army Ordnance Department, numbering 420 officers and 4,500 men, authorized as of April 3, 1939, could not make itself heard loud enough.

The idea of C. C. C. industrial-training camps being utilized for this purpose might have some merit for turning out this production equipment in 1943, but has little immediate value because dies, fixtures, gages, and tools require machine tools for their manufacture, and the C. C. C. camps do not have any.

From the standpoint of training die and tool makers, if it is proposed to delay armament for defense until all-purpose die and tool makers can be trained, then we are faced with a delay of years, not months.

The necessities, however, do not require all-purpose die and tool makers, but rather single-purpose die and tool makers who can be quickly trained in shops already existing.

Aside from technical high schools, there is a machine shop in every first-class school of mechanical engineering in the country, and every student passing through the usual course in machine-shop practice makes something in the nature of a die, fixture, gage, or tool.

The unusual possibilities of utilizing such facilities for preparing the fundamental production equipment necessary for armaments has been amply demonstrated in the classes of Lt. Col. E. L. Lucas, O. R. C., at Mississippi State College, Starkville, Miss., where the project for 1 year was to make all the necessary special equipment for the Garand rifle, and where the project for this year is to make weld assembled shell turning lathes out of standard rolled or drawn steel sections.

Mechanical engineering students are regularly being taught to and do make and duplicate single parts. They are not expected to become all-purpose die and tool makers.

What is now needed is to duplicate existing parts whose design and specification has been laid down.

A carefully organized program for this purpose can immediately be carried out in the mechanical engineering shops of our technical schools.

Does not common sense dictate the use of these existing men, machinery, and materials?

Address to Graduating Class of Sevier County High School, Sevierville, Tenn.

EXTENSION OF REMARKS

OF

HON. B. CARROLL REECE

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 4, 1940

ADDRESS BY HON. B. CARROLL REECE, OF TENNESSEE

Mr. REECE of Tennessee. Mr. Speaker, under leave to extend my remarks, I include a copy of the address I delivered to the graduating class of Sevier County High School, at Sevierville, Tenn., May 10, 1940:

There are some ideas and opinions, along with knowledge and concept born of knowledge, which come only with time and experience, and which, by reason of that fact, you young ladies and gentlemen would not and could not be expected to know about yet.

One of the advantages of age and experience is a pleasure we older persons have in greeting a graduating class of young people such as you; of looking into your bright, eager faces, and of helping, by advice—and, may I say, speeches—to start you along the right road toward the careers in which you hope to achieve the ideals of your dreams.

Now, because I myself was once a high-school graduate, as you are, and because I recall very vividly my school experiences, I am going to get right down on a basis of real, confidential counsel and understanding with you tonight. Now this is just between us; your teachers and all of these other visitors can't share in this. It's just a matter between you graduates and myself. When I had finished school I had come to the conclusion that most of the speeches which were intended as good advice, and brilliant examples of rhetoric, were just dull, stodgy, dry-as-dust talks given by folks who liked to make speeches, and who could compel us young students to listen to them. Now, I know that probably is the way you feel about the speeches you have had to listen to all through your school days—maybe including the one you are listening to now. And—remember this is between us, and I wouldn't want it repeated to your teachers—a lot of the speeches boys and girls in school have to listen to are pretty stodgy and dry.

There is a perfectly legitimate reason for that, and it is not the impatience of youth, although youth is impatient. It is because youth has not had experiences; youth has not had to fight for its ideals; youth has not had the disillusionments that come; the world, to the eyes of youth, is still a world of tinsel and glitter; and dull care, responsibility, hard work—all are somewhere off in the future, and are not to be worried about when youth wants to frolic.

Football, baseball, basketball, tennis—thrilling contests, cheers, songs, excursions, dances—those are the world of youth.

I for one would not take from youth one bit of the impatience which is its chief characteristic. The vibrant energies, the bounding health, the beautiful dreams, the wonderful visions, the animal spirits, all of those go to make youth beautiful and wonderful and blessed. I understand, of course—now that we are being confidential with one another—I understand that impatience of youth which says, "Why hold us here to make speeches at us? Why not turn us loose to get at this job of running the world, because we can do a better job of it than you have?" And maybe you can do a better job of running the world than we have. I pray that you can.

Now, while it is true, perhaps, that it taxes your patience to listen to a lot of dry speeches, and a lot of good advice rather somberly given by your elders, don't forget this fact, my young friends: Your elders make these speeches, they offer the advice to you, because they have trodden the path that you young folks are today just setting your feet upon; these oldsters know the disappointments and the disillusionments that will come; they know the ideals that will go toppling, one by one, along life's pathway; they know the hardships and the privations that will thrust themselves into the rosy dream of youth and shatter the golden visions; and it is out of hearts filled with a warm, pulsing affection for you; it is from the depths of souls that love you boys and girls; it is from an affection that would save you if possible from the hurts of these disillusionments, and these broken ideals, and these shattered dreams, that we oldsters talk to you as we do. It is in the hope that in some way we can so prepare you that your fine, warm, generous sensibilities will not be too deeply wounded by the disappointments, and the hardships, and the cares, and the sorrows which have wounded us. It is because of a deep, keen sympathy for your youth—a youth that, with the years, has vanished for us—we seek to advise you in the hope of saving you from some of the hurts of the world. Of course, it is all futile. It never has been done. It never will be done.. Youth is youth, and life is life for each individual; you will learn, as we have learned, only by experiences; some beautiful; some harsh and unlovely; some pleasant; some that hurt deeply.

So, then, my young friends, I am not going to try today to prepare you for the hurts that the world holds in store; for the disappointments that you will meet; for the defeats you will suffer; for the ideals you will lose! for the dreams which will be shattered.

I am going to ask you to do one thing to justify the love and the care of your fathers and mothers, and the expenses paid by the taxpayers to educate you and prepare you for life; I am going to make one request of you, as a repayment, in some degree, of the great blessings you have inherited from your forefathers in this wonderful, free constitutional republic—this great beautiful, marvelous country of ours where individual freedom is still your most priceless possession. My request is this: I want you boys and girls, each and every one of you, to meet life unafraid; have that courage your fathers and mothers, and your grandfathers and grandmothers before you had; that courage which enabled them to take an ax and a squirrel rifle, go into the primeval forests, and by their own courage, thrift, energy, initiative, vision, and capacity for hard work, to carve out homes for themselves, and to carve out for you of today this great and beautiful Nation of ours—the finest, most wonderful country in which to live that has ever existed on the face of the globe.

Meet life unafraid. With chins up and chests out, with eyes to the front, take the blows the world will give you, and don't flinch. Fight back. Stand up for your rights. Determine that which is true and just and honest and honorable, and never quit fighting for it, no matter what the world seeks to do to you. Can you whip the world, you young folks? Can you bring the world into submission at your feet, to take from it all of those things to which you are rightfully entitled? Of course you can. Your fathers, and your mothers, and your grandfathers, and your grandmothers, your ancestors from the time the Declaration of Independence was signed, by courage, by faith in a living God, and by self-reliance took a world of trackless forests and unwatered plains and transformed it into this marvelous civilization we have here in America, with its unparalleled network of fine highways; its magnificent educational institutions, of which yours is one; its vast network of railroads; its fertile acres, and its wonderful cities—all of these, remember, your forefathers through self-reliance, a capacity for hard work, and an unshakable faith in God wrought from the primeval forests and the waterless plains of this continent.

There are certain facts which will impress themselves more and more upon you as you grow older, as your experience and contact with the world are broadened. One of those facts is that all of these material possessions built up by your forefathers, all of the luxuries which we enjoy today, all of the labor-saving devices, the modern means of transportation, communication, and information, all of the modern theaters, the stores, the scientifically air-conditioned offices and homes, the bright lights—all of these material things which tend to thrill us and to make life easier, also tend to soften us and to sap that ruggedness of character, that dauntless courage, that capacity for hard work, thrift, and self-denial which our forefathers and mothers possessed in such great measure. You must guard against that danger.

Another fact that will impress itself upon you is that all of these material possessions are as dross when compared to the remarkable—I should say marvelous—cultural and spiritual possessions which are being passed on to you as a heritage by your forefathers.

Just stop for a moment to think that in Europe young men and women of your age do not have the education you possess today. You are better educated, more intelligent, more adequately trained thinkers as you stand today than are most of the adults of Europe or the Orient. The boys and girls of Europe and the Orient not only have none of the luxuries you possess, they also lack many of the necessities which you accept as a matter of course. But I am referring more specifically at the moment to those great spiritual and cultural possessions as set forth in the great organic law of our Nation, the Constitution. I refer to what is collectively called the Bill of Rights. The Bill of Rights is a safeguard of the personal liberties of each one of you. It is what guarantees your right to move about as you please; to be secure in your own homes

from search and seizure; to have religious and political freedom; to have the liberty of expressing yourselves in speech or in writing; the right to a press that is still free to give you the facts about the Government and about the world; the right to pursue life, liberty, and happiness in your own way, according to your varying talents and inclinations, so long as you do not interfere improperly or unfairly with your fellow men. You will come, as the years go on, to prize these great spiritual and cultural heritages far above any material possessions which may be handed on to you by your forbears.

There is another fact you will learn as life opens up and broadens out for you, as you get out into the world. That fact is that these possessions, these rights and liberties and privileges which were established for you by your forefathers, who were willing to fight, and bleed, and die, to attain them, are not possessions which are fixed, irrevocable, always to be yours without any effort on your part to protect or maintain them. Quite to the contrary, the sooner you learn that you must constantly be alert to protect and retain these rights and liberties and privileges, the better off you will be. There are always among us those who, to satisfy their unreasoning urge to "boss" you and everybody else, are perfectly willing to steal these rights and liberties and privileges from you and to enslave you under some form of political autocracy. You always must guard against the danger of such people coming into power, or remaining in power, where they can threaten these priceless possessions.

Another fact that you will learn as you get out in the world is that there are always plenty of men and women who are willing to promise you ease, security, leisure, if you will put them in power over your government and your affairs. After they have made these glowing promises, and after they have gotten into office, and into positions of power and control over the government, these demagogs invariably and without fail begin to squander your money—the funds of the taxpayers. They are no sooner entrenched in office than they begin, at your expense, with your money, to surround themselves with their friends and henchmen who will do their bidding. They begin—these political demagogs—to pass out, at your expense, favors to certain classes or sections in order further to entrench themselves in power over you. After a few years of that sort of thing the taxpayers find their public debt has grown to ruinous proportions. They find their government officials are spending more than the revenues amount to, with the result that taxes have to be increased year after year to meet increasing deficits. This in turn means the people continue to be more and more oppressed by the tax-gatherers; an ever-increasing proportion of what they earn, or save, must be handed over to the political squanderers and plunderers and corruptionists, until finally the people rebel and, in some cases, even turn from the very principles of their government because they are so outraged and disgusted by the conduct of their public officials.

You are all fresh in your study of history; so you can readily recall that the taxgatherer has been the bane of every people in every period of which we have a recorded history. The rulers up at the top, represented by a veritable host of petty tyrants and dictators, have always lived on the very cream—the very fat of the land—while the masses, including young folks like yourselves, had to sweat and suffer, work and starve, so these selfish, bloated, corrupt political plutocrats, entrenched in positions of power and influence, might have their Lucullan feasts in their palatial palaces.

It was because they were outraged by these things, and because they made up their minds that they would not any longer yield up their rights and liberties to tyrants, that our forbears tore up their lives, root and branch, from the countries of their nativity, and sailed across uncharted seas to face the hardships of this unknown and undeveloped land.

Never forget, my young friends, that every privilege, every liberty, every right that you possess today in the United States of America was purchased for you by the suffering and the blood of your ancestors. Never forget that all of these rich material possessions which have come to you as your heritage, and over which you must soon begin to exercise control, were accumulated for you in the sweat and suffering, in the labor and the privation, in the courage and the thrift of your forbears.

Oh, I know; I know youth is impatient about these matters. It seems not worth your while now to think about these solemn facts because life stretches out before you; the future is an unexplored fairyland which your dreams have peopled with lovely beings. That is what I meant a while ago when I said that no one can prepare you by speeches or advice for the disappointments and the hardships which the world is going to thrust into your dreams to shatter some of your golden vision. As time goes on, you will come to prize more highly all of these spiritual and cultural and material possessions through an appreciation of how they were acquired for you; then you will awaken to the necessity of your doing something about the responsibility that rests upon you to protect and defend those spiritual and cultural and material possessions—to see that they are not filched from you by wily demagogs and politicians and propagandists preaching alien "isms." After all, you cannot too soon learn that you must guard these possessions or they will be filched from you. You cannot learn too soon that it is your duty not only to guard free government, personal liberty, all of these spiritual and cultural and material possessions which have come to you, in order to pass them on unimpaired to generations which are to follow you. The sooner you learn that all of these priceless possessions must be lived and used and then passed on, the better it will be for you and those who are to come after you.

You have heard the old adage, "We never miss the water till the well runs dry." There is a great philosophical truth hidden in that old saying. Those of us who have been born and have lived in these later years have never known what it is to be without the liberties, the rights, and the privileges we exercise. Naturally enough, never having been without these liberties and rights and privileges, never having had any of them denied us, it is difficult for us to imagine what it would be like not to possess them and exercise them in our everyday life.

You can get some inkling, however, of how precious these liberties and rights and privileges are when you stop to compare your own situation with that of young people of similar age in other parts of the world. How queer it would seem to you young ladies and gentlemen to have to go down to a gruff police officer and get a permit before you could have the simplest, most innocent sort of a dance; or to have to get a special permit, after harsh and searching cross-questioning, in order to organize a class society and hold meetings; or to have to get a government permit for a football game, or a baseball game, or a basketball game, or any athletic event; and yet that is exactly what the young people of Europe and the Orient today must do. They do not exercise the right of peaceable assembly as do you. For them to assemble peacefully for any purpose, social or otherwise, it is first necessary to go in the most humble spirit, in the meekest sort of way, to some petty local governmental bureaucrat and plead for a permit.

I thank God today that you young folks have never known, and I pray God today that you never will know, the horrors of hearing a loud knock on the door of your home in the dead of night, the shuffling of men's feet, the gruff voices ordering your parents to open the door, the grim seizure of your father or your brothers by uniformed men, the curt refusal of those men to answer the tearful questions as to the reason for such a terrible visitation, the taking away in custody of your father or your brothers—and from them only the most terrible surmises and the vaguest sort of rumors of internment camps, lashings, hard labor, starvation, and eventually death or broken minds and bodies; and yet these are the common experiences today of young people in Russia, Germany, Italy, and China. All over the world, except in the United States of America, boys and girls are having to go through these dreadful experiences.

It would be utterly impossible for you—here in free, secure, luxurious America—even to imagine what the boys and girls in other countries would be willing to give, what they would be willing to do, how highly they would prize and cherish the liberties, the rights, the privileges, and the luxuries which you young folks take as a matter of course.

It is a rather startling thing when we stop to realize that it has been only 149 years since the Bill of Rights became a part of the organic law of this Nation. That is not a very long time for such liberties, rights, and privileges as we have in this Nation to take root in tradition and to become fixed and secure.

Already we have seen carefully calculated and dangerous attempts to take away more and more of our freedom; more and more of our rights and privileges; more and more of the sovereignty of the States; more and more of the rights of decision of conducting our lives as we choose.

So let me entreat you to guard well these liberties and privileges and rights which are yours. Let no silver-tongued demagogs persuade you to trade off your liberty for a little fancied temporary security.

I am reminded at this point of one of Aesop's fables, which you will recall.

You will remember that in this fable a lean and hungry wolf in his lonely foraging meets a dog who has slipped his leash and strayed from home.

"You are fat and healthy," said the wolf, "while I am starving."

"Yes," replied the dog; "I was fed on fine, rich food; it is brought to me, so I do not have to forage. In return, all I have to do is to stand guard over my master's house."

"I should very much like," said the wolf, "to have a job like that and have lots of delicious food and a warm place to sleep."

"I believe," the dog said, "I can arrange such a job for you."

The dog started to lead the way toward his master's house. But on the way the wolf noticed that the hair around the dog's neck was rubbed off. He asked the reason.

"Because," the dog explained, "I must wear a collar and stay chained all day."

The wolf stopped, hesitated a moment, turned and trotted back toward the woods and his unprofitable foraging—to starvation if need be.

The moral which Aesop meant to bring out in that fable was that it is better to starve in freedom than to be fat in slavery.

You have heard a good deal of talk in the last 5 years that America has no more frontiers; that opportunities for young people are exhausted; that all of the professions are overcrowded; that industry cannot employ all the workers; that millions of American men and women and their dependents must rely on the Federal Government at Washington for a mean and meager existence.

None of these statements is true. For young men and young women who have the faith in God and in themselves, who have the self-reliance, the energy, the vision, the initiative, and the willingness to work hard, opportunities loom just as great today as ever they have for any young people in this country at any time. You know as well as I that in modern science in every direction—in chemistry and engineering—opportunities lie waiting to be appropriated by those with the energy and the vision to improve them.

One of the most successful young men in this country, of whom I read recently, came out of college at the beginning of this great depression, at a time when it appeared that all opportunities were gone and that civilization itself was about to crash. He looked about him and saw that young people everywhere were vainly seeking jobs, positions, something to do. He tried it for a while and soon saw that he was wasting both his energy and his money.

That young man had every reason in the world to sit down and grumble about the mess his forefathers had made of the country and of its rich resources. He had every right, according to some of these modern propagandists, to turn to the Government and expect a job under some petty bureaucratic tyrant for a meager stipend with which he could lead a miserable existence. I say he had every right, according to some of the modern preachments you young folks are hearing, to adopt that course. But did he? Ah, no. What do you think he did? He sat down and studied out the situation and said to himself, "If I can't find a job in industry, I will make my own job." He did just that—by opening an office and rendering a service of finding jobs for other young folks. He was so successful that he not only has a very fine business now—a new business; what you might call a depression profession—but he has been the benefactor of hundreds of other young people. Opportunities all gone? Why, to the boy or the girl of vision and imagination the world is filled with opportunities.

There have always been failures among us. There always will be failures among us, because there are always a certain percent of the people who do not possess, for some reason or other, the initiative and the vision, the courage, and the ability to hustle and get along.

There was a speech made on Lincoln's Birthday last February by the Honorable BRUCE BARTON, a Representative from New York, that I should like to see put into the hands of every schoolboy and schoolgirl in the United States of America. I want you to regard carefully the statements made by this great New York Representative concerning the immortal Lincoln. It was in part somewhat as follows:

"We are met here to honor the memory of an American who was ill-fed, ill-clothed, ill-housed—and did not know it.

"He was born in a log cabin without heat, running water, or any modern convenience. According to a philosophy now widely current, this was a hopeless environment; it should have convinced him from the start that he was doomed to failure.

"His clothes were of crude homespun, ill-fitting, and worn until the fabric would no longer hold a patch.

"His diet of corn pone and bacon lacked essential vitamins.

"His schooling was limited to a few scattered weeks under teachers whose own schooling had been meager.

"In such circumstances he should have been told there was no hope. But no one told him this. Instead he was told he was fortunate because he had been born in a country where any boy might properly aspire to even the highest success, even the Presidency of the United States.

"He was told, also, that self-discipline and hard work were his only path to salvation, and that if he neglected them he would be poor and wretched all his life.

"It was generally accepted in those days that the privilege of self-government involved the responsibility of self-support.

"He had every excuse for discouragement, self-pity, and revolt. He should have been good material for the Communist Party; an excellent professional delegate to the congresses of American youth.

"But no one let him know the cards were stacked against him. No one suggested that it was useless to try. No one told him all the chances were gone.

"Everything government can properly do to adjust the handicaps in the game of life has the cordial approval of all right-thinking men and women. You and I would have no child born in a log cabin; no American, young or old, ill-fed, ill-clothed, or deprived of opportunity for self-respecting employment and a chance to contribute, up to the limit of his talents, to the progress of the community.

"I seek to remind you of the ancient truth that the life is more than meat and the body more than raiment. We need this reminder. All our talk for too long has been of our stomachs and our pocketbooks. We have chattered on and on about the standard of living, when it is only the standard of our inner living—the ambition, hope self-reliance, sacrifice, faith—that makes life worth living at all. Our eyes are blurred with covetousness, jealousy, and avarice; and we have almost forgotten that where there is no vision the people perish as surely as where there is no food."

There has never been a time in the United States of America, nor in the world, where young men and young women of vision were more sadly needed than today. The world requires saving, and it is both your privilege and your duty to help save it. Your own Nation needs to be protected and your own free government needs to be preserved, and it is both your privilege and your duty to protect and preserve your country and your government.

When you get out into the world, you will, if you have not already done so, meet some very persuasive talkers, both young and old, both men and women, who will try to argue and persuade you into discontentment with our constitutional form of government—into a discontentment with the way things are done in America—and they will try to persuade you to overthrow, by your votes, the "old fogies" who want to continue to operate America as America, for America.

When you meet these propagandists and proselyters, whether they be Communists, or Nazis, or Fascists, or Japanese, look them in the eye and ask them how much liberty, how much freedom exist in Russia under communism, in Germany under nazi-ism, in Italy under fascism, in Japan under monarchy. Look them in the eye and tell them that you already know that the churches have been burned; that the lodges have been broken up; that the labor unions have been dissolved; that the finest books and music, and the finest paintings and statuary in the world have been destroyed by the hands of vandals, who had neither the culture nor the decency to appreciate art; that the schools have been disrupted; that intelligence has been persecuted and penalized, and brute strength enthroned as the god of the people. Tell them you know that up at the top in Russia, in Germany, in Italy, in Japan, are a few men mad with lust for power, supported by hundreds of paid minions, all living off the masses of the people, calling themselves "the state," and preaching to the young people that they owe their lives, their love, their pleasures, their welfare, their very souls to the state. Tell those proselyters you already know "the state" is nothing more nor less, in every case and in every country, than a few men at the top, preying like vultures upon the spiritual, the cultural, and the material possessions of the people, destroying and befouling more than they can consume. If these propagandists and proselyters deny that that is the truth, tell them in their teeth that they are liars and don't be afraid to look them in the eye when you say it, because they will be liars.

Now a concluding word. I do not want to bring into this wonderful occasion today a harsh or saddening note. Therefore, I have deliberately avoided talking about war. I simply want to say one sentence: That war and all that war represents is hostile to everything you and I consider fine and decent; it is not only hostile toward man, it is hostile toward God. I shall pursue the subject no further than to say to you that so long as I have the honor to be a Member of the United States Congress I will oppose the United States ever again sending men or money into any foreign conflicts.

If any nation or any combination of nations should ever attempt to invade this country or to set up within the zone of the Monroe Doctrine bases from which they could make war upon this country, then I would say fight—fight to the last man, woman, and child, if necessary, to sweep such invaders away from our shores. But I shall never consent, for my part, to vote to put the United States of America, her men or women or her money into the age-old quarrels of Europe.

Now, as a last word, let me again urge you to face life unafraid. The only thing you really have to fear in life is fear. The only thing that can overcome you is fear. The only thing that can defeat you is fear.

Go forward from here today into other and higher educational institutions or into business or whatever activities you have planned; not only keep alive your faith in God, but never be ashamed to say so; not only pray constantly, but never be afraid to say you are a praying boy or a praying girl; you have the stuff in you; your lives are before you; your opportunities are myriad; you can aspire to the highest place in your land in any profession, in any line of work or endeavor you may choose. Ten percent of your opportunity lies in your environment. The other 90 percent lies within yourselves.

May God keep you and lead you and prosper you, that you may be good citizens, that you may be successful, spiritually and culturally as well as materially, and that you may accept this great heritage of a rich, free, enlightened Nation, and having used it for your own, pass it on, unsullied, unimpaired to those who come after you.

Federal Land-Bank Loans

EXTENSION OF REMARKS

OF

HON. REID F. MURRAY

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 4, 1940

Mr. MURRAY. Mr. Speaker, under leave to extend my remarks, I include the following table, which shows the amount of Federal land-bank loans made in the United States during the fiscal years from 1934 to 1939:

Amount of Federal land-bank loans made, by States, during fiscal years from 1934 to 1939

District and State	1934	1935	1936	1937	1938	1939
District 1:						
Maine	$1,096,500	$1,103,700	$530,000	$205,500	$129,700	$68,400
N. Hampshire	375,300	169,800	103,800	73,000	79,200	66,600
Vermont	1,188,400	568,500	310,300	238,000	153,900	174,900
Massachusetts	1,623,500	993,900	458,900	529,500	421,700	241,600
Rhode Island	243,300	149,700	127,300	117,200	78,100	59,700
Connecticut	880,800	709,300	472,700	496,400	347,500	398,200
New York	7,047,200	5,485,000	2,320,400	2,331,100	1,573,200	1,654,200
New Jersey	2,092,200	1,623,600	606,200	576,000	575,100	420,500
Total	14,547,200	10,803,500	4,929,600	4,566,700	3,358,400	3,084,100

Amount of Federal land-bank loans made, by States, during fiscal years from 1934 to 1939—Continued

District and State	1934	1935	1936	1937	1938	1939
District 2:						
Pennsylvania	$4,345,200	$3,350,500	$1,109,400	$864,700	$816,400	$684,800
Delaware	263,800	225,800	74,700	68,800	57,500	28,100
Maryland	2,687,900	1,867,900	959,300	543,800	416,500	202,600
Virginia	6,246,200	3,311,100	1,182,200	725,000	670,200	548,100
West Virginia	1,302,800	832,200	315,300	240,900	197,400	256,300
Puerto Rico	51,300	795,600	832,900	347,200	250,800	141,700
Total	14,897,200	10,383,100	4,473,800	2,790,400	2,408,800	1,861,600
District 3:						
North Carolina	6,466,600	4,473,200	779,800	528,200	446,700	654,849
South Carolina	6,821,600	2,020,900	405,500	258,200	265,700	226,700
Georgia	8,603,100	2,651,000	564,600	388,900	542,208	619,500
Florida	5,663,400	1,768,600	463,100	243,700	147,000	311,000
Total	27,554,700	10,913,700	2,213,000	1,419,000	1,401,608	1,812,049
District 4:						
Ohio	20,053,900	14,605,500	3,453,700	1,974,300	1,461,700	1,884,500
Indiana	23,199,400	13,947,400	3,461,900	1,888,800	1,645,600	1,773,500
Kentucky	13,364,400	6,491,300	1,566,600	900,500	573,000	778,800

Total	18,817,549	13,798,600	4,348,100	3,379,100	3,563,700	3,733,800
Grand total	566,198,245	449,773,870	164,576,500	77,296,200	55,703,752	51,033,849

On December 31, 1932, there were 500,537 Federal land-bank loans outstanding, amounting to $1,128,564,000, an average of $2,254 per farm, and on March 31, 1940, there were 617,328 loans outstanding, amounting to $1,890,432,312, an average of $3,062 per farm.

The significant point in connection with the above table is the concrete evidence of how the Farm Credit Administration has "bogged down." This is evidenced in the figures which show that while over $566,000,000 worth of Federal land-bank loans were made in 1934, only $51,000,000 worth of loans were made in 1939, and very few of these were original loans. In fact, most of them were a refinancing of the same farms.

Farm values declined, due largely to low agricultural prices. The farm price of butter has averaged less than 26 cents on the farms of the country during the past 7 years, and cheese has averaged only 13.2 cents per pound. Butter averaged 32 cents per pound the last 4 Republican years and 35 cents per pound the 7 pre New Deal years. Cheese averaged 14.7 cents per pound the last 4 Republican years and 17.5 cents the last 7 pre New Deal years.

The question arises, if these farms could not be paid for with 14.7-cent and 17.5-cent cheese and with 32-cent and 35-cent butter, how are they going to be paid for with 26-cent butter and 13.2-cent cheese, or the 12.7 cents per pound for cheese we have received in 1938 and 1939?

On December 31, 1932, 45 percent of the Federal loans were delinquent, and on December 31, 1939, 25 to 50 percent were delinquent, and in many farm districts that have not received the enormous subsidies from the United States Treasury, over 50 percent of all the Federal loans were delinquent.

Over 84,000 farms have been foreclosed by the Farm Credit Administration when the farmers could not pay 3½- and 4-percent interest and the New Deal has been starting up new farm owners with 40-year loans at 3-percent interest in competition with them.

Millions of dollars have been used to start up new farm owners when this money should have been used to help the farmer who was already on the farm.

New Deal low farm prices and other factors have caused a decrease in general farm values. This is shown in the following table for the Seventh Wisconsin District:

	1930	1935	1938
Adams	$6,035,149	$5,049,150	$4,944,090
Green Lake	13,713,783	10,508,441	10,162,066
Langlade	10,336,481	7,375,152	7,070,951
Marathon	39,739,976	34,271,805	33,705,991
Marquette	6,349,335	5,353,671	5,378,063
Portage	16,459,280	13,515,710	13,239,059
Shawano	21,014,718	18,062,418	17,727,053

Waushara	13,879,665	10,799,647	10,500,530
Wood	16,909,136	12,892,422	12,752,945
Total	168,489,536	137,537,638	134,745,741

Source: Wisconsin Tax Commission.

The President has twice vetoed the reduction in interest rates on Federal farm mortgages, and twice Congress has had to pass this reduction of interest over his veto.

Mr. Wallace is evidently trying to make a political issue of the low-interest rate to farmers, but the first thing he must do is to educate the members of his own party. Little support was given to Mr. Wallace's farm credit bill by the Democratic members of the Agricultural Committee of the House. Fifteen of the 25 members of the committee are of his own party. He must educate the other 80 percent of the members of the Agricultural Committee that belong to his party.

While the New York Times of May 5, 1940 quotes Mr. Wallace as saying in a brief preamble to his prepared talk that he did not believe "the Republicans know a darn thing about the farm problem. I know because I have spent 10 years trying to get them to understand it," I am sure Mr. Wallace will need all his energy to educate the members of his own party before he branches out in derision of the party of his fathers.

Importation of Silver Fox Pelts

EXTENSION OF REMARKS

OF

HON. JOSHUA L. JOHNS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 4, 1940

EDITORIAL FROM THE AMERICAN FUR BREEDER

Mr. JOHNS. Mr. Speaker, the manner in which a certain group of fox breeders of our Nation were misrepresented

before the Ways and Means Committee of the House of Representatives is shown in the following editorial from the April 1940 issue of the American Fur Breeder:

[From the American Fur Breeder for April 1940]

I HAD A HUNCH—NOW I'M SURE!

There's a wild tale going the rounds that the import quota on silver foxes was secured through the political influence and maneuvering of President L. J. O'Reilly, of the American National and his satellite, Maurice Fitzsimmons, of Fond du Lac. According to the tale these two worthies suggested to administration leaders that Republican attacks on the trade-treaty program could be offset by coming to the rescue of the relatively insignificant silver-fox industry and thus prove the administration's deep concern over the welfare of American industries and the elasticity of the trade-treaty program.

I don't doubt that the gentlemen made the suggestions to the administration leaders or that these leaders found the suggestions good. In fact, the Wisconsin Fox and Fur Breeders' Association, the president of which is Mr. O'Reilly, passed and sent a resolution to the House Committee on Ways and Means thanking the administration for placing an import quota on silver fox and strongly upholding the administration's trade-treaty program. Mr. Fitzsimmons made a personal appearance before this committee and he also upheld the trade-treaty program. Part of his statements are being reprinted in this issue of the American Fur Breeder.

But to get back to the import quota and how it came about. The two gentlemen above named had no more to do with securing the quota than a thousand other fur farmers who used their influence with their Congressmen, Secretary of State Hull, the Committee for Reciprocal Information, and even the President of the United States. It was the protests from fur farmers all over the United States that poured into official Washington before Mr. O'Reilly and Mr. Fitzsimmons ever went near Washington that paved the way for the import quota.

The American silver-fox industry was given the protection of import quota restrictions because the mass of evidence pouring into Washington woke the administration up to the fact that thousands of fox farmers scattered from coast to coast would be ruined unless the flood of foreign pelts could be stemmed. And don't forget that the ruination of thousands of fox farmers would have had repercussions in the Nation's press and in the halls of Congress that would have seriously upset the administration's entire plans and policies for continuing the reciprocal-trade agreements.

To give you an idea of the distorted viewpoint of a penny-ante politician, read the deliberate attack on Ed Fromm in Mr. Fitzsimmons' remarks to the Committee on Ways and Means. Here he deliberately committed the American fur breeding industry to the administration's policy of low tariff or free trade with foreign nations. Here he delberately accused Ed Fromm of being the single, solitary stand-out—the only American fur farmer who is opposed to low tariffs and the trade-treaty program.

The statements are false to the core. Ninety-nine percent of the American fox and mink breeders believe in adequate tariff protection to insure profitable pelt values and the maintenance and safeguarding of a profitable domestic market for their products. This is the stand that Ed Fromm takes and he has repeated it many, many times. This is the stand that John Nieman takes as evidenced by his letter to his own Congressman. This is the stand that the editor of the American Fur Breeder takes and this is the stand of every honest fox and mink breeder in these United States.

The import quota restrictions did certainly save our domestic silver-fox industry from going on the rocks. We all admit that and we are all grateful to our Government for coming to our rescue. But Ed Fromm knows and I know and all the rest of us know that this is only temporary protection. And we all know that the present tariff of 35 percent on foreign silver fox is wholly inadequate to protect American market levels and American fox breeders. As American citizens and businessmen we have every right to plead our cause and our Government owes us every protection. And let no man tell you that you haven't this right or that you are a traitor to the Government if you demand your rights.

Mr. Fitzsimmons got a free ride to Washington as a member of the committee selected at the Chicago conference. On that trip he openly proclaimed that he stood for ample tariff protection for American fox breeders. So did his generalissimo, Mr. O'Reilly. And now this "misrepresentative" of the American fur-breeding industry goes to Washington again and falsely puts us on record as a shifty, vacillating group of lunkheads.

Things have come to a pretty pass in our industry when a basic agricultural industry like fur farming must depend on the machinations of cheap fur-farm politicians to defend its business interests in the Nation's Capitol. The only way to set the administration right with respect to your real attitude is to write to your bewildered Congressman and tell him you have been falsely represented and "sold down the river."

What will your choice be? A nincompoop who knows little about fur farming and who represented nobody at Washington except himself and the politicians who sent him down there, or several thousand practical, honest fur farmers who believe in the same things you and I do?

And let me add a word of warning. This is a shining example of the kind of "misrepresentation" you can expect from a Federation of Fur Farmers' Associations controlled and especially manipulated by a few politicians whose chief stock in trade always has been and always will be selfishness and chicanery. I had a hunch—now I'm sure.

Return the American Market to the American Farmer

EXTENSION OF REMARKS
OF
HON. GEORGE W. GILLIE
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 4, 1940

Mr. GILLIE. Mr. Speaker, agriculture is the backbone and the lifeblood of the eight northeastern Indiana counties which comprise the Fourth Congressional District. This district, which borders Michigan on the north and Ohio on the east, has more than 19,500 of the best farms in America. And the products of these farms, with all due respect to my colleagues from the Corn Belt, are as fine in quality as any in the world.

Each year the industrious farmers of my district till more than 1,000,000 acres of soil and contribute to the food supply of the Nation over 7,000,000 bushels of corn, 3,000,000 bushels of wheat and oats, 2,000,000 bushels of potatoes, 40,000,000 gallons of milk, 1,000,000 pounds of butter and wool, and 9,000,000 dozens of eggs—to mention only a few of our principal products.

Agriculture is mighty important to my district, contributing directly to the support of over 85,000 of my constituents. Indirectly it supports the entire social and economic fabric of every resident of every city, village, and hamlet in my district.

It is not surprising, therefore, that the citizens of northeastern Indiana take more than casual interest in Government policies and programs which affect—favorably or unfavorably—the welfare of the American farmer.

I believe that this interest should be encouraged, and it is the purpose of these remarks to present some facts and figures concerning a Government program—the trade-agreements program—about which I want my constituents to be more fully informed.

Mr. Speaker, it is one thing to produce large quantities of farm products, as the farmers of my district are doing, and quite another to find profitable markets for them. In recent years, with farm income at a shameful level and vast surpluses accumulating, it has become increasingly difficult to find such markets.

One reason for this is that the American market—our home market—no longer belongs to the American farmer. Gradually but surely it is being turned over to the farmers of other nations.

Who is to blame? The finger of guilt points directly to our own Federal Government. The trade-agreements program, fostered by the New Deal, has permitted foreign countries to import farm products—many of them duty free—at starvation prices in direct competition with our own.

In other words, while the Government is paying billions of dollars to our farmers to curtail surplus crops, it is at the same time encouraging the importation of vast quantities of these same surplus crops from abroad. "Consistency, thou art a jewel."

FACTS REFUTE CLAIMS OF THE NEW DEALERS

New dealers have made persistent efforts to convince our farmers that they are being benefited by the trade-agreements program and that our imports of farm products are so trifling as to render them unimportant. The facts, however, tell a different story.

During the fiscal years of 1937 and 1938 our imports of competitive farm products averaged $537,198,000 annually. The average acreage under cultivation in the United States during these years was 341,475,000 acres; the average value of crops grown per acre was $16.02; and the acreage displaced by competitive farm imports for the period was 33,533,000 acres per year.

Does that seem like an unimportant matter?

The value of all crops grown in my congressional district during 1938 was only $16,000,000—or less than 3 percent of this amount. For the entire State of Indiana the figure was less than $165,000,000.

During 1938 the total value of all crops grown in Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, Connecticut, New York, New Jersey, Pennsylvania, Delaware, Maryland, and Virginia was only $533,014,000. These figures, of course, refer only to crops grown, not livestock products, in the States named.

Mr. Fred Brenckman, Washington representative of the National Grange, summed this situation up in a recent radio speech, as follows:

> The land on American farms that has been displaced by competitive imports is larger than the reduction in acreage that has been brought about since 1933 in connection with the corn- and cotton-control program. So it will be seen that while the Government, under the guise of soil conservation, is paying the farmers of the country approximately $500,000,000 a year to reduce acreage and production, under the trade-agreements program, it is not only permitting but actually encouraging competitive imports of farm products valued at the same amount. * * * In view of all these facts it should be agreed that agricultural conditions would greatly improve if the American market were given more largely to the American farmer.

HOW THE NEW DEAL HAS ROBBED INDIANA FARMERS OF THEIR MARKETS

Mr. Speaker, to impress more clearly on the farmers of my district the significance of these competitive imports, and to illustrate how their markets have been taken away from them, I have prepared a table showing the average annual yield of principal farm products in the eight counties I represent—Allen, Adams, De Kalb, Lagrange, Noble, Steuben, Wells, and Whitley.

I am now going to give import figures for some of these crops and suggest that they compare them with the figures in the table, which appears below.

First let us consider corn, the No. 1 crop in my district and in the State of Indiana. In 1931, before the trade-agreement program went into effect, we imported only 335,000 bushels of corn. In 1936, however, under the trade-agreement program, we imported 86,000,000 bushels of corn—255 times as much. There is no better corn country in America than northeastern Indiana, but it would take my farmers more than 12 years to produce that amount of corn.

Not counting hay, which is largely used on the farm, wheat is the next largest crop in my district. What has happened to the American wheat market? In 1938, wheat imports totaled 3,829,000 bushels. The following year—1939—wheat imports rose 280 percent, as the American market was glutted with 10,747,000 bushels of foreign wheat.

The next largest crop in my district is oats. Two years ago—in 1938—our imports of oats totaled only 7,183 bushels, a comparatively small amount. But 1939 was a different story. In this year our home market was flooded with 4,293,000 bushels of oats, with severe detriment to our oat farmers.

Here are some other startling import figures:

In 1938 we imported 126,000 bushels of barley; in 1939, 776,000 bushels. In 1938 we imported 45,820,000 pounds of potatoes; in 1939, 93,859,000 pounds. In 1938 we imported 104,274,000 pounds of raw wool; in 1939, 245,970,000 pounds. In 1934 we imported 59,000 head of cattle; in 1939, 753,570 head. In 1932 we imported 34,000 pounds of pork; in 1937, 16,500,000 pounds.

These are all products of the Fourth Indiana District, all produced in large quantities under American cost standards. At one time they were sold on the American market at a fair price. Today they are sold at far below the cost of production in direct competition with low-cost foreign products.

THE AMERICAN FARMER HAS BEEN SOLD DOWN THE RIVER

Mr. Speaker, it has been charged that the New Deal has sold the American farmer down the river. I submit that the above facts substantiate this charge. The American farmer—the thrifty farmer of my congressional district—has been robbed of his just rights. His rich home market has been wrested from him and no new markets have been found to replace it. The protection he once received from a sympathetic Government has vanished.

Is it any wonder that farm prices have remained below parity or cost of production during the 7 New Deal years? Is it any wonder that our farmers are still suffering from the depression?

In this connection it is interesting to recall that in 1932 President Roosevelt, in a desperate bid for the farm vote, solemnly promised American farmers that he would protect their home market from the disastrous effects of cheap foreign competition by maintaining protective tariff rates on competitive farm products. In one of his campaign speeches he said:

> I know of no effective excessively high tariff duties on farm products. I do not intend that such duties shall be lowered. To do so would be inconsistent with my entire farm program, and every farmer knows it and will not be deceived.

That promise, along with many other preelection promises, was conveniently forgotten. As part of his good-neighbor policy toward foreign farmers, the President, through trade agreements, has drastically reduced tariff duties on 163 competitive farm products, and has invited foreign producers to flood the American market with products cheaply produced on foreign soil.

A partial list of foreign farm imports upon which duties have been reduced 25 to 50 percent under the New Deal includes: Corn, oats, barley, rye, potatoes, cattle, hogs, pork, bacon, milk, cream, cheese, chickens, ducks, turkeys, eggs, apples, berries, clover, alfalfa, and cabbages, to mention only a few.

All of these products are produced by farmers in the Fourth Indiana District, and all are produced in surplus quantities in the United States.

Mr. Speaker, on behalf of the 19,500 Hoosier farm owners and operators I have the honor to represent in Congress, I demand that the New Deal return the American market, the richest and best in the world, to the people who developed it—the American people.

Yield of principal farm products in 8 counties of Fourth Indiana District for an average year

Product	Unit	Allen	Adams	DeKalb	LaGrange	Noble	Steuben	Wells	Whitley	Total

Exports and Imports of Farm Products

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 4, 1940

Mr. REED of New York. Mr. Speaker, in 1932 the Democratic Party condemned the Republicans for having "ruined our foreign trade," and pledged themselves "to bring the Nation back to the proud position of domestic happiness and financial, industrial, agricultural, and commercial leadership in the world."

Eight years later, in 1940, we find that our foreign trade, instead of progressively improving, has steadily deteriorated under New Deal policies. The seriousness of this is forcefully brought home when one realizes that a sound economy is essential to adequate defense and preparedness.

According to the Department of Agriculture, domestic agricultural exports in 1939 were valued at $655,000,000, compared with $662,000,000 in 1932, a decrease of 1 percent. Imports of competitive agricultural products, however, were valued at $526,000,000 in 1939, compared with $296,000,000 in 1932, an increase of 77.7 percent. As a consequence, in 1939 competitive agricultural imports were 80 percent of domestic agricultural exports, compared with only 45 percent in 1932.

United States foreign trade in agricultural products, 1932–39

Year ended Dec. 31—	Domestic agricultural exports	Competitive agricultural imports [1]	Competitive imports as percentage of agricultural exports
			Percent
1932	$662,000,000	$296,000,000	45
1933	694,000,000	365,000,000	53
1934	733,000,000	413,000,000	56
1935	747,000,000	589,000,000	79
1936	709,000,000	695,000,000	98
1937	797,000,000	868,000,000	109
1938	828,000,000	477,000,000	58
1939 (preliminary)	655,000,000	526,000,000	80

[1] Competitive agricultural imports include all agricultural imports that are similar to agricultural commodities commercially produced in the United States, or that are interchangeable to any significant extent with such United States commodities.

Compiled from Commerce and Navigation of the United States and official records of the Bureau of Foreign and Domestic Commerce.

INCREASED FARM IMPORTS

During the last 7 years the New Deal has been trying to make progress by going in all directions. While its inconsistencies are many, there is perhaps no greater inconsistency than that of its domestic agricultural policy and its foreign trade policy. The New Deal farm program operates in such a way as to impede the free movement of American farm surpluses to the markets of the world. The reciprocal trade-agreement program, on the other hand, operates so as to open our great industrial markets to the surplus products of other countries.

According to the Department of Agriculture, imports of supplementary farm products, or products that are similar to those produced in the United States, have increased from 296 million dollars in 1932 to 526 million dollars in 1939, or 77.7 percent.

Imports of cheese have increased from 12.1 million dollars in 1932 to 12.8 million dollars in 1939, or 5.8 percent.

Imports of vegetable oils increased from 29.1 million dollars in 1932 to 50.9 million dollars in 1939, or 75 percent.

Imports of flaxseed increased from 5 million dollars in 1932 to 18.4 million dollars in 1939, or 268 percent.

Imports of molasses increased from 5.8 million dollars in 1932 to 8.2 million dollars in 1939, or 41 percent.

Imports of wool increased from 2.8 million dollars in 1932 to 23.9 million dollars in 1939, or 750 percent.

Imports of unmanufactured cotton increased from 5 million dollars in 1932 to 8.3 million dollars in 1939, or 66 percent.

Imports of canned beef, including corned beef, increased from 2.1 million dollars in 1932 to 8.6 million dollars in 1939, or 310 percent.

Imports of cattle (dutiable) have increased from 1.5 million dollars in 1932 to 20.2 million dollars in 1939, or 1,250 percent.

Imports of hides and skins increased from 22.4 million dollars in 1932 to 46.6 million dollars in 1939, or 108 percent.

Imports of sugar increased from 95.8 million dollars in 1932 to 124.6 million dollars in 1939, or 30 percent.

Imports of unmanufactured tobacco have increased from 27.3 million dollars in 1932 to 36.9 million dollars in 1939, or 35 percent.

Imports of nuts have increased from 10.2 million dollars in 1932 to 14.5 million dollars in 1939, or 42 percent.

Imports of fodders and feeds have increased from 2.3 million dollars in 1932 to 11.3 million dollars in 1939, or 395 percent.

Imports of wheat, corn, and barley malt have also increased.

FOREIGN TRADE IN AGRICULTURAL PRODUCTS

A major objective of the New Deal was to increase foreign markets for our surplus agricultural products. The New Deal has not only failed to achieve this objective but has also failed to keep the markets that were already ours. According to the Department of Agriculture, total exports of all commodities have increased from 1,576 million dollars in 1932 to 3,123 million dollars in 1939, or 98 percent. Agricultural exports, however, dropped from 662 million dollars in 1932 to 655 million dollars in 1939, or 1 percent.

As indicated in the following table, farm exports were 42 percent of total exports in 1932 and only 21 percent in 1939.

Export value: Agricultural compared with all commodities, 1932–39

Year ended Dec. 31—	All commodities	Total agricultural exports	Percentage, total agricultural, of all commodities
			Percent
1932	$1,576,000,000	$662,000,000	42
1933	1,647,000,000	694,000,000	42
1934	2,100,000,000	733,000,000	35
1935	2,243,000,000	747,000,000	33
1936	2,419,000,000	709,000,000	29
1937	3,299,000,000	797,000,000	24
1938	3,057,000,000	828,000,000	27
1939 [1]	3,123,000,000	655,000,000	21

[1] Preliminary.

Mannerheim's Heroic Message

EXTENSION OF REMARKS
OF
HON. ROBERT G. ALLEN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 4, 1940

Mr. ALLEN of Pennsylvania. Mr. Speaker, when the illustrious deeds of all military history are written in the book of time, I am certain that high up on its pages will be written the epic of the gallant fight against overwhelming odds made by the soldiers of the Republic of Finland in its war against Russian aggression. We all of us know the thrill that came to our hearts, when, day after day, the dispatches told of the brave and almost superhuman feats of this small army, outnumbered 40 to 1.

Then, with the coming of peace, a hard peace, we have seen this same nation turn resolutely to the tasks of reconstruction. The Christian fortitude which this people have displayed should be at once an inspiration and a challenge to us here in America, who face perilous times in a maelstrom of European war.

Under leave granted me, Mr. Speaker, I desire to extend into the CONGRESSIONAL RECORD as a part of my remarks the stirring and inspiring message to the soldiers of Finland

issued by General Baron Mannerheim on the fateful March 14, following the signing of a compulsory peace with the Soviet. This message should live in history; it breathes the free spirit of a people who remain free and independent, who have preserved their democracy, preserved their institutions, preserved their religion, and preserved, above all, their souls.

FIELD MARSHAL MANNERHEIM'S ORDER OF THE DAY TO THE ARMY OF THE REPUBLIC OF FINLAND, THURSDAY, MARCH 14, 1940

Soldiers of Finland's glorious army! Peace has been concluded between our country and Soviet Russia. It is a hard peace, giving Russia practically every battlefield on which you have shed your blood for all that you hold dear and sacred. You did not want war. You loved peace, work, and progress. But the fight was forced upon you, and the deeds you have performed will shine for centuries in the annals of history.

More than 15,000 of you who went out will not see your homes again, and how many are they who have not lost forever their ability to work? But you have hit back hard, and if 200,000 of the enemy now lie beneath the frozen snows or with sightless gaze contemplate our starry skies, the blame does not lie with you. You did not hate them. You wished them no harm. You merely followed the stern law of war—to kill or die.

Soldiers, I have fought on many battlefields, but never yet have I seen your equals. I am proud of you, just as if you were my own children; equally proud of him from the northern tundras, of him from the broad plains of East Bothnia, from the Karelian woods, from Savo's villages. I am proud of those who come from the flourishing farms of Häme and Satakunta; of those from the whispering birchwoods of Uusimaa and Finland proper.

Officers and men, I thank you all. But I particularly wish to draw attention to the courage and devotion to duty of the reserve officers, and the skill with which they carried out a work which normally was not theirs. Also their sacrifice was in proportion the greatest in the war and given gladly and with unswerving loyalty.

I thank the staff officers for their ability and untiring work. Finally I thank my nearest colleagues—the chief of the general staff, the quartermaster general, the Army commanders, the corps and divisional commanders—who in many cases made the impossible possible.

I thank all the services of the Finnish Army, who in brilliant combat achieved such fine exploits and who, from the first day of the war, went with great boldness to the attack on an enemy many times stronger and armed with untried weapons. I thank them for the tenacity with which they clung to every inch of soil of their native land. The destruction of more than 1,500 Russian tanks and over 700 airplanes bears witness to the heroic deeds frequently performed by individual men.

With joy and pride I think of Finland's Lotta Svärd and of their contribution to the war, their spirit of sacrifice and untiring work in all branches, thus liberating thousands of men for the front line. With their courageous spirit they supported and stirred on the army whose gratitude and appreciation they fully earned.

A place of honor has been filled by the thousands of workers who, during the bitterest days of the war, and under air attacks, faithfully and often as volunteers, remained at their work producing the necessities of war; and also those who under enemy fire untiringly worked on the fortifications. In the name of our country I thank you all.

Despite all courage and the will to sacrifice, the Government has been forced to make a peace on hard terms. This nevertheless has its explanation.

Our army, including reserves, was insufficient; we were not equipped for a war with a great power. While our brave soldiers were defending our frontier, it was necessary with superhuman efforts to make up the deficiencies, to create a line of defense which before did not exist, and to seek the help which did not arrive. It was a question of getting arms and equipment, at a time when our country was feverishly preparing for the storm which is now sweeping over the world.

Your deeds have aroused admiration the whole world over; but after three and a half months of war we still stand alone. We did not succeed in obtaining any foreign aid, except for two battalions reinforced by some artillery and airplanes, whilst our own troops, fighting day and night, without a chance of relief, stood up to the attacks of every new enemy formation till long past physical and moral breaking point.

When at last the history of this war is written the world will see what deeds you have performed.

Without the generous help of ammunition and equipment given by Sweden and the western powers we could not have withstood for so long the innumerable guns, tanks, and airplanes which were thrown against us. Unfortunately, the splendid promise of help given us by the Western Powers could not be fulfilled, owing to our neighbors' concern for their own safety. They refused the right of passage to the Allied troops.

After 16 weeks of fierce struggle, without resting day or night, our army stands today unbeaten by an enemy which, in spite of enormous losses, has only grown in numbers.

Neither has our home front wavered, despite the innumerable air attacks which have spread death and terror among our women and children.

Our towns, which have been burned down, our villages lying far behind the front, even as far back as the western frontier, are a striking witness of what our people have had to undergo during the past months.

It is a hard fate for us now that we have been obliged to give up to a race, which is foreign and of a different philosophy and moral standards, land which we tilled for centuries by the sweat of our brow.

We will spare no effort to provide homes and better living conditions within the remaining territories for all those whose houses and property have been ruined.

And we will be prepared as before to defend our diminished mother country with the same determination and strength with which we fought for her undivided.

We have the proud knowledge that we have a historic mission to fulfill: To protect the western civilization which for centuries has been part of our heritage. We also know that we have paid to the last penny that debt which we have owed to the west.

MANNERHEIM.

America Prepare

EXTENSION OF REMARKS

OF

HON. ALBEN W. BARKLEY

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Tuesday, June 4 (legislative day of Tuesday, May 28), 1940

ADDRESS BY HON. LISTER HILL, OF ALABAMA, AT CONFEDERATE MEMORIAL EXERCISES

Mr. BARKLEY. Mr. President, I ask unanimous consent to have printed in the Appendix an address delivered by the junior Senator from Alabama [Mr. HILL] at the Confederate memorial exercises, Arlington National Cemetery, Sunday, June 2, 1940, on the subject, America Prepare.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is fitting that we meet to pay our reverent tribute to the Confederate dead; not merely because an hour set apart for this memorial has come again in the regular succession of days, but also because the time itself draws us to the contemplation of their lives. We shall be strengthened and fortified for the patriotic duties which lie ahead of us by reflection upon the glorious sacrifices which they made for the ideals they cherished unto death. The spirit which made them immortal must be our spirit. It led them to death upon the field of battle, but it will lead us to life; to a life of freedom and liberty for ourselves and our descendants; to a life of peace and security in a world gone mad.

The first lesson which we, as their heirs of destiny, must learn is the lesson of sacrifice. A man cannot give to his country in its time of need in niggardly fashion. He must give without stint and without reservation. He cannot set a price or a condition upon his patriotism: it is a thing without price and beyond all condition. Our country has given to us, her children, more bounteously than any other nation upon the face of the earth. To be worthy of her we must give of ourselves more generously, more grandly, more gloriously than any other peoples upon the earth. To do less would prove our unworthiness, would demonstrate that a glorious heritage of valor has dwindled to a pitiable pittance of patriotism.

It is the habit of the unreflecting to look upon the events of the present and exclaim, "Strange things are abroad; new terrors such as the world has never seen stalk upon defenseless people." Such is not the case. Conquerors have ravaged inoffensive peoples since the dawn of history. Traitors have sold their country for a price, and patriots have made vain sacrifices since time began. Peace-loving peoples have been subdued by ruthless invaders and high civilizations trampled underfoot never to rise again. We need not go beyond the limits of our own hemisphere to find terrible examples. Mexico and Peru were overrun by invaders, better equipped with the instruments of war. The civilization of the Mayas and the Incas vanished from the earth. Their science and their knowledge perished with them, and all that remains are strange monuments with inscriptions we cannot read and the names of their heroes and their gods which linger in our memories and evoke a faint and momentary pity.

Their fate has for us a tragic lesson. That lesson is also exemplified in the lives of those Confederate soldiers whose memories we commemorate. It is a lesson all nations must learn on peril of their lives. It teaches us that courageous hearts alone are of no avail against superior instruments of war. Courage without material resources cannot win against a foe abundantly supplied with all the engines of war. The South had a courage that was sublime. Yet the South, from the beginning, despite the courage

of its soldiers and the transcendent genius of Lee and of Jackson, was foredoomed to lose the War between the States. Lacking the material resources, it faced an impossible task.

But it is not enough to be blessed by nature with the raw materials out of which the instrumentalities of war can be forged. These raw materials must be turned by human labor and advanced science into the weapons of war. That transformation cannot be wrought in a day. It requires long physical effort and concentrated thought. It is a task so colossal that we in America are fortunate in having as our leader a man who appreciates completely the effort that the United States must make if it is to live.

A failure to appreciate the magnitude of the task confronting them is responsible for the plight of England and France today. A nation cannot prepare to defend itself half-heartedly. One does not go to war delicately. To win wars one must prepare for war with all one's power, all one's strength, and all one's soul.

England and France, and I mean the people of England and France, the men in the streets, the workers in the fields, the toilers in the factories and mines, failed to realize that one supreme task confronted them. As a result they were all too slow in girding themselves for war. Their adversary was making ready, openly, arrogantly, yea contemptuously, for 7 years while the prospective victims of that preparation gave it insufficient heed. It was somehow beyond their ability to comprehend.

Lesser nations lived within the shadow of the growing monster and trusted too long in the principles of right and justice for their defense. They could almost hear the jangle of the war-making machinery and some of them no doubt could see the black plumes floating over the great factories forging the tools of war, but somehow they never grasped the terrible meaning of that tireless preparation. They were all too tardy in their counter-preparations, all too short of vision to combine their strength while they were free people that they might continue free.

The path of destiny was clear for them to see and they glimpsed it dimly or not at all. They heard but did not heed the rumblings of the storm. Those rumblings now come to us. Shall we heed them while yet there is time or shall we disregard them and suffer by default the destruction of all that we cherish?

We meet to honor the memory of great soldiers. I should be unworthy of the honor you have done me if I did not speak as those soldiers would have me speak. If they could rise from their graves and speak again with the tongue of the living they would not pause to seek out loved ones; with one voice they would cry out, those men in gray, those men in blue, "America, prepare!"

I can hear them now, the valiant dead, crying out to us to be valiant, to cherish and defend. I hear America make answer, "We shall cherish. We shall defend."

Just as a nation cannot live half slave and half free, so the world cannot live half slave and half free. Just as a man cannot serve two masters, so the world cannot serve two warring ideals. Those who worship brute force must inevitably come to hate those who cherish the Christian ideals of justice, temperance, and mercy. The world is too small today to contain such antagonistic faiths.

No longer do we live in a world of pleasant dreams. The clank of the tanks and the wail of the sirens have shattered our dreams. Let us face reality in a world of grim realities. The love of peace does not give any guaranty of its possession. Respect for the rights of others does not guarantee that others will respect our rights. The only guaranty of our security is in the might of our strong right hands.

In that might I have confidence. We in America have the capacity to match strength with strength, and invention against invention. The material resources are at hand. The spiritual resources are abundant in the great soul of the American people. The peril is great but the power to meet it is far greater.

The scientific progress of man has made the world small; that progress turned to war has placed the world in peril; that progress turned to defense by American hands will bring the world to safety. We have in America the foremost scientists of the world. Those scientists must forge greater and more improved weapons of defense than Germany has forged for offense. We must think in terms of the motorized, electric world of today. We must use our imaginations. Time no longer moves slowly. It travels on the wings of the morning and those who are slow in awakening to its speed awaken to a state of slavery. Distance has shrunk to an ineffective obstacle and months have been compressed into days, yea, into a matter of hours. Destruction strikes like the lightning and death rages like a hurricane. We must visualize all the possibilities of offensive and defensive action and utilize them with audacity. We have done it before. We can do it again.

The strife which gave us the heroes whose memory we cherish produced inventions which changed the art of war. The invention of the Monitor and the Merrimac revolutionized naval construction throughout the world. The wooden ship of war became a useless thing.

The development of trench warfare had its origin in the defenses of the soldiers who sleep so near at hand.

The "blitzkrieg" of today is the cavalry of J. E. B. Stuart and Nathan Bedford Forrest mounted upon the mechanical horses of this modern age.

I, for one, do not attribute to the Germans of today the qualities of supermen. The Allies made the disastrous mistake of thinking in terms of the past. Those who triumph must think in terms of the present—and the future. Action is a rule of life; it is an inexorable rule of war. Warriors do not conquer by digging holes in the ground and hiding in them.

Neither can governments hide from their obligations. The citizen chafing under the deficiencies and delinquencies of his government is a ready recruit for the "fifth column" which has played so great a part in the present war. But contented men do not revolt; satisfied citizens do not become traitors. Agitators and organizers, Fascists and Communists, can make no real converts among men and women who feel their government is a good government, a just government, an enlightened government.

During the past 7 years great progress has been made by our Government in the discharge of its duties toward all the people, the helpless, the poor, and the underprivileged. That progress and the steps leading to it must not be forgotten or cast aside.

We are not, we can never be a nation of classes. We are not and we can never be a nation in which the North, the South, the East, and the West feel themselves a section apart. In all truth the interest of one is the interest of all. Injustices and discriminations between sections should not be sought and cannot be tolerated. We as a nation face one problem. We must face it as one nation.

And so to the men and women of America, to the executive in his office, the manufacturer in his plant, the farmer in his fields, and the toilers and laborers of America, wherever they may toil, I say, "Give—give of yourself; give of your life—and give freely. The hour of your greatness is upon you. May your spirits rise and stand above all selfish things."

And to you, the youth of America, the hope of today and of tomorrow and all the tomorrows hereafter, to you, young men in the glory of your strength and the splendor of your spirit, I say, come forward and gird yourselves for the defense of your country. And may the glory of your achievements reflect the grandeur and the glory of the noblest human spirit. The greatest call, the greatest opportunity of the ages is for you. I hear your answer to that call and my faith is strengthened—justice and mercy shall not perish from the earth—the light our fathers kindled shall not be darkened.

Leading From the Rear

EXTENSION OF REMARKS

OF

HON. JOHN M. HOUSTON

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 4, 1940

EDITORIAL FROM THE WASHINGTON NEWS

Mr. HOUSTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a timely editorial from the Washington Daily News of June 3, 1940:

[From the Washington Daily News of June 3, 1940]

LEADING FROM THE REAR

An astonishing phenomenon of the national-defense crisis is the sluggishness with which Washington is following in the wake of public opinion.

The leaders of the administration and Congress aren't leading at all; they are being dragged along. For some reason they can't shake loose the fixed notion that they must stroke the voters gently in this election year. They haven't yet realized that this is one quadrennial when "politics as usual" won't go.

Congressional leaders of both parties, at the behest of the administration, lay plans to complete a minimum of legislation and adjourn for the conventions and the campaigning. Yet the common run of Senators and Representatives, who read their mail more closely than the veteran leaders do, testify that the people back home are urging them to stay on the job. That is exactly the sentiment one should expect from a people who believe in democratic government and want to see it meet the stern test of the times. But apparently the lawmakers, or at least the leaders, didn't expect any such reaction, and now can't believe that it is real. Anyhow, they are getting ready to quit—as always when June weather comes to the Potomac.

Nor can the lawmakers believe their eyes when they read constituents' letters and public-opinion polls showing that the people are ready, yea, eager, to pay taxes to make the Government financially strong. For too many years, in response to pressure groups, these legislators have been voting money which the Government didn't have for things that weren't essential.

They can't appreciate how profoundly shocked the people have been by the discovery that, despite all the billions spent in recent years, the Nation's defenses are in such poor order that America's voice carries little weight in a world where force alone counts. Not understanding how determined the American people have suddenly become to correct this condition, administration and congressional leaders are trying to slip up on the blind side of the public with a tax bill which would touch the minimum number of pocketbook nerves and raise only a fraction of the revenue needed. The bill provides a 10-percent boost in all income taxes

and in some sales taxes, with steeper increases in other excises. It would increase by 10 percent or more all the inequities in the present tax structure and, as usual, would get the bulk of the revenue by invisible taxes, levied without regard to ability to pay. The leaders don't pretend that this is an adequate tax bill, or even a fair one. They merely say that it is a measure they can pass quickly and go home. If they do, we'll bet they'll wish they hadn't.

Unless all the straws in the wind are misleading, Congressmen who go home without doing their duty are going to face some embarrassing questions. The country is united as it has seldom been in history—united in its determination that our defenses shall be made impregnable, regardless of the cost; that the Government's credit shall be made strong, whatever the sacrifices; that idle men and dollars shall be put to work to revitalize industry, no matter how many heads or pet political ideas are cracked in the process.

A lot of politicians who are still playing the game according to the old rules of avoidance and evasion are going to get hurt this election year. The "gimme" game has played out. An aroused patriotism is going to the polls.

Responsibilities of American Citizens

EXTENSION OF REMARKS

OF

HON. JAMES M. MEAD

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Tuesday, June 4 (legislative day of Tuesday, May 28), 1940

ADDRESS BY HON. JAMES M. MEAD, OF NEW YORK, AT SEVENTH REGIMENT ARMORY, NEW YORK

Mr. MEAD. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD a radio address delivered by me and carried over the facilities of the Columbia Broadcasting Co. at 8:15 p. m. Sunday evening, June 2, 1940. This address was delivered at the Seventh Regiment Armory in New York City in connection with this year's observance of Young Citizens' Day.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I am extremely happy to be here this evening and to join with you in this impressive observation of Young Citizens' Day. I congratulate those in charge of planning this occasion, and I extend to all of you my heartiest, my most sincere greeting.

This is an appropriate occasion and an appropriate hour to bring to you here and to you who may be at your radios as I speak some thoughts about the responsibilities of devoted American citizens in the emergency we now face.

We are the last bulwark of freedom left in the world that is not engaged in a Titanic struggle to preserve its way of life. There is not a capital in the whole of continental Europe that enjoys the peace that prevails at Washington. It is our responsibility to hold fast and firm to the blessings which we enjoy. As we insure our property, our homes, our communities by adequate police and fire protection, so, too, will we protect our shores from invasion that precedes destruction.

There is no longer room for doubt that our progress along the pathway of peace requires vast additions to our military defense. We are going immediately to work in providing those necessary weapons of defense. We have the wealth, the resources, and the industrial ability to produce the material requirements that are necessary for our adequate national protection.

But I say to you that our most serious enemy will not be the tanks, deadly gases, the flame throwers, nor the airplane bomber, nor any of the other terrifying implements of modern war. If we are made vulnerable to assault, it will be because we have failed to strengthen, to solidify, and to adequately provide the defenses of loyalty, of tolerance, of neighborliness, and of good will among our own people.

Here in America we must continue to educate ourselves in the strength and unity which comes from living side by side in peace and understanding. We must not blind ourselves to the fact that there are forces operating today in this country to arouse animosities among our people.

There are sworn enemies of our free system of government at work in our midst. Let us abolish those subversive forces. Let us erase them from our land. Let us clean our body politic of corrosive elements which impede and thwart the processes of representative government. Let us be good neighbors in every sense of the word. To be good neighbors we require unity, loyalty, and patriotic devotion.

The children of England, Germany, Ireland, Italy, Poland, and other lands who settled this Nation, who built its communities, and who served in its wars, are devoted to its democratic ideals.

Regardless of religious affiliation or of racial ancestry, we must all stand shoulder to shoulder in a united aim to defend the principles of equal justice for both the big and the small, for the weak and the strong. We must not be pro-Ally, pro-British, pro-German, or pro-anything but pro-American in this crisis.

If such is our faith, it follows that we must not assume the role of a complacent, self-satisfied citizen, lulled into the inertia of slumbering half-interest.

We dare not leave the arena of human rights to the demagogue, to the subversive critic, or to the advocate of intolerance, thinking him to be a harmless nuisance. Not if our eyes, ears, and minds are alert to the grim realities of today; not if we remember that democracy is not saved by laws and by implements of war alone. But, by those who will speak for it, live for it, and, if need be, defend it against attacks from within and from without.

Our security and our stability, as a representative government, requires effectiveness in national leadership and unity among all of our people. We must not turn our backs to the domestic problems which confront the Nation, nor must we blind ourselves to what could happen in the future at the hands of those who are unfriendly to our way of life.

I am warning against the inevitable; I am advocating that we be prepared in every manner against the unpredictable. We know not what lies ahead. There is uncertainty in the minds and hearts of all free people. The apprehension grows day by day as the ruthless march of the totalitarian leadership continues. Our continent must be made safe from attacks. By land, by sea, and by air. Our people must be made secure in their lives and in their homes.

As we build strong and invulnerable our military lines of defense, let us, also, be sure that we are not permitting any Trojan horse or "fifth column" to develop under the advantages and liberties of our happy system.

We must say to our subversive critics that "If my Government means anything to me, it means that its philosophy is broad enough to protect every man in his right of political opinion; every man in his liberty of speech; and every man in his freedom of religious worship."

But we must insist that, if our democracy is to work, then the springs of liberty must not be polluted with the poison of hate, covered with the slime of proscription, or drugged with the spirit of intolerance.

We may proudly declare that here in America we oppose regimentation, we respect our democratic heritage, and we reject prejudice and persecution as panaceas to be fed to hungry and desperate men.

I exhort you to persevere with all your might and main in the defense of American institutions and in the defense of democracy as we know and enjoy it. Culture, religion, and civilization depend upon your perseverance.

You must join with all the fervor and enthusiasm of genuine patriots to forge new instruments and new methods to combat the blindness of the partisan, the passion of the jingoist, the vengeance of the bigot.

Through religion, education, understanding, and fraternalism increased unity, loyalty, and neighborliness will be achieved.

Here we live in peace and brotherhood with all our neighbors. All races, creeds, and colors can find advantage and opportunity, equality and independence, dignity and happiness within our shores. A preservation of those rights and privileges has been made possible under our free system of government. Political, social, and religious difficulties abroad should make us ever more deeply appreciative of the liberties that are ours to enjoy.

Let us say again and again that we believe in democracy. Let us repeat for all the world to hear that we believe in defending the right of man to follow the dictates of his own conscience. Let us, by action and accomplishment, demonstrate, with unmistakable emphasis, that we subscribe to a philosophy which permits and encourages freedom of rational personal and public independence in thought and in action.

I ask you to live and breathe the genuine spirit of democracy. I ask you to typify, by word and deed, the embodiment of true American principle. I ask you never to forget that American democracy stands for the enthronement of law and equity, the preservation of free Government, the right to individual liberty, the education of the poor and unfortunate, the establishment of free institutions, and the protection of life and property. I ask you to constantly sow the healthful seed of good, loyal, patriotic citizenship. With such diligence, with ample safeguards, and with a fundamental faith in our doctrine of representative government, we will be able to nip any sporadic fly-by-night movement which may arise to plague, to threaten, or to undermine our America.

The plea I make tonight is a plea for loyalty to the democratic system on the part of all our people. I cannot too fervently appeal for genuine internal loyalty which will strike at the very heart and banish from this fortunate land those who are unfriendly to the American way. After all, this is our America. This is our way of life. This is all we have striven for, fought for, and defended through a century and a half of a democratic development. We must say to the enemy of our system that we will never permit dissipation from within of the strength which upholds and supports the structure of our Republic.

Loyalty, devotion to principle, and a firmness of opposition to the enemies in our midst is the way to perpetuate, against all odds, the American philosophy of life. To uphold and to support our President, regardless of partisan considerations, is the order of the

day. Loyalty to American principles, support of our national leadership, faith in the democratic system, will keep America safe and will guarantee to our people the peaceful pursuit of happiness and opportunity which we, above all else, desire.

Acquisition of French and British Islands

EXTENSION OF REMARKS
OF
HON. JENNINGS RANDOLPH
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 4, 1940

Mr. RANDOLPH. Mr. Speaker, on March 4 I introduced House Joint Resolution 482 for acquisition of British islands in the Caribbean and British Honduras. On April 10 I introduced House Joint Resolution 511 for acquisition of French islands in the Caribbean and the South Atlantic Ocean. Similar measures were introduced in the Senate by the Honorable ROBERT REYNOLDS, of North Carolina. Later Senator REYNOLDS and myself spoke on this subject through the facilities of the Columbia Broadcasting System. Sentiment for these proposals has been growing recently. In this connection I include an editorial from the Sunday Times, of Chicago, of June 2, 1940:

[From the Chicago Sunday Times, June 2, 1940]

LET'S TALK ABOUT THE ISLANDS

No one is seriously concerned over the idea of Herr Hitler and friends settling down in the Western Hemisphere by virtue of taking over certain properties now belonging to Great Britain, France, and Holland. The reason we're not much concerned is because we are universally agreed that we'll never permit it to happen—couldn't permit it.

That's well and good as far as it goes. But there hasn't been much specific push to ways and means to make sure "it can't happen here." The suggestion has been advanced in these columns and in other quarters that we take over all Western Hemisphere British and French possessions in part or full settlement of the debt hanging over from World War I.

This idea has received no official attention that's been publicized. Senator KEY PITTMAN was quoted as saying that "it is too early for discussion" of such a move. With that contention we disagree. There should be much public discussion. Official action will follow public sentiment. It is certainly time to have a program as to what we're going to do in case it becomes necessary for us to act.

Simply the physical aspects of taking over the possessions, either "protectively" or as owners, present a task of great magnitude. They are scattered from Miquelon, a French island off Newfoundland, 1,000 miles northeast of New York, to the Falklands, some 7,000 miles southeast of the same city.

Few realize how many of these French-British-Dutch possessions there are in the American half of the world.

ISLANDS GALORE ARE INVOLVED IN PROBLEM

On the continental mainland there are British Honduras, British, French, and Dutch Guiana. The islands are almost innumerable. Bermuda, lying due east of Charleston, S. C., is probably the best known. Then there are the Bahamas. These stretch in a long line from a point only 75 miles east of Palm Beach down past the coast of Cuba almost to Haiti. These are all British.

Next are the Leewards. These swing in an almost perfect arc halfway to Venezuela, and the Windwards complete the half-circle to Trinidad, almost touching South America. French, British, and Dutch possession of these are indiscriminately mingled.

Within the Caribbean itself—that is, between Cuba and Central America—are the Caymans and Jamaica—British. Further south, just above Venezuela, are Curacao, Aruba, and Bonaire—Dutch.

All of these are distinctly American islands, geographically speaking. But there are some others not so distinctly American about which we may be concerned. Due east of the outthrust shoulder of Brazil, almost exactly halfway to Africa, is the British island of Ascension. It is a miserable, worthless spot—but it is a possible naval and air base. To whom shall it belong if Britain falls?

Some 700 miles southeast of Ascension is an island which once played host to a distinguished Frenchman who had the delusion that he was Hitler—St. Helena, now British. Some 1,200 miles further south is a forsaken cluster of three islands known collectively at Tristan Da Cunha. Yet farther south, over toward the tip of South America, are two more clusters—the South Sandwich group and the South Georgia group, both British.

JUDICIAL QUESTIONS PRESENT DIFFICULTY

That's the Atlantic set-up. We shall not go into such detail as to the situation in the South Pacific. Suffice it to say that there are equal complications there, offering potential threats to the west coast of South America and to the Panama Canal. Turning from the purely physical problem of assuming jurisdiction and protection over such a horde of islands, there's another aspect to consider. That's the legal side.

Suppose that Hitler's drive continues to meet the success it has to date—and the possibility can't be discounted—and that he forces a peace upon Great Britain which includes cession of all these territories. Presumably that's the point where we'd step in.

And whose territory would we be occupying? British? Oh, no. Nazi Germany's! International law differs from domestic in that agreements signed at the point of a gun are legal and binding. In the eyes of international law the transfer would be a valid one. And we, the law-abiding United States, would be in the position of an international burglar or highjacker. We would be taking territory by force of arms. We would have committed an act of war against Germany.

In the eyes of some it seems like picking on a man who's down to urge our Government to take this problem up with Britain now. But there is too much at stake for such quibbles. Britain has more to lose by not talking about it than by any agreement which might be reached, and our own safety is at stake.

Too early to discuss the matter? Senator PITTMAN would have been closer to the truth if he had said there's hardly time to discuss the subject before we may be forced to act upon it.

The Airplane in Peace and War

EXTENSION OF REMARKS
OF
HON. JAMES M. MEAD
OF NEW YORK
IN THE SENATE OF THE UNITED STATES

Tuesday, June 4 (legislative day of Tuesday, May 28), 1940

ADDRESS BY POSTMASTER GENERAL FARLEY

Mr. MEAD. Mr. President, I ask unanimous consent to have printed in the RECORD the address delivered by Hon. James A. Farley, Postmaster General, at the National Aviation Forum banquet, held at the Willard Hotel, Washington, D. C., on May 29, 1940. The subject of the address is The Airplane in Peace and War.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

This is a tragic moment in human history. The heartbreaking struggle across the ocean is laden with significance for people the world over. We hope, we maintain, that the United States can and will escape the catastrophe of total war. Certainly all Americans, regardless of party or faction, loathe war. No party and no leader of any party desires to see the United States enter the war. I think we can avoid war, and I am convinced we will avoid entering the conflict.

But we would be faithless to ourselves, to our children, and to our country if we neglected to prepare against the attack of any conceivable enemy or combination of enemies. The world has learned to its sorrow that peaceful and honorable purposes are no protection against invasion. We have seen peace-loving, industrious, intelligent nations endeavor to remain neutral in the face of great difficulty. Yet their preference for peace did not save them. They lived in countries which were barriers to a powerful military objective. They possessed resources essential to the success of an army that asserted its right to whatever it could take.

These free peoples were the victims of a new and dreadful technique of war based largely on the airplane. Just 36 years have passed since Wilbur and Orville Wright contrived the first mechanism that lifted men above the earth in flight. It is a long cry from that simple experiment on the sand dunes at Kitty Hawk to the masses of war planes that have emerged from the distant air to inflict terror and death upon armies and helpless people. The noble machine that lifted man's spirit and enabled him to soar is being appropriated for evil purposes.

We, more than any other people, have been enabled to enrich our lives by the resource of peaceful flight. The accomplishment of American aviation in transporting people, in carrying mail and goods, is one of the finest achievements of this era. We are just at the start of that chapter in human progress. The possibilities of future development of the use of airplanes in enriching the lives of men and women beggar the imagination.

Now, however, our thoughts are compelled to turn to plans for preparing ourselves against whatever danger the future may hold. We know, if we are capable of understanding, that no nation is safe unless able to defend itself. We know, as the President has so graphically pointed out, that even our interior cities are within easy flying distance of possible airplane bases that could be used by an aggressive invader.

We have goods and riches that are coveted by other nations. If we are vulnerable, we have no reason to expect consideration. If we want to retain our material possessions, if we want to continue to enjoy our cherished liberties, we must be strong enough to defend them successfully. More than that, we must be so strong that no nation, and no army, however well equipped, will dare to risk an attack upon us.

Make no mistake, we must prepare on a scale that up to recent weeks would have seemed fantastic. American airplanes have brought Europe within less than a day from our shores. It subtracts nothing from the honor of American manufacturers, American transport organizations, and American flyers to remember that other nations are also capable of building magnificent ships, and producing daring and skillful pilots.

I am no alarmist. I do not believe the United States is in imminent danger of invasion. I do not look under the bed before retiring at night to discover lurking spies or the camouflaged guards of a "fifth column." You, too, are not afraid. But you are sane and sensible. You know, as I know, that now more than in a long period of history, national weakness invites attack.

So I say with deep regret that the energies, the inventiveness, the treasure, the human energy that we should prefer, that you would prefer, to direct toward the enrichment of the lives of the average man and woman, must for the present be turned toward preparing ourselves to repel any possible invader. We want to be friends with all mankind. We plan to invade no nation. We covet nothing that belongs to another people; and we don't want to interfere with them in the exercise of their rights and the enjoyment of their liberties.

We tolerate differences of opinion. We desire to settle peacefully, justly, actual conflicts of interest. We know that such conflicts are inevitable. But I repeat, we do not intend to be made the victim of any invader. We intend to keep the United States safe and we do not propose to let any warlike power obtain a new base on American territory that might be used in the future to endanger the peace or safety of the people of this Nation.

We have the resources, we have the skill, we have the will to keep America safe for Americans and, unless I misread the minds of my fellow citizens, that is exactly what we are going to do.

I wish that events had permitted you, and me, as one of your speakers, to concentrate our thoughts on the achievements and the problems of civil aeronautics. The exhibits we have seen show how dramatically splendid are those achievements. You, whose lives are immersed in the business of bringing these miracles to pass, know well enough how intricate and how baffling are the problems.

I congratulate you on what you have accomplished, and I hope that destiny will permit us to proceed along the highroads of peace to even more glorious success.

"Fifth Column" and Civil Liberties

EXTENSION OF REMARKS

OF

HON. WILLIAM H. SMATHERS

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Tuesday, June 4 (legislative day of Tuesday, May 28), 1940

ADDRESS BY HON. LEWIS B. SCHWELLENBACH, OF WASHINGTON

Mr. SMATHERS. Mr. President, on June 1 the distinguished Senator from Washington [Mr. SCHWELLENBACH], who, I regret to say, is shortly to leave the Senate to assume judicial duties, delivered a noteworthy address before the forty-second annual meeting of the New Jersey State Bar Association at Atlantic City, N. J. The subject of the address was most timely, "Fifth Column" and Civil Liberties. The address is well worthy of perpetuation in the CONGRESSIONAL RECORD, and I ask unanimous consent that it be printed in the Appendix.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I appreciated the invitation to address this meeting for two reasons: First, because I practiced law a good many years myself and enjoyed the opportunity of meeting with lawyers. I hope that in the new position which I am soon to occupy I will not acquire the habit of mind which will prevent me from enjoying the companionship of lawyers. Second, I want to discuss a problem in which it seems to me lawyers as individuals are best fitted to understand and exercise influence in solving it, that because of their training and because of the position they occupy in their respective communities.

During the last few weeks a new phrase has attracted the attention of the entire world. I don't know just who coined it. I do know that I always am inclined to a certain element of alarm when an effort is made to cover a wide field by a short phrase. No problem is so simple that it can be stated in a few words. The term "fifth column" is widely accepted by millions of people who a short few weeks ago didn't know that armies marched in columns of four. Phrase-making is not the part of statesmanship. It ofttimes involves dangers more fundamental than those attempted to be inveighed against by the use of phrases. It is of supreme importance when we in America use the term "fifth column" we limit it to those activities against which we can safely protect ourselves and that by protecting ourselves against "fifth column" activities we do not destroy the very principles of government against which "fifth column" activities are directed.

We are about to spend several billion dollars for the defense of this hemisphere. We should understand the reasons behind such expenditures. First, very properly, we must defend our sovereignty and the sovereignty of other nations which for 120 years we have pledged ourselves to defend. Second, we must defend our property against seizure or destruction. Third, and most important, we must defend the philosophy of government which we acquired and have maintained at the expense of untold sacrifice.

It is of supreme importance that, during the process of defense of the first two, we do not ourselves destroy the third. It is about this problem I wish to speak tonight.

First, let me make it clear that I am in hearty accord with every legitimate effort to curb what are now popularly known as "fifth column" activities within the United States. The eyes of the people of every nation must be opened by the results of treachery and indifference in Norway, Holland, and Belgium. No one can deny the presence here of many who would just as willingly cooperate with an invading foe as would similarly minded people in these countries. No one can deny the activities of those who have taken their orders from Communist Russia and Nazi Germany. No one can deny that there are in this country men who have acquired the following of a large number of our people who are actuated solely by the hope that by an overthrow of our system they might land a position of dictatorial power. The question is not whether we should deal with them but how we should deal with them.

When in these remarks I stress the necessity for maintenance of democratic methods I do not mean to underemphasize the necessity for protection in the proper way against those who would undermine and destroy our institutions of government. However, during the last 3 weeks three alarming manifestations of hysteria have become evident. First, we have read of the organization in various parts of the country of vigilante groups self-appointed and self-constituted, which would assume the responsibility of dealing with the problem locally. Second, we have read of mayors and even Governors who have assumed for themselves extra-legal authority to deal with the problem. Third, we have seen in the Congress a flood of bills which would single out the groups of aliens in this country and deprive them of any of the privileges or the rights guaranteed by the Constitution.

I need not argue with you concerning the impropriety or the danger involved in the first two of these movements. Unauthorized law is merely mob law. Justice never stems from it.

The discussion of the third group is more difficult. Each one of the bills now before the Congress contains some element of merit. The danger lies not so much in the particulars of any bill as in the fact that each is the part of a whole through which hatred and fear may be injected into the minds of the American people against a group which lives within our midst.

Hate and fear. It is through these two emotions that dictators gain power. Place in the hands of an ambitious leader the means of instilling these in the minds of a people and you take the first step toward bondage. In Germany, it was hatred for and fear of the Jews that made Hitler strong. In Russia, it was hatred for and fear of the church which led to Stalin's ruthlessness. It is always so. We in America want no dictator. We want none of Hitlerism nor Stalinism. That is why we must resist any effort to create hatred for or fear of any class or group here. I don't care what may be their race or religion or social or economic status. Once we set apart any group as our common enemy to be hated or feared we endanger the rights and liberties of every citizen in the land.

I hold no brief for aliens. Certainly, they must not be granted favors over American citizens. But the danger lies in singling them out as the objects of legislative disfavor. Whether we like it or not, we are all the descendants of aliens. No one with good sense, no one with true devotion to American ideals, can justify whipping up popular sentiment against them, just because they don't have the right to vote.

Maybe you say: After all, they are only aliens, why should we Americans worry about them? If that is your attitude, I want Abraham Lincoln to answer you. Let me quote from what he once said: "Familiarize yourselves with the chains of bondage and you prepare your own limbs to wear them. Accustomed to trample on the rights of others, you have lost the genius of your own independence."

My appeal is not on behalf of the alien—it is on our own behalf. We don't dare permit these emotions to be kindled in our midst. The fate of any individual alien who might be injured by such

legislation is not important as compared with the fate of our own people, who will ultimately be injured thereby.

We in America inherit a treasure. That treasure is not in gold or land or other resources. It is the treasure of liberty. The right to be free, the right to think and to speak, and to print, and to worship—these are our inheritances. He who strikes at them strikes at our democracy itself. He who would restrict and limit the rights of any within our shores endangers the right of all within our shores. He who would ask us to hate and fear our neighbors, just because they are not citizens, asks us to light a fire which might well consume us all. He may wrap around himself the cloak of patriotism. He may attempt to charm with impossible promises, but he cannot deceive those who truly understand American democracy, because the hate and fear he teaches is foreign to it.

Fortunately, we in America retain that spirit which prizes liberty and also have in our hands the tools with which we may make that spirit effective. The tools of our democracy are contained in the first 10 amendments to the Constitution. They are known as the Bill of Rights. Any workman called upon to do a job, whether he is digging a ditch or building a skyscraper, knows that he must have his tools and have them in good shape.

It must not be forgotten that the very nature of these tools of democracy is such that they cannot be misused, exploited, or even neglected for long. They cannot be permitted even intermittently to lie dormant. Their nature is such that neglect and nonuse causes them to atrophy and die. Untiring alertness is the price which must be paid for their preservation.

We live today at a time when the need for this untiring alertness is greater than at any previous period in our Nation's history, this for the reason that right now three factors have merged:

1. For a full decade we have undergone a condition of depth-reaching depression. This could not have helped but to have weakened the resistance of our people. False doctrines of government acquire much more attractive color to a depressed than to a prosperous people.

2. The last two decades have seen the acceptance by the peoples of many nations of political doctrines which are the direct antithesis of those in which we believe.

3. At the moment most of the powerful nations of the world either are at war or on the verge of war. This results in a situation in which all of the nations participating feel it essential that every possible effort be made by them to influence the attitude of our people toward them and their enemies.

The concurring of these three factors presents to us the greatest danger, so far as our civil liberties are concerned, that this Nation has ever seen. Our Government and our people must necessarily afford protection against improper activities conducted from outside sources. We cannot afford to permit our actions to be controlled directly or indirectly by those who represent governments other than our own. We must, however, take care that in our desire to defend against improper outside activities we do not run the risk of destroying the civil liberties of our people and by so doing destroy our very democracy itself.

Each one of us looks upon himself as a patriotic American citizen interested only in the future welfare of our Nation and our Government. We are inclined to look upon those of whose theories we disapprove as being enemies of our Government and its future welfare. What is hard for you and me to understand is that if we prevent them from stating their point of view we at the same time deprive ourselves of the protection of the tools of democracy upon which we rely for the protection of the doctrines we espouse.

No objective in mankind's progress has been more difficult of achievement or of retention than political freedom. The common man has always desired political freedom for himself. He has, however, been slow to remember that his own freedom ultimately depends upon the equal freedom of all, even those whose views of government he may, upon occasion, dislike and even profoundly detest. It was only after centuries of struggle that the common man realized that political democracy was possible only if the rights of all men, without regard to race or religion, to express their political opinions freely and publicly were scrupulously safeguarded.

We must have an atmosphere of free expression if we are to have the benefit of fearless political discussion. This is the surest guaranty of orderly change and the surest protection against the forces of disorder. Nothing is so dangerous as the belief that any part of our political society should be beyond criticism. No one generation's judgment as to the essentials of good government can be unerring.

We must scrupulously maintain freedom of discussion if we are to develop our responsibilities as a people by choosing rationally the path we wish to follow. That is why freedom of thought and freedom of speech, with the resulting duty of making up our minds honestly and courageously, is at the very heart of the faith in democracy.

This faith in freedom of expression requires constant devotion, perhaps more so today than ever before in modern times. All about us, and all too close at hand, we see the forces of intolerance at work—forces intolerant of democracy, of science and even of religion. We have seen them in all too many shapes and forms. They preach a doctrine which is the opposite of that spirit of tolerance which is so essential to the perpetuation of our institution—democracy. Fear, hatred, distrust, and bigotry—these are the tenets of their faith.

We must realize the grave danger to civilization that lurks behind their forces. They must be dealt with resolutely if the freedom and dignity of the common man is to be preserved.

That resolute determination must carry with it an understanding of three basic principles of democratic machinery:

1. It must give to every citizen equality of opportunity to participate in government which is free from coercion or fear on the one side and free from impossible promises of reward upon the other.

2. The minority in a democratic community must recognize the right of the majority to govern. At the same time, the majority must insure to the minority the same degree of justice which it demands for itself. Failing in this obligation, the majority becomes merely a mob. When the majority becomes a mob, democracy fades out.

3. A democratitc government must be a government of law. A civilized democratic community demands that all classes within it respect its law. If respect for law is to be maintained, the law must reflect the community sense of justice and not the demands of any class or group. If the law reflects the community sense of justice, no class or group may defy or set itself above or beyond the law without bringing upon itself the just resentment of the whole community. A civilized democracy demands patience and self-restraint from all its citizens.

The very heart of our Constitution is the Bill of Rights. The rest of the document provides the framework of our governmental structure. The first 10 amendments provide the lifeblood that keeps that structure alive. Without freedom of speech, of religion, and of press, and the other guaranties of these amendments, our democracy would be but a sham and a fraud. If those rights are lost, everything in American democracy is lost.

There need be no compromise with the challenge of "fifth columnism." Our defense against it must be vigorous and effective. However, the machinery of government established within the framework of our Constitution furnishes the necessary implements with which to conduct this campaign. Let us not stray away from constitutional processes even to meet this serious challenge.

Rural Electrification

EXTENSION OF REMARKS

OF

HON. KENNETH McKELLAR

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Tuesday, June 4 (legislative day of Tuesday, May 28), 1940

RADIO ADDRESS BY HON. HARRY SLATTERY

Mr. McKELLAR. Mr. President, in a radio talk last night in the Washington Star National Radio Forum, Rural Electrification Administrator Harry Slattery declared that "since the inception of the R. E. A. program, the number of farms served with high-line electric power has increased by 150 percent."

Mr. Slattery gave major credit for the increase to the "new attitudes and new principles" of cooperation. R. E. A. has loaned $270,000,000, during the 5 years of its existence, to provide electrification facilities for 850,000 farm families and other rural users. Mr. Slattery states:

More than 600 R. E. A. financed rural-electric systems are now in operation. These systems are serving over half a million consumer members and new members are being added every day. Nearly a hundred other systems are being speeded to completion and each tomorrow brings to my desk reports of construction completed, lines energized, the juice turned on. These additional systems will serve half again as many farm families and other rural users. Awaiting the momentary allotment of funds for construction are plans for 75,000 miles of power line destined to bring service to many thousands more. Moneys already allotted will ultimately bring electric service to 4,000,000 rural people. Farmers in 45 of the 48 States have enlisted R. E. A. cooperation.

Benefits from the R. E. A. program are not confined to rural people, Mr. Slattery declared, but accrue to many parts of our urban commercial and social structure.

Mr. President, the address is most interesting and instructive, and I ask unanimous consent that it may be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

"The lights are going out all over Europe. The Rural Electrification Administration is helping to turn them on all over rural America."

They were striking words, spoken to me from the heart of a man high in the esteem of the American people and high in the ranks of American jurisprudence as I sat with him on a recent evening.

Those words stuck in my heart. And if a phrase can embrace all the challenge and significance of an idea, that phrase is today's inspiration for the rural-electrification program: The lights are going out all over Europe; R. E. A., as we call the Rural Electrification Administration, is helping to turn them on all over rural America. And as I speak to you tonight there are thousands of farm families along new R. E. A.-financed rural power lines from coast to coast who listen by the light, and hear by the magic of radio, that electricity has brought at long last to their farms. They know much of the story I shall tell, and I trust they hear me with approval. To all of you, I report the progress of a development for the people of rural America that is closely linked with the lives and livelihoods of every one of us.

America needs light today—light for the mind and light for the eyes. With that thought in mind I want to acknowledge with deep sincerity my gratitude for the opportunity to speak to you tonight—my gratitude to the blue network of the N. B. C. and to the Washington Evening Star. For these Star forum programs are designed to bring light to our minds. And this brief discussion of the R. E. A.'s endeavor to help bring light to the eyes of rural America will, I think, stand up to that tradition.

For more than 30 years I have been intimately associated with the conservation and electric-power program in America. Twenty-five years ago I watched the beginnings of the movement to bring the benefits of electricity to the farms of the country. I heard the late Senator Robert M. La Follette, sterling leader and statesman, repeat often the slogan which he carried on the masthead of his weekly paper, "Where there is no vision, the people perish." He was one of the first to voice the hope of bringing the blessings of electricity to the families of rural America. He had the vision.

Twenty-eight years ago I saw the great strides already achieved in rural electrification in Ontario, Canada, and on my return from that trip I saw and talked with the great Steinmetz, wizard of electricity, at work in his General Electric Co. laboratories in Schenectady. He spoke even then of his belief in a network of transmission lines that would gird this country border to border, and reach into every hamlet and every home. He had the vision.

I watched Gifford Pinchot, when first Governor of Pennsylvania, endeavor to awaken the Keystone State to the need for rural electrification. He had the vision.

In his efforts to decentralize industrial activity, Justice Louis D. Brandeis early saw the need and potentialities of electricity in small villages, towns, and on the farm. He also had the vision—and still has, I assure you.

During the administration of Theodore Roosevelt, the grandfather of the present Secretary of Agriculture, affectionately known to thousands of you in the Middle West as "Uncle Henry" Wallace, urged the cooperative electrification of our rural areas.

He had the vision then. His grandson, Henry A. Wallace, the present Secretary of Agriculture, has the vision now as indicated by his achievements for the farmer's welfare, and for rural electrification.

President Roosevelt has told how, while he was visiting Warm Springs some years ago, an idea crystallized into a plan of action. The idea which he had long cherished was: "Electricity is a necessity of modern life and ought to be found in every village, every home, every farm, in every part of the United States." The plan of action was the creation of the Rural Electrification Administration. All of us know he had the vision.

Today the work of the Rural Electrification Administration has brought that vision of these men and many others to a reality * * * electricity on the farm is a fact for hundreds of thousands of our people. For many more, it is on the march.

I wish it were somehow possible for you out there on the loudspeaker end of this discussion to shoot questions at me as I go along—then we'd have a real forum—but I think I can anticipate many of your possible queries.

What is this rural electrification?

Why is the Federal Government stimulating the development of electric service for unserved farm families, anyway?

Who benefits; only the farmer?

What does it cost, and who's going to pay the bill?

How is the program carried on? And—

What has been accomplished?

Let's turn the pages of the book of rural electrification on the march and sift the answers. The facts are simple and plain.

Rural electrification means, obviously enough, the taking of electric service to unserved rural areas of the Nation. But it means more than that, too. It means the extension of opportunity for farm families to live on a plane equal to that enjoyed by the family in the city. It means bringing to the farmer new tools for making a better living—doing a better job of working a livelihood from the soil. It means better sanitation and a stepped-up standard of farm health. It means increased living comfort for all the farm family—not the comfort that softens a man's muscles, but the comfort that promotes leisure and an opportunity to plan, to think, to sharpen the mind through intelligent use of leisure.

For the boy and girl on the farm, rural electrification means a renewed interest in seeking his or her place in life, in the country—not in the harried confines of a city shop, or in the too-long line that still leads to a dismal employment office.

These things are the real essence of rural electrification, and the Rural Electrification Administration and its program are designed to speed the sound development of these basic improvements for the agricultural arm of the Nation.

As late as 1925 the established private power companies had extended electric service to only about 200,000 farms. At that time there were nearly six and a half million farms in America. From 1925 until 1935 service was extended to about half a million more, but the unplanned character of these rural extensions, ofter simply short fingers reaching out from the cities, merely skimmed the cream of potential rural consumers and left more than five and a half million farms unserved.

Nine farm families in every 10 did not have, and many of them had forsaken the idea of ever being able to get, electricity.

They needed it. And it was important to the Nation as a whole that they have it. I say it was important to the Nation, because the efficiency and convenience of life in the city had developed rapidly, largely as the result of electricity, while people who lived in the country still had to get along with old-fashioned, and for some farm work almost pioneer types of equipment. Socially and economically, country and city were thrown increasingly out of balance. In terms of effective living the agricultural arm of the Nation grew proportionately weaker as the urban arm became stronger.

No one needs an economist to explain that such a situation undermines the strength and the competence of our whole social and economic organism. And a situation that did not make good economic sense had to be remedied.

The Nation could not afford to have five and a half million farm families living in the era of the kerosene lamp while the rest of the Nation, the Nation in which they had to live and make a living, went speeding on, geared up for the age of electricity.

The Nation could not afford to have more than five and a half million farm families handicapped for want of the modern tools for better living and more effective production that had become such potent instruments for progress in the city home and factory.

It was evident that electricity could bring the farm family, insofar as electric service and its attendant advantages were concerned, into closer social and economic parity with the city family. And in 1935 the growing appreciation of these facts, coupled with the need for added stimulus to national and employment industry running in low gear, set the stage for the timely establishment of the Rural Electrification Administration.

Congress acted under the dynamic intellectual and practical leadership of such men as Senator GEORGE W. NORRIS, of Nebraska, Congressman SAM RAYBURN, of Texas, and Congressman JOHN ELLIOTT RANKIN, of Mississippi—provided the funds for actually building rural power lines. Construction took the place of conversation. And the rural electrification program was under way. R. E. A. started lending money; low-cost electric service started to spread, slowly but with growing vigor into unserved rural areas; and the money used to build the lines prompted new activity in a hundred trades and crafts.

First benefits of the new rural electrification went to the farm family. Electricity lit the farmer's evening—sped his completion of a dozen nightly chores. Electricity sprang to action for the farm woman in her kitchen * * * pumped the water for her many tasks and retired the awkward pail that had bent her back on countless trips to the pump. Farm youngsters turned to their school books with more enthusiasm and less eyestrain. Across the face of isolated countrysides thousands of folks thrilled to the magic of their new-found perfect farmhand—low-cost electricity at the snap of a switch.

And across the face of industrial America a new stimulus was felt as the demands of rural-line construction piled up new orders for wire and insulators and poles and hardware, piled up new demands for the services of workers in the mines, in transportation, and in electrical-equipment factories.

The new rural electrification built new outlooks and new incentives and new tools for the farm family while it bolstered employment and the pay roll of the Nation.

Who benefits from the far-reaching program to take low-cost electricity to the Nation's farmsteads? The farm families, yes; but you and I, as well. For each fundamental improvement in the lot of one branch of our national family spreads its benefits through the whole economic and social fabric of America.

During the first 5 years of operation, concluded last month, R. E. A. lent $270,000,000 for the construction of rural power lines to serve 850,000 farm families and other rural users. A relatively small amount of this money has been made available for financing farm wiring and plumbing and for the construction of generating plants in places and in situations where electricity could not be purchased wholesale at rates which would permit the rural electric systems to provide low-cost service to their consumer members and pay out as the law requires.

Two hundred and seventy million dollars is a tremendous sum of money, but it has been lent strictly as an investment. The law under which the Rural Electrification Administration operates requires that all this money be returned to the Treasury, with interest, within 20 to 25 years.

The American people, through their Government, have made this investment in the people and the prospects of America's most basic

industry—agriculture. It is a sound investment. The cash will be repaid by the farm families who use electric service. And these families will also pay the small interest charge on that cash. But the return of actual value to you and me as taxpayers will exceed a hundredfold the money returned to the Treasury. No economist can compute the value to the Nation of the new vitality, the new standard of health and of living, the new impetus to better farm production or the whole new outlook on life in a democratic United States that is the fundamental product of the rural electrification program.

Money is the lifeblood and action is the creed of this dynamic effort to speed the electrification of rural America. But the job could not have been done as it has been done without the enlistment of new attitudes and new principles of management.

The new attitudes and the new principles are those of cooperation.

Cooperation is the idea and the method that has made possible most of the rural electrification stimulated by the R. E. A.

And cooperative principles of management—principles designed solely for the purpose of providing service, unhampered by the demand for profits—these principles are the operating device for building and maintaining the new rural electric systems.

Nearly 90 percent of all R. E. A. loans have been made to cooperative organizations of progressive farm people. Their functioning is simple, democratic, and well adapted, both to the temper and the interests of the farmer and to the job of providing electric service in rural areas.

This is how the cooperative grows and works in the field of rural electrification.

A group of farmers who want service meet and organize as a corporation. They apply to R. E. A. for a loan. The amount of the loan depends upon the amount of line that must be built, the engineering and related problems that must be met in building comprehensive service for the area to be served, and the number of farms that will use the service. After a thorough investigation of the economic, agricultural, and engineering factors that will affect the financial and service success of the cooperative—and providing, of course, that the investigation proves the feasibility of the intended construction, R. E. A. grants the loan.

All farmers who are to take service join the cooperative. Each pays a nominal membership fee into the treasury of the cooperative and this money is used to offset the expenses of organization and initial development. Each member has an equal vote and voice in the management of the cooperative, and this, I submit, is a pattern for true democracy in action.

The cooperative employs a manager and other competent personnel to handle specialized tasks of operation and management. These employees, responsible to a board of directors elected by and from the membership, run the business as any other sound business is run—always with this exception, however; that their responsibility is to the members, the folks whom they serve, rather than to stockholders. Their entire effort is directed toward the maintenance and improvement of service * * * a service job, undiluted by demand for profit.

The farmer-member's responsibility to his cooperative is simple. His sole obligation is to pay his bills for current, to use his electricity wisely and abundantly for the improvement of his home and his work, thus contributing to the financial soundness of his cooperative, and to take an active part in the affairs of his system to the end that it serve the whole farm community completely and as fully as possible.

Throughout all stages of the cooperative's organization and development the staff of the Rural Electrification Administration works with the staff and membership of the cooperative—smoothing its way in matters of law, assisting in the engineering and maintenance of the lines, helping the farm families to initiate the most practical and profit-producing applications of electricity.

That in brief is the way these rural electric cooperatives function.

All these answers to the questions which I posed myself point up the final question which always comes to the alert mind; "so what?" What does all this mean in terms of accomplishment—accomplishment we can weigh and appraise? Does it all add up to a tangible result that justifies the expenditure of time and money and tremendous effort? A practical America wants results. These are the results to date of the R. E. A. program to electrify rural America.

More than 600 R. E. A.-financed rural electric systems are now in operation. These systems are serving over half a million consumer-members and new members are being added every day. Nearly a hundred other systems are being speeded to completion and each tomorrow brings to my desk reports of construction completed, lines energized, the juice turned on. These additional systems will serve half again as many farm families and other rural users. Awaiting the momentary allotment of funds for construction are plans for 75,000 miles of power line destined to bring service to many thousands more. Moneys already allotted will ultimately bring electric service to 4,000,000 rural people.

Farmers in 45 of the 48 States have enlisted R. E. A. cooperation. Only in three States no R. E. A. power systems have been set up. There, in some instances, the farmers have been prevented in various ways from building and operating their own electric distribution systems. But I hope we will eventually bring R. E. A. to these States.

This movement for rural electrification owes no little to the firm support of the agriculture organizations like the Farm Bureau, the National Grange, the Farmers' Union, and others.

I want to take this occasion to say, too, that the success of the R. E. A. program is due in a large part to the devoted day in and day out efforts of the men and women of the R. E. A. staff, both in Washington and in the field.

Since the inception of the R. E. A. program the number of farms served with high-line electric power has increased by 150 percent. In 1935, 1 farm in 10 had central station service; today 1 farm family in 4 enjoys the new opportunity and incentive for more effective life and work on the farm that comes with the magic of electricity at the click of a switch.

These have been the physical, the tangible results of the R. E. A. program.

Less tangible, but no less real and important, are the human results.

Written in the eyes of thousands upon thousands of farm women is a joy and sense of new freedom from drudgeries inherited from the pioneers. The electric refrigerator; running water, pumped with electricity, a bright light over her sink; an electric bulb in her hen house, prompting extra egg income from her hens—these things are not mere gadgets for improved living to the farm woman—these things are symbols of a dream come true.

Better farm management, made possible by electric equipment, reflects the electrified farmer's new sense of opportunity to make his farming a more profitable and a more satisfying way of life.

Farm youngsters have a yen to stick to the old place, because the old place is a better place—as good as the city cousin's—when electricity turns on the lights.

Only they who toil in the highlands and along the river bottoms, they who work the soil to fill the larder of our Nation—they know best how great are these results. To them the new rural power lines are symbols of their modern pioneering, a new source of power for their modern progress.

In a letter to me commemorating the fifth anniversary of R. E. A., President Roosevelt acknowledged the significance of these human results in these words "* * * even in a complex industrial economy such as ours the roots of national well-being strike deeply into the soil. But particularly in times like these, all who strive to bring to the life of the American farmer new comfort, new power, and new dignity may take special pride in their task."

We do take special pride in our task. But it is the pride one feels as he accepts a challenge, such a challenge as was implied by Secretary of Agriculture Henry A. Wallace, when he said to our R. E. A. staff recently, "Electricity in agriculture is going to be enormously more important than any of us now appreciate."

We are challenged by many things today. Many are grim but many others are promising. America has never looked down, and she never shall, so long as her men and women, free and independent in thought and action, and can join together of their own will to accomplish common ends for the common good.

Our problems as a nation are grave, but no chaos in the tides of human affairs can match the spirit of our confidence in the future of America.

And I say to you, every one, that the electrification of rural America by and for the farmers themselves is a vital, democratic action that is proof, positive and triumphant, that our American way of life is virile, and equal to every challenge of the future.

Free Speech Under National Labor Relations Act

EXTENSION OF REMARKS

OF

HON. ROBERT F. WAGNER

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Tuesday, June 4 (legislative day of Tuesday, May 28), 1940

STATEMENT BY THE BOARD OF DIRECTORS OF THE AMERICAN CIVIL LIBERTIES UNION

Mr. WAGNER. Mr. President, I ask unanimous consent to have inserted in the Appendix a very important statement by the board of directors of the American Civil Liberties Union, issued May 21, 1940, in opposition to the pending amendment to the National Labor Relations Act purporting to guarantee free speech. This statement is of special significance because of the widespread misunderstanding of the position heretofore taken by the American Civil Liberties Union on this issue.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

AMERICAN CIVIL LIBERTIES UNION,
New York City, May 21, 1940.

A STATEMENT BY THE BOARD OF DIRECTORS CONCERNING A BILL IN CONGRESS TO PROTECT FREEDOM OF SPEECH FOR EMPLOYERS UNDER THE N. L. R. A.

Pending before the House of Representatives at Washington is a proposed amendment to the National Labor Relations Act originating in the so-called Smith committee which proposed to protect freedom of speech for employers. The amendment would exclude from the prohibitions of the act "any expressions of opinion with respect to any matter which may be of interest to employers or the general public, provided that such expressions of opinion are not accompanied by acts of coercion, intimidation, discrimination, or threats thereof."

At first sight it would be assumed that the American Civil Liberties Union would support such an amendment, particularly in view of the exceptions it has taken to the formulation of some orders of the National Labor Relations Board which could be interpreted as interfering with employers' expression of opinion even when not related to acts of coercion against employees. But the amendment would not merely have the effect its language suggests at first sight.

To provide that expressions of opinion shall be prohibited only when accompanied by acts of coercion ignores situations where coercion may precede or follow the expression of opinion and thus be directly associated with it. In the very difficult area of distinguishing between freedom of expression on the one hand and coercion on the other, the amendment would not cover the cases where in fact expressions of opinion are a part of a course of coercion.

Insofar as the amendment merely writes into the law the constitutional guaranty of free speech contained in the first amendment, it is wholly unnecessary. But writing it into the law in such specific language might well be interpreted by the courts as going beyond the constitutional guaranty and giving employers' speech more protection than the speech of others.

The Civil Liberties Union believes that employers' rights of free speech are adequately protected by the constitutional guaranty and need no further support in law. Nothing in the National Labor Relations Act curtails an employer's right of free speech.

It should be emphasized that despite all the controversy there has as yet been no actual interference with employers' rights of free speech by the National Labor Relations Board. There have been several orders, notably in the Ford cases, in which the Board did not, in our judgment, clearly enough define the distinction between mere opinion and coercion. But in the Ford and other cases the record of coercion was clear. The orders based upon the record, however, suggest the possibility that the distribution of antiunion literature might be considered coercive regardless of the circumstances of the distribution. The Board has not attempted to enforce any such order against an employer who had ceased a course of coercion.

The Civil Liberties Union is opposed to the amendment as unnecessary and as possibly justifying interference with the rights of employees under the guise of opinions not actually accompanied by acts of coercion, but inseparable from them.

The union is opposed not only to this amendment but to any such amendment to the National Labor Relations Act until its administration has made much clearer any abuses to be corrected. The act stands as the greatest single advance yet made in guaranteeing to workers their rights to form unions and to select representatives for purposes of collective bargaining without interference by employers. It cannot be too strongly emphasized that it is in this field of industrial conflict in the light of the traditional and violent opposition of employers to trade unions that the major issues of civil liberty have arisen. The act in its few years of operation has vastly reduced the resort to violence and coercion, with consequent deprivation of civil rights, and greatly increased the free exercise of labor's rights to organize. Practically all complaints as to the administration of the act can be met by regulations of the Board.

Broadcast of Speech of Communist Nominee for President

EXTENSION OF REMARKS
OF
HON. JAMES M. MEAD
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Tuesday, June 4 (legislative day of Tuesday, May 28), 1940

STATEMENT OF THE COLUMBIA BROADCASTING SYSTEM

Mr. MEAD. Mr. President, there has been considerable comment and controversy the past several days regarding a network broadcast of the Columbia Broadcasting System which carried the voice of the nominee for the office of President of the United States of the Communist Party.

In order to clarify its viewpoint and to explain the reasons why this broadcast took place, the Columbia Broadcasting System issued a statement on June 1, a copy of which I have before me and which I desire to be printed in the RECORD.

In addition to this explanation, I wish to have appear in the RECORD an Associated Press dispatch dated May 31 which discusses the controversy.

There being no objection, the statement and dispatch were ordered to be printed in the RECORD as follows:

Inquiries have been received as to why the Columbia Broadcasting System could not bar Earl Browder from the air under the last sentence of section 315 of the Communications Act, which reads:

"No obligation is hereby imposed upon any licensee to allow the use of its station by any such candidate."

The fore part of this section reads:

"If any licensee shall permit any person who is a legally qualified candidate for any pubic office to use a broadcasting station, he shall afford equal opportunities to all other such candidates for that office in the use of such broadcasting station, and the Commission shall make rules and regulations to carry this provision into effect: *Provided*, That such licensee shall have no power of censorship over the material broadcast under the provisions of this section."

The complete section permits the licensee to decide whether it will carry speeches by all the Presidential candidates or none of them. Since the Columbia Broadcasting System proposes as usual to carry speeches by the Democratic and Republican nominees and has already carried the speeches of two other nominees for the presidency, namely, that of Norman Thomas, for the Socialist Party on April 7 and that of John W. Aiken, nominee of the Socialist Labor Party, on April 28, Columbia has already begun to function in this campaign as it and practically all broadcasters always have done in this and previous campaigns, under the first part of the section. Consequently, Columbia considers itself obligated under that part of section 315 which says that if any licensee shall permit any person who is a legally qualified candidate for any public office to broadcast, it shall afford equal opportunity to all other such candidates for that office. It would be against public policy for a Nation-wide network such as Columbia, in its efforts to render public service, not to carry speeches by any candidates for the presidency, especially of the major parties.

The law is simple and clear and there is no way in good faith to escape the meaning of its provisions. Either a network or radio station offers its facilities to all candidates, or it cannot, without violating the law, offer its facilities to any candidate for any given office. Thus it may be seen that, if the law is followed in its obvious mandate, barring of the candidate for President of the Socialist Party, the Socialist Labor Party, the Prohibition Party (scheduled for June 19), or the Communist Party would necessitate—unless the law be violated—barring candidates of the major parties.

"RED" CONVENTION AIR PROGRAM IS RAPPED BY C. B. S.—TWO STATIONS DROP BROADCAST, BUT SYSTEM MUST ACCEPT IT BECAUSE OF LAW

NEW YORK, May 31.—Protesting an announced broadcast Sunday of the American Communist Party's convention proceedings, officials of a radio chain and a former Congressman today demanded that the Government ban Communists from the Nation's radio lanes.

In a public statement the Columbia Broadcasting System urged revision of the communications law so that no broadcaster is compelled to give time to the candidates of any political party if it is proved to be subservient to a foreign power.

TWO STATIONS DROP IT

C. B. S. is one of three national chains scheduling the Sunday broadcast of a speech by Earl Browder, general secretary of the Communist Party who is expected to be nominated for the Presidency.

Under present radio laws, it said, radio companies were forced to treat all candidates for public office alike.

Station WCKY, in Cincinnati, however, decided to drop out of C. B. S. network for the 15 minutes allotted to the Communist program, substituting a program of patriotic music. WCAU, at Philadelphia, also refused to broadcast the speech.

L. B. Wilson, president of WCKY, stated, "This is the time to tighten our national defenses everywhere," and added, "We are certain that it is not in the public interest to broadcast pro-Nazi, pro-Communist speeches at this time."

At the same time former Democratic Representative John J. O'Connor, of New York, threatened to seek an injunction banning the Browder broadcast on the grounds that the Communist Party was not a legal or recognized political party in New York.

COMMISSION NOT TO ACT

He had earlier appealed to the Federal Communications Commission to halt the broadcasts. Having received no reply after several hours, O'Connor announced his injunction intentions were averted because he could obtain no hearing before Monday.

F. C. C. officials said later that O'Connor would be advised that the Commission "has no authority to take the action you request."

Meanwhile, the Communist convention, in its second day, received reports that the party in this country had contributed $18,000 in the last 2 years, including $5,000 in the last 6 months, to the Communist Party in Germany to aid "in its fight against the Hitler regime."

Total Preparedness

EXTENSION OF REMARKS

OF

HON. SHERMAN MINTON

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Tuesday, June 4 (legislative day of Tuesday, May 28), 1940

MEMORIAL DAY ADDRESS BY HON. PAUL V. McNUTT

Mr. MINTON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the Memorial Day address delivered by Hon. Paul V. McNutt at Arlington Cemetery.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I. INTRODUCTION

The Nation pauses.

And once more honors its hero dead.

Memories of noble lives and glorious death cannot lessen the poignant grief for comrades who rest in silence here. Nor deaden the pain with which we recall the handclasp of past years.

"There isn't a song on the drivers' lips
As the caissons roll today.
There isn't the jest of the roaring ranks
As the columns swing their way.
* * * * *
"The blue of the fleet that swept the seas,
The brown of the wild Argonne,
The men of musket and Mauser days,
Come, shoulder to shoulder, on.

"The caissons roll and the columns swing
In the old 'One, Two, Three, Four,'
And the ranks close in where their files are blank,
The men who will march no more."

They march no more!

But the service and sacrifice of these sleeping dead have left with us a spiritual legacy which lives eternally in our hearts.

Ours is the responsibility to prove worthy of this heritage, to complete the task of those whose work is done. To protect our country and our democracy today as they protected it in the past.

To meet, with the same courage and devotion the present perils to the freedom which they won and kept for us intact.

Let us neglect no means of nourishing our ideals of humanity. One way is through the work of the Red Cross. May we all help in the fullest measure, in the names of those loved ones here who no longer need its merciful ministrations.

II. AWAKENED AMERICA

The world today is racked and torn between two mighty forces—a terrifying clash between two ideologies.

In one of these ideologies, America can find the beliefs and traditions by which this Nation, since its birth has lived. In the other, everything which America has abhorred.

In the one is the ideal of freedom, of democracy, of humanity. In the other are ruthlessness, brutality, and tyranny.

Upon the outcome of this world-shattering conflict hangs the hope of peace in our day.

There is no use pretending we have no stake in Europe's war. And there is no good to come from telling ourselves that whether the one side or the other conquers is none of our business. Every clear-thinking man and women in this Nation who is devoted to America and to the principle of popular government knows better.

Indifference to the outcome of this tragic struggle means indifference to the future of the United States of America. And the citizens of this country now recognize it. America has at last awakened.

We have lived in a dream world naively believing that the security of free nations would never be shaken.

But the roar of airplanes and the thunder of mechanized divisions, rolling through Belgium, Holland, and France, where once our own men stemmed the tide of aggression, have brought us face to face with harsh reality.

After 2,000 years of effort to establish the worth and dignity of the individual, we see the rights of mankind mercilessly swept away upon the surging flood of tyranny and oppression.

What of the centuries of laborious effort. The years of careful cultivation of democracy and freedom.

And what of the giants and heroes of civilization. The sacrificial lives of men whose only thought was to improve the world in which they lived. The lowly Nazarene giving to mankind a faith and a creed which was to prove the most enobling influence in all history. Washington, with dauntless courage, heartening his shoeless veterans at Valley Forge, to secure for America the blessings of liberty. The magnanimous Lincoln, giving his life to maintain the national unity which we now know to be our only hope of safety. Wilson striving tirelessly for an order of international brotherhood. The countless dead, whose memory we honor on this day. And those heroes of the laboratories, burning out their lives to abolish disease and suffering and to lighten the load of toil for human beings. All the selfless men of history, striving to establish on this earth a civilization which could make a life what the Almighty God intended it should be.

The ideals and work of all these heroic figures, now threatened with annihilation—men slipping back into the black depths of ignorance, passion, and barbarism—slipping back after thousands of years, into the jungle.

This is the future we face if injustice and oppression triumph in the world.

There are a few still among us who profess to believe that "regardless of which side wins this war, there is no reason * * * to prevent a continuation of peaceful relationships between America and the countries of Europe."

Such a viewpoint is based upon one or the other of two propositions, both of which have unfortunately been proved untrue.

It is not true that neutrality is any longer a guaranty of peace. We have seen one sovereign nation after another, faithfully and meticulously fulfilling its obligations as neutrals, attacked without warning, devastated, and laid waste. The time has come in world affairs in which a neutral nation is a nation which fails to protect its own interests until it is too late.

Neither is it any longer true that America's geographic isolation renders it secure against attack. For a century and a half America was safe between two mighty oceans. But that safety depended in large part upon control of the seas by a friendly naval power.

Both neutrality and isolation have become phrases capable of misleading a peace-loving people and exposing them to the destructive forces which have brought ruin and desolation to the most civilized peoples of the Old World.

Because neutrality and isolation insure no peace, it does not follow that America should go to war. It does mean, however, that we are in grave danger of having a war thrust upon us, and to avoid that unhappy event will require all the statesmanship, courage, and wisdom that a unified and determined America can summon.

III. VITAL DECISIONS SOON

Within the next few months, weeks, or, possibly, days, this Nation may be called upon to make decisions of far-reaching and vital importance to our future.

If the Japanese move toward the Dutch East Indies, we shall be confronted with the crucial problem whether we are to withdraw forever from the Orient, abandon our obligations to the Philippines, and give up our voice in the affairs of the Far East.

If the Allies lose in Europe and especially if Germany acquires all or a part of the English and French fleets, we shall be confronted with the immediate problem of occupying island bases in the North Atlantic and Carribean or tolerating German claims and probable occupation of these possessions as the legitimate spoils of war.

Whether these and a host of other equally grave issues may be averted by immediate decisions to take protective action is itself a momentous question.

If America can avoid a war by any action less than actual participation in hostilities, it is the part of wisdom to take such action.

If, by extending credits to the democracies, fighting with their backs to sea, defeat for their cause may be averted, the future welfare and safety of this country would justify such a course.

If, by following the precedent of our acquisition of the Virgin Islands, we can forestall attempts of unfriendly powers to obtain a foothold within striking distance of the Western Hemisphere, it is the legitimate exercise of our right to security to acquire those bases and fortify them for our own protection.

One thing is certain: The United States of America can never, under any circumstances, allow unchallenged an attempt to extend the political or military influence of potentially unfriendly powers to this hemisphere. The Monroe Doctrine must continue to be the core of our foreign policy. In the light of conditions as they are now unfolding in Europe and in the East, compromise with that historic doctrine is unthinkable.

IV. TOTAL PREPAREDNESS

We shall do well to remember that dictators wage total war. We have seen it in Poland, in Finland, in Norway, in Belgium, in Holland, and in France.

Total war is to bring to bear upon armies and civilians; upon women and children; upon helpless and defenseless cities; all the instruments of destruction which the genius of man can devise. It is to wage economic and ideological war as well as military and naval war. It is to undermine the political, social, and industrial structure of a nation with propaganda, sabotage, and "fifth column" trickery. It is ruthless and conscienceless, com-

plete, and unlimited. The world has been horrified and stunned by the effectiveness and efficiency of total war.

America must meet the threat of total war with total preparedness. We, too, can be efficient, effective, and complete. We, too, can mobilize the physical, economic, and human resources of a rich nation and a mighty people to meet every possible and every conceivable contingency.

There is no occasion for alarm or for hysteria. But there is every reason for this country to exert itself to the utmost of its ability to attain a state of total defense for a threat of total war.

What is the utmost of our ability? What is total defense?

We need not count the cost; for whatever it is, it will be cheap. It cost America $35,000,000,000 to take part in the last war. What would it be worth to avoid total war as it is waged today?

The limits of our ability are measured, not in dollars but in the labor of human beings, the capacity of our factories, the productivity of our farms and mines, and the brains, spirit, and patriotism of our people.

We have seen the tragic proof of the superior preparation of Germany over the democracies. There are no unemployed in Germany. The labor of political prisoners is commandeered, and old men, women, and children are conscripted to promote total war.

In America we now have 9,000,000 unemployed. So long as we have idle men and idle capital, idle factories and idle mills, we are not making total preparedness. We have seen how total war is directed at the weakest point. If our strength is sapped by unemployment, we can expect the enemy to take advantage of this weakness.

Men who have long been out of work are not effective citizens. If required to defend their country, they will not make effective soldiers. Men out of work lose their skills. They lose their health. And eventually they lose their spirit, their morale, and their patriotism. Men are not eager to seize the sword to protect a jobless way of life. Nor are they willing to die for a country in which democracy means a bread line and soup kitchen.

Men fight and die for the things they love, the things they believe in, and the things they prize above life itself.

That is why total preparedness requires that we make ourselves strong all the way through. It is not enough that we develop the shell of military and naval defense. Beneath it there must be the solid foundation of internal soundness.

This war is a war of machines. But behind the machines there must be the clear, healthy brain and the indomitable spirit of the men and women of the nation—the devoted, courageous citizens, dedicated to a lofty and noble ideal of life, ready and willing to make every sacrifice to maintain and defend it.

We must never for one moment forget that an essential and vital part of our defense of America must be the maintenance of the health, morale, and economic freedom of the citizens of this country in time of peace and in time of war. And the greater the threat of war, the more necessary it is that we continue the upbuilding of the economic and social life of our Nation.

Nothing short of this will afford America that total preparedness so necessary to avert total war.

V. WHAT ARE WE GOING TO DEFEND?

America, in its preparation for complete defense, must not lose sight of what it is we are going to defend.

Totalitarian States have an ideology. And it is this philosophy that puts in those mechanized divisions a motive power more vital than the oil and gasoline which is piped into Belgium and Holland and France. In those huge armored trucks and behind the machine guns in those thundering tanks are men with a gleam in their eyes. Behind the oil-stained visors of the flyers in the Stuka diving bombers are grim faces, but faces flashing with the Nazi vision of conquest.

These men know what they are fighting for. They have a philosophy—a consuming philosophy which they have read in books, which they have had hammered into them in a thousand ways until they believe it more than they believe anything else in the world. It is a philosophy of war and destruction, of the crushing of enemies, of the glorification of a race and a man, of the subjection of every nation and every people to the will of that glorified race and that glorified man. It is a philosophy of ruthlessness, brutality, force, and aggression, but it is a complete and total philosophy of life and of death, and it gives power and drive to those waves of green-grey troops and those cold, steel columns of machines.

The aggressor has the advantage.

And yet the answer for America is not to turn aggressor. We will not meet the enemy on their own terms. We will meet them on ours. We will get ready, physically and materially. We will build the greatest military and naval and aerial defenses the world has ever seen. We will not only equal our potential enemies in military strength. We will outdo them. We will show the world what a vigilant, alert, and free people can do when danger is recognized.

And, equally important, we will enrich our ideals and rededicate ourselves to the democratic way of life. More than ever before in our history, we must make democracy a living, burning force in the lives of our people.

And the way to do this—the way to strengthen our faith and to revitalize our philosophy—is to perfect the thing we have faith in, to build our democracy wider and deeper. To build up the things we are getting ready to defend so that all of us will realize how much worth defending they are and how great would be their loss.

Let us strive even harder for economic freedom for every man and family in this land. Let us insure a job for every worker. Let us make available an education for every boy and girl. Let us clear away our slums and show a world that is destroying houses with bombs how fine and strong we can build them for our citizens. While Europe is blowing up hospitals filled with wounded soldiers, let us construct hospitals all over our country to care for sick and unfortunate men and women. Let us retain freedom of speech and discussion while even the democracies of the Old World are giving up this priceless heritage.

Let us not make the mistake of neglecting the protection of our internal resources and the strengthening and upbuilding of our people while we are building for our national defense. Let us show ourselves ready to pay in money and labor and devotion to make use of all our powers for building our Nation strong in every part.

Let us make one gigantic, convincing demonstration of how a great nation, by loyalty, wisdom, and foresight can gain security with freedom rather than lose both in a futile attempt to exchange the one for the other. Let us be sure that we yield not one article of our faith to the ideology of dictators who may one day seek to thrust their way of life upon us by force of arms.

Let us match the driving force of vaulting ambition directed toward conquest and destruction with the spiritual impetus that is generated by a consuming passion for liberty and an indomitable will to defend the civilization upon which we have lavished such great effort. And for these sacrifices that we must make and for price that we must pay we shall have not only security from aggression from outside, but a new strength and security within, knowing that we stand together as brothers in the democratic ideal of life.

VI. CONCLUSION

As we once more stand with uncovered heads on this hallowed ground may the memory of those we honor remind us that the freedom which is ours was obtained through the noble sacrifices of heroic men.

May we recognize that the blessing which we are permitted to enjoy carry the inviolable duty and the obligation to preserve them untarnished and unsullied for those who are to follow.

Above all, may we realize fully that our liberties are primarily the byproduct of a heritage of glorious and transcendent ideals—the principles of righteousness and truth and justice to and for all men. And that so long and only so long as we are capable of cherishing and preserving these eternal values as a dominant and living force among our people are we worthy of the noble estate with which we have been endowed.

Give us strength, O Lord, and hear our prayer: "Thy Kingdom come, Thy will be done, on earth as it is in Heaven."

Conservation and Development of Our National Resources

EXTENSION OF REMARKS

OF

HON. JOHN H. BANKHEAD, 2D

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Tuesday, June 4 (legislative day of Tuesday, May 28), 1940

ADDRESS BY HON. JAMES P. POPE

Mr. BANKHEAD. Mr. President, I request unanimous consent to have printed in the Appendix of the RECORD a speech delivered by Hon. James P. Pope, director, Tennessee Valley Authority, before the New School for Social Research, New York City, on May 16, 1940, on the subject of Conservation and Development of Our National Resources.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

In the desert regions of our great West there is a tree called the giant yucca. Its outstretched branches give it a strange resemblance to a signpost; and legend has it that Brigham Young and his followers, after a long, distressing trek pursuing mirages over desert wastes, hailed it as a symbol to direct them onward toward their promised land. They promptly named it the Joshua tree. In discussing the time-honored subject of conservation and development of our natural resources, I think it appropriate that we inquire whether we have yet reached the Joshua tree and whether we can determine the direction in which it points.

It is necessary first that we take a new view of the kinds of natural resources that support our national economy. We should

assess some of the more important programs of action already under way. Finally, we should examine the character and extent of the participation by the people that will be required if conservation measures are to be projected upon a scale that will achieve measurable progress.

HISTORY AND SCOPE OF SUBJECT

Some 30 years ago the attention of the Nation was dramatically called to the subject of conservation of our resources when President Theodore Roosevelt, in 1907, called a conference with the Governors of the 48 States at Washington to discuss the problem. From this meeting dates the serious attention to conservation which our Nation and the various States have been giving it. At that time people were thinking mainly in terms of what the Government might do to bring about a more sparing use of our exhaustible forests and irreplaceable minerals.

I would like to consider the subject somewhat more broadly. The squirrel that saves for the winter is too restricted an analogy if we are to understand the problems of conservation in an age of high technology, impoverished agriculture, and deficit regions. In recent years we have found that in a democracy conservation depends upon the solution of a larger problem. In contrast to a totalitarian scheme, we realize that the public interest in conservation must be promoted through the effective utilization of the individual initiative of the millions of land owners and custodians of our resources. Their economic practices must include the conservation of resources rather than their destruction.

So long as the frontiersmen were surrounded by the riches of nature and no thought entered their minds of the limited and exhaustible character of the resources, neither they nor anyone else thought of conservation. As time went on the speed of production and the consequent exhaustion of resources were vastly increased. Due to better organized effort and financial concentration in the cities, rural areas became impoverished. The supplies of timber and minerals were drawn upon lavishly.

It may have taken several thousand years for large sections of the Mediterranean nations to become treeless and barren because in those hand-labor eras both production and resource exhaustion were slow affairs. Today in the United States, in less than two centuries, large areas have lost most of their soil fertility and all of their good timber. The dust storms of the great plains, the gullied slopes of the South, the cut-over areas of the Great Lakes, the depleted oil reserves of the Southwest and thousands of worked-out mines in coal, iron, copper, phosphate, silver, lead, talc, and other minerals throughout the country—all testify to the speed with which our modern high technology age operates.

DIFFERENT KINDS OF NATURAL RESOURCES

It is sometimes forgotten that there are three entirely different kinds of natural resources. The first consists of exhaustible resources like minerals. Coal, iron, oil, and phosphates dwindle in supply as they are used, and become correspondingly more costly. Ultimately the supply will be entirely exhausted. The second type includes agricultural and forest products which are renewable resources, and in the third category are the inexhaustible resources of air and water.

FUNDAMENTAL PRINCIPLE OF CONSERVATION

It is very useful for purposes of analysis that we bear these three categories distinctly in mind, particularly in connection with developing programs of public action. This is illustrated by the application of one of the great principles of conservation: that by using comparatively small quantities of some of the exhaustible resources in the right way we can multiply the quantity of the inexhaustible resources in available form for man's continuous use.

One of the best illustrations of this may be found in the use of phosphates in agriculture. A comparatively small amount of phosphate in the soil stimulates the growth of legumes and grasses which conserve the soil by their matted roots and reach into the air and capture more nitrogen than they consume. This nitrogen is deposited in the soil and enriches it for the growth of other plants necessary for food and fiber. To carry the illustration further, suppose that cattle are raised on the land. Only 6 percent of the materials in the carcasses of cattle are minerals originating in the soil. Ninety-four percent come from the air and water through the grass upon which the cattle feed. This grass has performed the miracle of drawing from the air and water most of the elements needed in its growth. The small amount of phosphate, therefore, has set in motion the forces which create a large amount of necessary, but inexhaustible, resources. Conservation, as thus defined, means a better and more abundant use of our resources.

But it is not always practicable at present for farmers to manage their businesses in a way which will accomplish the above purpose. In the Southeast, for instance, historical conditions drove farmers to supply the world with its greatest raw product—cotton. Cotton is a tilled crop, and the cotton system leaves land exposed to erosion by water. On the average, it is estimated that about 13 tons of top soil have been lost from the lands of the South for every bale of cotton shipped. Cotton fiber and oil consist almost entirely of chemical elements (carbon, hydrogen, and oxygen) which are taken from the air and water. But the land suffers from loss of the nitrogen-carrying proteins in cottonseed. Most of it has left the South in the form of cottonseed meal, and the export of cottonseed and meal over the last 75 years has been a major cause of the exhaustion of the soil of the Cotton Belt and, in turn, of low farm income. Suffice it to say that one of the underlying reasons for low income and the widespread loss of soil fertility in the Cotton Belt is the fact that we have so far been unable to produce, grow, and market cotton under conditions which would keep the loss of irreplaceable elements in the soil to a minimum; instead, this loss has been tremendously high. It can well be said that in selling cotton on the market the South has sold its soil fertility.

DEPLETION OF EXHAUSTIBLE RESOURCES

The extent to which our exhaustible and irreplaceable resources have been depleted has been described more forcibly than time will permit today. Others also have called attention to the role of technology in accelerating this process. For example, in 1938 the estimated, proven oil reserves amounted to about 15,000,000,000 barrels. In 1937, 1,250,000,000 barrels were consumed. It is difficult to imagine modern civilization without gasoline; yet experts believe that even if newly discovered fields prolong the life of our oil reserves for a century, we may face a shortage with consequent higher prices in a decade or two. Conservative estimates place our coal reserves at about 3,000,000,000,000 tons. In the year 1929, 600,000,000 tons were produced and consumed. With coal our cause for concern does not relate to the imminent exhaustion of the total supply. The problem is one of conserving superior grades accessible to centers of use.

About one-half the timber on 850,000,000 acres of land has been exhausted within the past 300 years. Although this resource is renewable by proper practices over a period varying from 25 to 100 years or more, the magnitude of the conservation problem is apparent.

SOIL LOSSES

It is certain that even our present standards cannot long be maintained unless the exhaustible elements in the soil can be preserved and replaced. It is conservatively estimated that the loss from erosion is of the value of, roughly, $400,000,000 a year, or about 1,500,000,000 man-hours of labor. One of the soil elements, phosphorus, is necessary to the life of all animals and plants. A small amount of it is found in all soils, but it is being constantly exhausted by the growth of agricultural plants and, of course, by erosion. It is roughly estimated that about 3,000,000 tons of phosphorus are removed by crops or washed into rivers or the sea every year. Only 336,000 tons are replaced as fertilizer at the present rate of fertilizer use.

In a brilliant discussion of this subject by one of the most clear-thinking of our American journalists, Jay Franklin, he makes this significant statement:

"Our enemies are of our own household. Cornfields running down the river; cottonfields draining into the Gulf of Mexico; wheat lands on the Great Plains dyeing the Missouri or powdering the cities of the distant East; forests cut down and gullies eating farms like cancers; poor whites and croppers; chiggers and hookworm; malaria; ignorance; bewilderment; apathy."

ONE-THIRD UNDERPRIVILEGED

The statement commonly made and never denied is that about one-third of our people—in large part farmers who own or cultivate the soil—are ill-fed, ill-clothed, and ill-housed. To a large extent these are the people on whom chief dependence must be placed for conserving and restoring the 1,000,000,000 acres of lands which have felt the grip of the long fingers of soil erosion. This is about one-half of the entire land surface of the United States. This calls for war on a hundred fronts.

Are these problems being attacked in an effective way? That remains to be seen. Perhaps the most encouraging fact is the growing sensitivity of the general public to the importance and complexity of the problem. Moreover, there are hopeful signs of progress in the work that is being done by both the Government and private industry in developing greater efficiency in the production and use of coal and petroleum, particularly in reserves at the lower quality grades.

FOREST CONSERVATION

It is not necessary to dwell upon the forest-conservation program now being carried on by both the Government and private industry. The work of fire protection, selective cutting, reforestation, and insect control is a long story in itself. One of the most interesting phases of this work is the planting of tree belts in the prairies and plains of the West. Within 5 years, 11,000 miles of tree barriers, 100 feet wide, have been planted. The trees have grown from 4 to 8 feet each year, and some of them are now about 35 feet high. When these projects were first discussed, some 6 or 7 years ago, many a Senator and Congressman laughed aloud. They said it was ridiculous and could not be done. Being a Westerner myself and knowing something of these dry plains, I, too, was skeptical of these projects, but that work is being done and the results in reducing moisture losses, in protecting cultivated crops, and in making the surroundings more attractive are a delight to one who beholds them.

WORK OF THE A. A. A.

The Agricultural Adjustment Administration has a widespread program in more than 3,000 counties in the United States. There are about 6,000,000 of the 9,000,000 farmers in this country who are cooperating. These participating farmers have diverted some 30,000,000 acres from soil-depleting crops to soil-building crops, such as grasses and legumes. About 5,500,000 tons of lime and fertilizer have been applied to soil-conserving crop lands. In the

far West some 25,000,000 acres of range land were reseeded in 1938 with the building of small dams, the drilling of wells, and the development of springs going on apace. Cropping systems are being changed, terracing of hillsides is going on at a rapid rate, contour cultivation, furrowing, strip cropping, and better farming methods are being encouraged. To enable these millions of farmers to carry on these conservation practices and to control surplus production, so-called conservation and benefit payments are being made to them by the Government. I think these payments were necessary in making it possible for a majority of these farmers to adopt the conservation measures in the public interest.

T. V. A. ESTABLISHED

In 1933 many of these problems of national scope were defined for solution upon a regional scale by establishing the Tennessee Valley Authority. Since the program of conservation now underway in the Tennessee Valley region of the Southeastern States is the one with which I am most familiar, possibly you might be interested in a review of some of its more important operations and results. The acute conditions in that region have been colorfully described in the report of the National Emergency Council.

CONDITION OF TENNESSEE VALLEY IN 1933

There are about 24,000,000 acres in the Tennessee Valley drainage area. On this there are about 250,000 farms supporting 1,500,000 people. These farms average 70 acres in size with about one-half in crops and pastures and the other half in woodlands. Of the 8,500,000 acres in crops and pastures, about 1,000,000 acres have become totally unfit for cultivation. Another 2,000,000 acres have lost half the topsoil, and about 4,000,000 additional acres have been subject to appreciable erosion. The rich bottomlands were suffering from floods and the uplands from erosion. The one-crop system has led to soil mining through the cultivation of cotton and corn as the principal source of cash income.

And yet this is one of the richest sections of the country in important natural resources. There are rich phosphate deposits and other minerals. Of the 18 minerals listed as critical to national defense by the War Department, 14 may be obtained in commercial quantities in the Tennessee Valley region. There was a large amount of undeveloped water power; the timber resources, although seriously depleted, were of great potential value. There were unusual possibilities for cheap water transportation on the Tennessee River.

This area offered an opportunity for the development of these resources not equalled, perhaps, by any other section in the United States. The water power could be developed by the building of a series of dams. The river could be improved for modern inland water transportation. Floods could be reduced in the Tennessee and Mississippi Rivers. All of these public purposes could be served by the same series of dams. But there remained perhaps the more important task of protecting the land by controlling the water where the rain falls.

WORK OF T. V. A.

When the Tennessee Valley Authority was established it represented perhaps the most comprehensive effort ever undertaken to arrest the terrific waste of the resources throughout an entire region. It took over Wilson Dam, the hydropower plant and steam plant, and the nitrate plants which had been constructed during the World War. It proceeded with the building of other dams and power plants on the Tennessee River and its tributaries. To date, it has practically completed 6 dams and power plants and is in the process of constructing 3 more, which, with the Wilson plant, will complete a 10-dam system. Two of these dams, Norris and Hiwassee, are located on tributaries of the Tennessee River. The others are located on the Tennessee River itself. With the completion of these dams and the power facilities in connection with them, the Authority will be one of the largest wholesalers of power in the world. It will have an installed capacity of more than 1,500,000 kilowatts of electric power. It will be operating in 7 States. It is furnishing power at rates from 25 to 50 percent lower than that furnished by private power companies.

POWER SAVINGS

With the recent purchases of power facilities of companies in the Tennessee Valley area, the Authority is now supplying electricity to municipalities, cooperatives, and industries, with customers numbering about 375,000. The annual savings to these customers during the present year will amount to approximately $8,600,000. It is interesting to observe that private power companies operating in the Southeast have found it to their interest to make material reductions in rates, particularly in the domestic and rural classes of service. Indeed, since 1933 power companies throughout the United States have profited by placing in practice the time-honored principle of low prices and mass consumption.

This development of water resources in the interest of the people of the region is of far-reaching significance to the causes of conservation. The series of 10 dams, when completed, will convert the erratic and winding Tennessee into a chain of lakes. The sources of energy so developed will last forever. Loss of life and property from floods will be reduced. Cheap water transportation then available will start many low-grade commodities along the road to processing that would otherwise lie neglected and unused.

Another important phase of the conservation program of this agency is concerned with the restoration and maintenance of the fertility of the region's soils.

Since the Muscle Shoals plants were transferred to the Authority, they have been dedicated as a national laboratory for use in a program addressed to this perplexing problem. The first phase has involved the development of highly concentrated phosphate fertilizers and processes for their production in facilities designed and installed for the purpose in the Muscle Shoals plants.

T. V. A. FARM PROGRAM

As new materials are developed they are tested under scientific conditions in agricultural experiment stations operated in connection with land-grant colleges located in the seven Tennessee Valley States and in all parts of the country. Upon the basis of scientific information thus obtained, the material is then tried out by individual farmers under practical conditions. The farmers who conduct these demonstrations have been chosen for that purpose by voluntary community clubs that have been organized in nearly every community in the Tennessee Valley area. Expert guidance is provided by the county agents of the agricultural extension services which are likewise affiliated with State land-grant colleges. Thus, as sound results are observed in practice at these centers of community study, the principles can be extended and applied by others in the group. As of January 1, 1940, there were no fewer than 21,206 unit and area test-demonstration farms operating within the Tennessee Valley counties, containing a total of over 3,000,000 acres of land. Over 900,000 of these acres have been treated with concentrated phosphates manufactured by the Authority. In addition, over 500,000 acres have been terraced in these counties, and approximately 100,000,000 trees have been planted.

RESULTS

These activities are resulting in erosion prevention and land rehabilitation upon a vast scale. The results in these communities in the way of improved housing, increased and better grades of livestock and poultry, and increased incomes are definite and gratifying. Community life is definitely reflecting these results. One could supply hundreds of striking examples in pictures, in financial records, and in the testimony of those who have been benefited.

In any review of the subject of conservation there is much to support the contention of those who hold that modern technology has been a dubious blessing. However, I dislike the logic of that position for it leads to a negative conclusion. I regard the program of the Tennessee Valley Authority as demonstrating the possibilities in redirecting the processes of technology in the interest of conservation rather than exploitation.

This principle is somewhat easier to visualize in terms of large operations. It is dramatized by giant dams and extensive plants and laboratories. In reality, however, the most significant application of modern technology will be found in the solution of the problems of the thousands of small farmers, timber owners, and residents of rural areas. They must be provided with the tools that will place the practice of conservation on a paying basis at the grass roots.

NEW DEVICES

In the concluding part of this discussion, I should like to review the results of that part of the Authority's program carried on by a group of research engineers who are constantly working at the job of finding ways to develop new tools, new farm equipment, and new processes of preserving and improving farm products in the valley. They are also finding ways for the farmer to obtain the benefits of long-discovered processes and devices not heretofore available to those of small means.

Not long ago, in their studies of the needs of small farmers in the Tennessee Valley, the T. V. A. research engineers devised a new type of hay drying equipment so low in cost that it may be utilized by the small farmer. Before that, available hay-drying systems had cost from $3,500 to $10,000, which is, of course, far beyond the means of most farmers. The new hay drier may now be installed for about $300. This new device is of great importance to Tennessee farmers. Fifty-two inches of rain in a year makes hay grow well, but it also prevents its curing. With this new device hay drying begun in the field is completed in the barn by air forced through the hay with an electric blower. The cost of electricity to run this blower is only 86 cents per ton of dry hay, as compared with four times that cost in operating the large artificial heat drier. Not only that, but tests show that the barn-dried hay is richer in vitamins than the field-dried hay. The use of this machine is now spreading to other States.

It helps the farmer to do two things—conserve his soil and improve his income.

My associate, Mr. David Lilienthal, recently had occasion to describe for you another new farm implement as an example of effective results from the field administration of the Authority's program. I refer to the furrow seeder which plants grain and and distributes fertilizer in the same process in furrows on hillsides without disturbing the matted root system between the furrows. This is a remarkable device for conserving the soil while obtaining the benefit of sustained yields. Perhaps this implement may amend the thesis of a remarkable film of a few years ago entitled "The Plow That Broke the Plains," for in effect this plow builds thousands of miniature dams on the hillside to hold the rain where it falls.

Mr. Lilienthal also called attention to the community refrigerator located at Clarksville, Ga., where a community of 61 families

stored their meat and other perishable products. There are 10 other such projects located in the Tennessee Valley. In one, located in Etowah County, Ala., during the first 12 months of operation, there were stored 17,500 pounds of produce for 57 families.

Before these refrigerators were known in the South, nearly one-fourth of the farmer's pork killed and cured by him was lost. In Tennessee, farm people eat less than 5 pounds each of fresh beef a year while in Ohio each person on the farm eats 44 pounds in a year. Before the advent of walk-in coolers and other refrigerators, a large part of the fruit and vegetables of farmers was lost. As a boy in the South I saw hundreds of barrels of apples, peaches, and other fruits rot on the ground in the summer and fall, and the apple I found in my stocking on Christmas morning was a perfect delight. This apple had come 1,000 miles from the State of Ohio.

Here again a new machine has vastly improved the living conditions on the farm. With refrigeration facilities available, the southern farmer is more ready to increase his livestock in a cover-crop program to conserve his soil.

The sweetpotato is an important product in the South. Many a family depends upon it for consumption and for market. A few years ago the losses ranged from 10 percent up. Perhaps the average loss due to inadequate curing facilities was 25 percent. The market was literally flooded with sweetpotatoes at harvest time, and curing and preserving them was necessary.

A device to insure proper curing and a high quality product for the market was urgently needed. Within the last few years the use of electricity in curing and storing houses has reduced storage losses from 25 percent to 5 percent. This means a saving of one-fifth of the farmer's crop of sweetpotatoes, and an increase in the price of about 15 cents a bushel in many cases. This process, adapted and improved by the Tennessee Valley Authority, is now in use in many places in the South.

This, too, means improved incomes and less pressure on the land.

These are merely illustrations of the types of new equipment which are placed within the reach of individual farmers or small groups to be used by them in conserving products and in supplementing their incomes.

Other examples of such machinery which are the subject of study, experiment, and demonstration by the technicians of the Authority in cooperation with local institutions are a small automatic feed grinder, low-cost thresher for grains and legumes, lespedeza seed harvester, equipment for cutting and storing legume silage, scarifier for legume seeds, seed cleaner, automatic device to meter phosphoric acid for legume silage, electric pump with flexible piping for irrigation of truck crops and pastures, electric brooders for pigs and poultry, soil sterilizer, electric hot bed, dairy utensil sterilizer, water heater, improved farmyard lights and lighting systems, electrically heated drying cabinet for aging hams, and insect trap.

PORTABLE MOTOR

One of the most unique and interesting proven devices is a portable motor, which may be put to more than a dozen uses on the farm. Any machine on the farm ordinarily turned by hand can be operated with one of these small electric motors at a cost of about 1 cent per hour for electricity. Such a motor with one-fourth horsepower costs from $5 to $18. It can easily be carried around and safely plugged into any convenient outlet. It can be used to shell corn, mix concrete, churn, clean eggs, freeze ice cream, grind sausage, cut green feed, sharpen knives, and do almost anything else that the ordinary hired man can do.

In addition to research for the individual farmer are some significant contributions of technology to the development of local industry in areas now dependent for income on the shipping out of raw materials.

The quick-freezing process has been described to you by my colleague. The raising and preserving of strawberries and other fruits and vegetables relieves pressure on the land and increases financial returns to the farmers. These returns have been doubled in several communities.

The same sort of thing is being done as to methods of using the minerals located in this area, with emphasis upon the use of waste products, byproducts, and such common minerals as limestone and clays. There are projects for using scrap mica in plastic products, vermiculite for insulation, kaolin for fine china, olivene as a new source of magnesium compounds for refractories, talc for ceramic uses, silica for electric furnace operations, and special sandstones for building purposes.

At the risk of being tedious I have gone into some detail to show you the sort of machines, equipment, and processes which are being developed to supply the needs of farmers, to improve their income, and to enable them to carry out conservation practices. Not all of the devices mentioned have been invented by the specialists of the Tennessee Valley Authority and the land-grant colleges, but a number of them have been invented and patented by the Authority, and others have been improved and adapted to the needs of the farmers in this region. The main objective is, of course, to place suitable tools in the hands of the people, by whomsoever devised or invented.

EXAMPLES OF INDIVIDUAL RESULTS

The most important thing of all, however, is the result of the introduction and use of these new devices. What are the benefits to the soil? What are the benefits to the farmers engaged in the program? The proof of the pudding is, of course, in the eating. I know of no better way to bring the results to you than to give you some specific instances which are typical of hundreds, if not thousands, of others.

In north Georgia, Mr. J. S. Christians is a dairy farmer. In 1936 he had 25 cows and, without any electrical equipment, made a net farm income of $975. In 1937 he obtained electric service and installed refrigeration and other equipment to enter the grade-A bottle-milk business. His farm electric equipment cost $927. A truck and other supplies cost him $1,075. This made a total of $2,344 invested in farm and home improvements. His net income for 1937 was $2,364, or an increase of $1,389 over 1936. This was an increase in net income of nearly 60 percent on his total investment in these improvements.

Mr. Henry Calloway, a truck grower on a neighboring farm, installed insect traps on 3 acres of tomatoes. These traps are electric lights with charged wires to which insects are attracted and by which they are electrocuted. Result of the lighted patch yielded over 90 percent worm-free tomatoes, while the balance of his 15 acres planted to tomatoes was a complete failure due to an infestation of corn-ear worms.

Mr. G. C. Harris lives at Ranger, Ga. He has a 600-bushel house for storing sweetpotatoes. After he had installed electricity for curing and storing sweetpotatoes he not only saved a substantial percentage of his potatoes but sold all his crop at 15 cents a bushel higher than the going prices. He says he had enough calls to have doubled his sales.

The Cooperative Cotton Mill at Wilson, Ark., of which Mr. C. W. Hoover is manager, purchased one of the first pressure cookers for processing cottonseed developed by the T. V. A. and the University of Tennessee Engineering Experiment Station. Its operations effected savings due to greater oil recovery and better quality of products in sufficient amount to liquidate the investment in 1 year. The cooker also makes it possible to process other oil seeds, such as flaxseed, peanuts, and soybeans, with equal efficiency. Translate this experience to the 500 operating oil mills in the South, and the benefits accruing will mean that less dependence need be placed on cotton fiber as the basis for the South's income.

One could go on indefinitely with this recital of individual cases, but it is unnecessary. Every year adds to the list of such new devices and to the number of farmers using them.

A JOINT PROBLEM

This whole problem of conservation is of common interest to Government and private enterprise—Government because it is concerned with the public welfare and private enterprise because its solution will expand the opportunities for industry.

Mr. Walter Lippmann, one of the foremost journalists of the day, expresses this point in eloquent fashion. He sums up the significance of T. V. A. to the conservation movement in these terms:

"It is an extremely short-sighted view which says that there is here any conflict of fundamental principle with the institution of private property of free competition and private initiative. It is only on the foundation of great natural resources that a free economy can perpetuate itself. To conserve those resources is to defend the foundations of democratic capitalism; to let them be destroyed is to make a free economy impossible to maintain."

For a hundred years, with all the advance in scientific research and invention of private industry, the depletion of the Nation's vital resources has gone on at a rate unequaled in the history of the world. The obligations of the citizen, of business, and of the Government are clear and unequivocal.

Of this, Mr. Lippmann says:

"As I see them, the Tennessee Valley Authority is a modern development of the conservation movement. The underlying idea of that movement is that the natural resources of the country, its lands, forests, minerals, rivers, do not belong to one generation, but to all the generations to come, that to protect them from exhaustion and destruction is as much a matter of vital national defense as to repel a foreign invader. That to insure their soundest development for the long future the Government must take a hand, because only the Government lives long enough to wait long enough to act for a long future."

Conservation as thus defined by Mr. Lippmann does not mean a niggardly hoarding of resources, but more enlightened practices in their development and use. The T. V. A. program has shown how government can mobilize agricultural and engineering technology in cooperation with private enterprise in the service of this new type of conservation.

WAR ON A HUNDRED FRONTS

During this last hundred years we have witnessed amazing scientific progress and wealth on one hand, and startling resource depletion and poverty on the other. The eight to ten million unemployed is a stubborn, threatening fact, and the 30,000,000 ill-fed, ill-clothed, and ill-housed present a fateful challenge to this democratic Government.

I think America has accepted the challenge. I think we have decided to make a physical reconquest of our land and a social regeneration of our people. But this calls for war on a hundred fronts to conserve and develop the physical and human resources of the Nation.

This war can be won. But it will take all the skill, all the inventive genius, all the tenacity, energy, and imagination we possess; and it may take the next hundred years.

Radio Correspondents Association Completes First Year

EXTENSION OF REMARKS

OF

HON. JOHN J. DEMPSEY

OF NEW MEXICO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 4, 1940

ARTICLE BY ALBERT L. WARNER

Mr. DEMPSEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article written by Albert L. Warner which was published in Broadcasting magazine:

[EDITOR'S NOTE: The author of this article was for 10 years a prominent Washington newspaper correspondent and is a member of the famed Gridiron Club. His last newspaper assignment, before becoming Washington correspondent for C. B. S., was the chieftancy of the New York Herald Tribune Washington bureau. On May 20 he was elected 1940 president of the Radio Correspondents Association succeeding Fulton Lewis, Jr., M. B. S. commentator, founder, and first president of the association.]

(By Albert L. Warner)

In mid-May the radio correspondents of Washington finished their first year of complete recognition on an equal footing with the representatives of the press in the Nation's Capital. Given our own seats in the congressional galleries, our own correspondents' rooms in the Capitol, and admitted to all the Presidential and Cabinet press conferences, we were acknowledged, last June, for the first time, an important part of the Washington news-gathering corps. And this summer for the first time there will be reportorial seats assigned to radio newsmen at the national conventions.

This acceptance of the Washington radio correspondent may be explained perhaps in the fact that the May 20 meeting, this year, of the Radio Correspondents Association in Washington was attended by 40 members.

AT THE SOURCE

Forty radio correspondents in Washington. Two years ago you didn't even hear of radio news staffs. The growth is, I think, due not only to the network correspondents, whose work has been in the forefront of public attention because of the fact that they actually go on the air. It is due also to news gathering and editing staffs and to the emergence of a new type of radio correspondent who covers Washington news for a single station or regional network, and whose news is brought to the radio audience indirectly, by filing wire reports to the station he represents.

I think this is an extremely interesting development in radio's coverage of news, acknowledging something I have always felt, that radio has depended a little too much on the services of press tickers. To interpret news without having a first-hand contact with the source of that news and those who make it is a difficult job indeed. It is particularly difficult for the newsman whose report is given directly by radio.

Coming so new to radio, it's natural that I should be aware of the similarities and differences between press and radio coverage of Washington's news.

I suppose what struck me in making the change from newspaper to radio was radio's personal touch—that direct communication between the reporter and the listener, the tone of voice, the inflection, the personality which a radio correspondent inevitably inflicts upon the listener. A talk is apparently a much more personal thing to the listener than a newspaper article is to the man who reads it.

NOW A PERSONALITY

My name was on the front page of a New York newspaper with bylines over Washington articles for a good many years during a period in which there was absorbing interest in Washington activities. Except for a very occasional letter from an acquaintance, and once in a long while from an outsider, I never heard from anyone except other newspapermen. I suspect that newspapermen are the only people who bother to look at bylines over news articles in the papers.

On the other hand, I was immediately struck by the number of people who are interested in the radio speaker as a personality. My fan mail is not so voluminous that I have difficulty in answering it, but the fact that any complete strangers should take the trouble to write notes indicates what a difference there is between the way people listen to radio news and the way they read a newspaper.

One of my first postals was received from a gentleman in New Jersey who said something to this effect: "You are just a loud-mouthed anti-new dealer spouting chamber of commerce stuff. I and all my friends are going to turn off the radio when you come on."

Three weeks later I was amazed to receive another postal from the same gentleman saying: "I was mistaken. I think you are being fair. Good luck."

Then there are people who are touched off into flowery letters or into criticism by a word picture or a phrase. Not so long ago I went to a press conference conducted by the economic negotiators for Britain and France—economists who were trying to straighten out irritations in the diplomatic relations between the Allies and the United States. One of the Britishers seemed to me a typical Englishman, and I happened to mention on the air that he wore baggy trousers. A post card the next day informed me that I had insulted the English, and that my adjective had proved me a German propagandist of the worst stripe. I replied that my own trousers were frequently baggy.

Radio reporting is thus to a considerable extent subjective because of the effect of the broadcaster's personality on the listener. But the necessity for objective reporting is equally obvious. If you write for a particular newspaper, you are often writing for a particular class of readers. Some of the material emphasized in the New York Evening Post, a liberal paper, is often quite different from material emphasized in the conservative New York Sun. On the radio you have no particular group of listeners; in fact, you have the most cosmopolitan audience that you could probably find anywhere. You could not satisfy those listeners for very long if you were not reasonable, fair, and objective. You could not serve the public interest if you did not have these qualities.

A GROWING CORPS

Combining the color of events, the interpretation of them, and the personal touch with objectivity and impartiality is the task of the radio correspondent. It is not an easy one.

In Washington is growing a corps of experienced reporters, now devoting themselves to radio, who know their job and keep at it. This is the basis for any good reporting—radio or newspaper.

In Fulton Lewis, in Earl Godwin, in H. R. Baukhage, and I hope in myself, we have old-fashioned reporters who ought to know what is going on and why. In the days just before the war broke out, and onward as foreign affairs topped everything in the news, I have practiced calling on at least four or five different officials in the State Department every day, including an Assistant Secretary of State or two. This is in addition to the press conference with Secretary Hull. Add to that a visit to Congress and to the War Department and contact with the White House.

If then I could not give an ample, accurate, and fair presentation of the attitude, opinions, and predictions of official Washington, it would be my fault.

Washington's radio correspondents celebrate, in the first anniversary of their recognition as an integral part of the capital's news-gatherine machine, the recognition of the care and thoroughness and difficulty which are part of the radio correspondent's job.

Registration of Aliens

EXTENSION OF REMARKS

OF

HON. SAMUEL DICKSTEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 4, 1940

EDITORIAL FROM THE NEW YORK TIMES

Mr. DICKSTEIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter which appeared in the New York Times, of June 3, 1940:

[From the New York Times of June 3, 1940]

INCONVENIENCE FOR NONALIEN—PROPOSED REGISTRATION IS REGARDED AS PUTTING BURDEN OF PROOF ON CITIZEN

TO THE EDITOR OF THE NEW YORK TIMES:

In the debate on the pros and cons of registering and fingerprinting aliens, the most important aspect of the matter has escaped public attention. The chief hardship resulting from such legislation falls not on the alien but on the American citizen. Most immigrants come to the United States from countries where registration at the local police station has been a routine matter for generations. It is a feature of nations where universal military service is in force. No one, be he citizen or alien, in those countries can move three houses down the block without reporting this fact to the police.

But here is the rub. All the alien will have to do in the United States is to say he is an alien and be registered. Most aliens will have their legal documents in good order. But the American citizen, especially the native born, will have the harder job—he will have to prove that he is an American.

Do our people realize that there are millions of native born among us whose births were not registered because they lived in sparsely populated sections of the country where this was not compulsory, or the records were carelessly kept and were destroyed by fire? How will these millions prove their citizenship?

Perhaps some will recall the difficulties Will Rogers had the first time he applied for a passport and was unable to produce a birth certificate. And yet 130,000,000 Americans will have to walk around with proof of citizenship in their pockets because anyone objecting to their opinions, political activity, color of skin, or what have you can challenge them as aliens and they will be unable to prove their citizenship. The opportunities for persecution, suppression of unpopular opinions and activities, such as work for peace and labor organizing, are unlimited.

Those who don't believe this is possible need only recall the days of the Palmer raids after the World War. Or let them study a larger-scale model—the enforcement of anti-Semitic legislation in Germany, Italy, and Hungary. In these countries a Jew merely had to declare himself a full, half, quarter, or sixteenth Jew and his statement was accepted. But the greatest part of the population of these countries had to spend an amount of money estimated to have fully covered their reparations payments in order to pay lawyers and researchers to excavate three or four generations of family history, paternal as well as maternal.

No "fifth columnists" are going to be trapped by this sadistic, hysterical legislation. Any "fifth columnist" worth his hire will be smart enough to evade the law. But 130,000,000 decent Americans will rue the day they muzzled themselves thinking they put only the alien population under control.

Under the smoke screen of war hysteria this elaborate plan for police surveillance of a whole people is being smuggled into our lives. This will establish a totalitarian routine, not protect "our way of life." If all that our would-be protectors can do is imitate the very thing we fear, why not invite Heinrich Himmler to do it for us?

EDITH WYNNER.

NEW YORK, *May 29, 1940.*

Current Prices of Oils and Fats

EXTENSION OF REMARKS

OF

HON. VINCENT F. HARRINGTON

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 4, 1940

LETTERS FROM HON. FRANK W. BOYKIN, OF ALABAMA, AND SECRETARY HENRY A. WALLACE

Mr. HARRINGTON. Mr. Speaker, under leave to extend my remarks, I wish to include a letter by Hon. FRANK BOYKIN, of Alabama, to Hon. Henry A. Wallace, together with a news release issued by Mr. BOYKIN and a subsequent news release from the Department of Agriculture.

Because of the severe decline in prices in lard and other pork products and the resulting falling off in the price of cottonseed oil, it appears to me that the efforts made by those cooperating is of considerable interest to the agricultural West and South.

The matters referred to follow:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C.

The Honorable HENRY A. WALLACE,
Secretary of Agriculture, Washington, D. C.

DEAR MR. SECRETARY: This letter is being sent at the request of the congressional delegation selected to visit with your own good self and which attended you at your office to discuss the current prices of oils and fats.

May I take this opportunity of first thanking you for the courtesies extended Senators CONNALLY, BILBO, ANDREWS, RUSSELL, MILLER, and LUCAS, and Representatives PACE, HARRINGTON, HARTER of Ohio, COLMER, JARMAN, HOBBS, and myself, as well as thanking you in behalf of the representatives of the National Grange, the National Farmers Guild, the Southern Commissioners of Agriculture, the Domestic Oils and Fats Conference, and such other representatives of agriculture as were invited to join our delegation in the conference arranged with you.

I am personally happy to extend further the congratulations of this group for the splendid work you have already accomplished in behalf of our wheat, corn, and other grain farmers. We rejoice with American agriculturists that you, Mr. Secretary, by your courageous action taken with dispatch, saved these farmers from one of the worst drastic price declines that ever occurred in so short a period during our national history.

Not alone did you arrest the "price panic" decline, in the boards of trade, but the recovery already effected in prices has proved your action was both economically and financially sound.

It is true that severe "breaks" occurred in all markets in financial, as well as commodities, in these darkened days of the European war.

It might be said that the heavy liquidation which occurred, and which for that matter is still occurring, is attributed to the discounting of the worst happenings in the foreign situation. But a floor has been put under prices in the board of trade. That class of producer can suffer no further drastic loss.

There is one class of commodity traded, however, in our own as well as in world markets that should not any longer have to endure the price trends current in its price structure. I refer to the current prices on American oils and fats.

Let me point out, Mr. Secretary, but a few market facts as to some of the price trends which prevailed in the oils and fats market even subsequent to the time you had succeeded in stopping the runaway in grain prices.

1. Chicago lard futures declined from 63 to 77 points while cash lard itself has gone off 66 points.

That the break of 68 points in the lard market occurred not only during the time that the price of corn was pegged, but actually occurred after corn had shown marked strength and recovered an actual increase above the price at which it had been pegged.

2. While the top last week on Chicago hogs fell only 15 cents per hundred, cash lard in the same market and period fell about 68 cents per hundred pounds. This was a price loss four and a half times as much as was taken on the hogs from which the lard had been rendered.

3. The prices of cottonseed oil which always follow the price of hog lard now average 1 cent lower a pound than they did a month ago. A declining 55 to 59 points last week alone makes new lows for the season.

4. Despite the fact that the prices of corn now average 9 cents per bushel above the market price of a year ago, we find that lard itself, a product of the corn-fed hogs, is selling at 1 cent less than a year ago. This establishes a new record low price for that commodity.

Above are exhibited but a few facts indicative of the current price trends. They are cited to disclose the adverse effects of current war conditions upon the domestic prices of oils and fats.

They are, however, entirely at variance with the factors which normally make for supply and demand, and which trends instead of bringing about the ruinously low prices currently received by our cotton planters and hog raisers, should, in the face of present stocks, make for an increase in the price, rather than a decrease.

Mr. Secretary, I ask that you believe with me that the present low prices which are due wholly to our domestic market-pricing system and are in no wise to increased imports. This is clearly borne out by the fact that the imports of foreign edible oils in the first quarter of 1940 were 60,000,000 pounds less than similar imports of such oils in the first quarter of 1939.

I would point out further that the present decline in the price of edible oils and fats is in no manner attributable to any slackening in exports. This is made evident by the fact that the exports of edible oils in the first quarter of 1940 total nearly 36,000,000 pounds, compared with the 8,000,000 exported in the first quarter of 1939.

Despite all arguments to the contrary, from the above it can clearly be seen that under our present trade program and policy, not alone have exports increased, but our imports of competing oils have been decreased.

That the current low prices are not due to any decline in domestic consumption is made evident by the following statistics which clearly reveal that not alone have we increased our domestic consumption of cottonseed oil, but also an increased consumption in the current year of "hog lard," unquestionably due to the beneficent action program of the Federal Surplus Commodity Corporation.

This contention is supported by the following table of consumption:

Monthly consumption

	Cottonseed oil		Lard (inspected)	
	1939	1940	1939	1940
	Barrels	*Barrels*	*Pounds*	*Pounds*
January	229,224	267,306	79,000,000	113,981,000
February	221,916	213,350	72,000,352	62,089,000
March	306,613	243,087	73,000,314	96,000,000
April	204,924	257,324	(1)	(1)
Total	962,747	981,667	224,000,000	272,746,000

[1] April statistics official for lard not yet available.

That our cotton planters and hog raisers are now bearing the brunt of the effect of wartime conditions upon price and are taking all the loss is made evident by virtue of the fact that the price of vegetable shortening has not shown any change whatever in the last month, while the prices of the raw materials which enter into the shortening have been showing serious loss to our producers of the raw materials.

Prices

	Month ago	Week ago	May 21
Lard, loose, Chicago	5.60 cents average.	4.70 cents average.	4.65 cents average.
Crude cotton oil, S. E. Val	6 cents	5⅜ cents nominal.	5 cents nominal.
Crude cotton oil, Texas	5¾ to 5⅞ cents nominal.	5½ cents	Do.
Vegetable shortening, drums	9¼ cents pound, New York.	9¼ cents	9¼ cents.

It is because of these facts that as Representatives to Congress from the agricultural areas of the Nation we are again addressing you.

We know that you realize the problem fully well and will render all possible aid and assistance to our primary oils and fats producers.

We also know that you know that under our present cropping system that practically the entire cotton crop is mortgaged even before it is made and, furthermore, that practically the sole remaining cash crop left to millions of our cotton planters not currently mortgaged to make the crop is the cottonseed itself.

We believe further that our minds meet on the necessity of doing everything in our power not alone to protect the current prices on these commodities, on that portion of those crops now being marketed from the last crop year, but that we must act now; if the ruinously low prices which characterize the present markets are not to be reflected or actually continued as the price to be paid and received for the entire crop of cottonseed and hog lard now coming into production.

No currently informative statistics or data are now available as to the stocks of any oils and fats on hand (except the monthly report as to cottonseed oil). There is, however, a bill now pending in Congress—S. 3153—which will make these necessary data as to all oils and greases available in the future. We are hopeful that it will pass both Houses this session.

One thing, however, is patent. We know full well that simple business acumen and judgment would dictate that the processors of America's oils and fats would avail themselves of the low-priced stocks now available and that they would stock up on the disastrously low prices which now obtain in our markets and build both their inventories of raw materials as well as inventories of products in both edible and inedible products such as margarine, shortening, soaps, paints, etc.

Therefore we take this opportunity to make request that you now stabilize the prices in the domestic markets at once. Further, that you stabilize them at some figure or price that will not alone protect the current market price but, and more important still, the prices which will be paid for the cottonseed to be sold by our farmers in the cotton harvest now estimated to begin in the Rio Grande Valley in about 2 or 3 weeks.

Is it necessary to point out that if something is not done and done now, that we will again enter upon this year's cotton-picking season with wagon seed selling at a sorry price of $10 per ton, as contracted with a parity price of $28.86 per ton, estimated as parity in the month of April.

Mr. Secretary, need I remind you that this is the identical condition with which you and your Department were faced at the beginning of the last crop year. You solved the problem for our farmers then! It is far more urgent that you solve it now.

Then, as now, Congress was about to adjourn. "Wagon seed" was then selling for $12.75 per ton. The crisis was such that various members of Congress of both parties stayed on in Washington even after Congress adjourned.

Then, as now, you received practically the same delegation from Congress to ask your help in solving the same problem. Through your efforts and without a dollar loss or cost, you brought the price to "parity" then. You must do so again! As a result of your efforts our cotton and hog farmers received a better price almost through the entire year, continued to receive it until this war condition arose.

The domestic processors of our cottonseed and other domestic oils and fats are few in number. They consist mainly of the packing, the soap, the margarine, and the paint industries. If these industries are enabled now to stock up on these raw materials, you may be well assured that next year will see a buyer's market throughout the entire season. If that occurs, Mr. Secretary, the income of our cotton farmers, which is now bordering on level of poverty, will fall even below that to a level of, may I say, economic, if not social, unrest.

That this is but a temporary condition is borne out by the following facts:

1. It is conceded that the corn-hog ratio is not at this moment conductive hog feeding. This would indicate—

2. That there will be a smaller hog production than in the crop just closed.

3. That there will be a marked increase in the sizes of the hogs marketed as compared with last year.

4. That there will be a marked increase in the price of hogs this year.

5. These factors should make for a higher price for hogs, consequently, a higher price for lard and hence a higher price for cottonseed and cotton oil.

Therefore, it would follow that to positively cure the ills of our present price problem and change the trends of the same, your Department would be fully warranted to proceed, through the Federal Surplus Commodity Corporation or the Commodity Credit Corporation to make purchase of the entire stocks of lard in the United States with full assurance that such a purchase program would entail no loss to your Department.

Appreciating your every effort to date to help this situation we are now asking that you adopt that program, because of all of the foregoing, and in doing so you will have done so in behalf of the producers of America's oils and fats that which your own self, Department, and Commodity Credit Corporation recently did for the naval stores industry of the Nation.

The naval stores industry were, as you well know, in a similar plight. They, too, had a problem similar to this one. To cure their ills you caused the Commodity Credit Corporation to buy up all of the available supply of resin and turpentine and by the orderly marketing of these stocks not alone saved that essential industry from decadence and bankruptcy, but actually showed a profit to the Federal Government of more than $670,000 through the orderly marketing of the products acquired.

My confidence in the success of the proposed loan, dictates that I remind you, Mr. Secretary, that with a national annual consumption of 1,500,000,000 pounds of lard that the entire stocks on hand today actually represent less than a 3-month supply of that indispensable food.

I would further point out that at current prices the entire lard stocks of 272,000,000 pounds could be acquired for a sum of less than $15,000,000.

Our principal source of supply of coconut oil, which is the main commodity competing with both lard and cottonseed oil, is the Philippine Islands. Cargo rates from Manila to the United States have recently been increased 30 percent. Inasmuch as the principal areas of production of other edible oils and fats are normally found in China, India, Dutch East Indies, Africa, and with higher shipping costs under wartime conditions, these demands for our own native oils and fats will be increased, not alone at home but also abroad. Demand will arise, not alone for our present but also for our future stocks of these commodities.

Continuing decline in imports augmented by the fact that there is a marked decline in the pig census under last year's production, coupled with the acquisition of 100 percent of the lard stocks on hand, would unquestionably result in—

1. The orderly marketing of next year's crops of cottonseed, peanut, and soybean oil, of lard and all other fats and oils, both edible and inedible.

2. In a fair price for such lard and cottonseed and other such oils and fats as are now being marketed.

3. In the insurance of a fair price, based on parity in the coming crop season for the cottonseed now coming into production and upon which cottonseed prices as a result of the program will result in millions of dollars added to the income of our cotton, peanut, and soybean producers, as well as to the incomes of our hog and cattle raisers.

In lieu of the foregoing I am instructed by the congressional delegation which visited you to ask that you proceed at once to acquire all of the 272,000,000 pounds of lard on hand in the United States.

Thanking you for your every cooperation and continued courtesy in this matter, believe me,

Respectfully yours,

FRANK W. BOYKIN, M. C.

AN OPEN LETTER TO SECRETARY WALLACE

WASHINGTON, D. C., *May 27, 1940.*

The press of Thursday carried a statement made by officials of the Federal Surplus Commodities Corporation in which they advised of being in the market for lard upon which they were requesting bids for 59,000,000 pounds.

It was currently reported that this purchase by the F. S. C. C. was in response to a request made by a congressional delegation, which called upon Mr. Wallace last Wednesday.

That delegation sought a conference with the Secretary in order to discuss with him the conditions which now prevail in the lard and cottonseed oil markets and the oils and fats industry in general as a result of war disturbances. The delegation was headed by Senator TOM CONNALLY and Representative FRANK W. BOYKIN (Democrat), First District, Alabama.

When interviewed as to what further action might be taken by either the Congress or the Department of Agriculture in lieu of the continued decline in prices, Mr. BOYKIN today declared:

"As spokesman for the congressional delegation which called upon Secretary Wallace, I wrote Mr. Wallace today, pointing out the need for further Federal action in order to save the Cotton South from

one of the most ruinous price periods, insofar as the sale of cottonseed is concerned, in the history of that industry. I wrote him in part:

"'As you well know, this year's cotton crop is now in the boll throughout the entire Rio Grande Valley. The picking of the cotton and crushing of the seed is expected to begin in from 2 to 3 weeks hence.'

"With hog lard selling as it did on Thursday last, at less than 5 cents a pound, the prices of cottonseed oil have now tumbled to new lows for this season. Our cotton planters are in despair. They are now convinced that without Federal assistance in the current marketing of both lard and cottonseed oil, that they will not get more than the sorry price of $10 a ton for this year's crop of cottonseed."

"Mr. Wallace knows," continued Mr. BOYKIN, "that under our present cropping system, that substantially the entire cotton crop is mortgaged even before it is made, and further, he knows that practically the sole cash crop left to millions of our cotton planters after the picking which is not mortgaged, is the cottonseed crop.

"We know that Mr. Wallace will do everything in his power, not alone to protect the current prices on the lard and cotton oil now being marketed, but are sure that he will act to prevent the ruinously low prices which characterize today's markets, from being continued as the all-season price at which our cotton planters and hog raisers would be forced to sell the entire crop of cottonseed and hog lard now coming into production.

"It was because of these facts," continued Mr. BOYKIN, "that I wrote Mr. Wallace, at the request of a large group of Senators and Representatives, asking him to stabilize the prices in the domestic markets.

"We have asked that he do this at once and to stabilize these prices at some figure or price that will not alone protect the current price structure but also the prices which, in the future, will be paid for the cottonseed to be sold by our farmers in the coming year. As I stated before, this year's picking is now estimated to begin in Texas in from 2 to 3 weeks.

"It is needless to point out," said Mr. BOYKIN, "that if something is not done and done now, our planters will enter upon this year's cotton-picking season with 'wagon seed' selling at $10 per ton or at far less than half of the partly price of $28.86 per ton, figured for cottonseed in the month of April."

Mr. BOYKIN stated that in his letter to the Secretary, he pointed out that the ruinous prices now prevailing for lard were not due to any large stocks of lard on hand, but, on the other hand, he stated the entire stock of lard now on hand in the United States did not equal the domestic consumption of lard in the first quarter of the current year.

"Neither are the low prices being paid, due to increased imports of edible oils; imports in the first quarter of this year were for 60,000,000 pounds less than in 1939, while the exports of edible oils totaled nearly 36,000,000 pounds, as compared with the 8,000,000 pounds 'exported' in the first quarter of last year."

Mr. Boykin cited facts and figures to show that the farmers in the South and the West were bearing the entire loss in this price decline, and quoted statistics to show that "loose lard" and "cottonseed oil" had declined as much as a cent in the last 30 days, while the price of "shortening" made from cottonseed oil still remains the same in the New York market now as it was a month ago.

He explained how the Commodity Credit Corporation had saved the naval-stores industry from a similar plight several years ago, and in doing so had shown a profit of more than $670,000 to the Federal Government by the orderly marketing of the naval-stores product which it acquired at that time.

He stated that in behalf of his congressional conferees he had asked that the Secretary make use of that same remedial measure, pointing out that all of the lard in the United States today could be purchased for less than $15,000,000 and that the transaction would not cost the Federal Government the loss of a single penny but would show a profit above all costs.

Declaring oils and fats to be the tenth greatest industry in the United States, Mr. Boykin concluded by saying:

"Such action by the Government would save the loss of millions of dollars to the income this year of the domestic producers of America's oils and fats."

UNITED STATES DEPARTMENT OF AGRICULTURE,
Washington, D. C., May 29, 1940.

PURCHASES OF PORK PRODUCTS FOR RELIEF USE REACH TOTAL OF 88,600,000 POUNDS

Purchases of lard and pork products for domestic relief distribution reached a total of 88,600,000 pounds, with the buying yesterday of 32,000,000 pounds of lard and 15,000,000 pounds of salt pork, the Department of Agriculture announced today.

Previously under the program, which was authorized last December, 41,600,000 pounds of lard and pork products had been purchased. Commodities bought are used by the Federal Surplus Commodities Corporation for distribution through the States to families on relief and for use in school-lunch programs.

Additional purchases of smoked-pork products will be made within a few days on offers which are now being received at the F. S. C. C. Invitations for the trade to submit further offers for sale of lard and salt pork will also be sent out by the F. S. C. C. in the immediate future. It is probable that additional purchases will be made when these offers are received.

The current purchases are expected by officials of the Department to prove of assistance to hog producers in helping to improve market conditions.

Lard and pork products are also being moved to relief families through the Department's food order stamp program. Up to May 1, about $2,500,000 worth of the blue surplus stamps distributed under this program had been used for the purchase of pork products. Since December, approximately 30 percent of all the surplus stamps have been spent by participating families for lard and pork. It is anticipated that about $25,000,000 will be spent for pork products under the stamp plan during the fiscal year beginning July 1.

And Now the Militia

EXTENSION OF REMARKS
OF
HON. ROBERT A. GRANT
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 4, 1940

EDITORIAL FROM THE CHICAGO TRIBUNE

Mr. GRANT of Indiana. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Chicago Daily Tribune of June 3:

[From the Chicago Tribune of June 3, 1940]

AND NOW THE MILITIA

The President has asked Congress for authority to call the National Guard and the reserves into active service at his discretion. The request was buried at the end of his latest message to Congress seeking another billion dollars for the Army and Navy. It is noteworthy that everything in the message except the request for authority to call the militia had been foreshadowed in White House announcements. Why a matter of such great importance was kept from the country as long as possible is Mr. Roosevelt's secret.

The parallels with 1914–17 are striking. Just as then, so now the rearmament program has been made the occasion for attempting to induce a war fever in the country. Mr. Roosevelt need not have made his melodramatic appearance before Congress on May 16 nor to have followed that with a suplementary demand for further armament credits as if the whole bill could not have been presented at once. He knew that Congress and the country were in full accord with him on the need for preparation. The most plausible explanation of his conduct was his desire to create the impression that the country is in great and growing danger of invasion and thus prepare the people mentally for participation in the war in his third term.

He has, of course, denied that his object is war, but so did his political mentor, President Wilson, in similar circumstances. Now he has followed Mr. Wilson again in preparing to call the National Guard. Mr. Wilson intimated, and it was true, that a plot was being hatched in Mexico to invade this country and it was therefore necessary to send the militia to the border. Mr. Roosevelt offers only the vaguest explanation of his request. Units of the guard may be required, he says, "to maintain our position of neutrality and to safeguard the national defense." The words can mean anything or nothing.

Mr. Roosevelt has already sent Sumner Welles, his Colonel House, to Europe to consult the heads of state in the various countries. On Washington's birthday in 1916 Colonel House had drawn up a memorandum in the British foreign office pledging American support for the Allies if it was needed. Nobody in this country knew about that secret agreement except Mr. Wilson. He accepted it as a statement of his policy, inserting only the word "probably" to qualify the commitment. As soon as the political conventions in June were out of the way he sent the National Guard to the border. He campaigned for the Presidency as the man who had kept us out of war. Five months after his reelection and less than a year after the move to the border war was declared.

Mr. Wilson, in 1914, had opposed making long-term loans to the Allies, but eventually changed his policy and permitted them. Mr. Roosevelt, who had been enthusiastic for the arms embargo, similarly changed his mind and demanded and obtained its repeal.

The parallel all along the line is close. The inference that Mr. Roosevelt is playing Mr. Wilson's game is difficult to avoid. Why did he avoid stating precisely why he wants the right to summon the Guard? It is to be hoped and expected that Congress will insist upon an answer before any such authorization is granted. If Mr. Roosevelt knows of any great danger immediately impending he has no right to keep the facts to himself. The country should

share the knowledge if only that it may be mentally and emotionally prepared for eventualities.

The people of this country want to stay out of the war. More particularly, they do not want to be led, blindfolded, into another military adventure in Europe. As long as Mr. Roosevelt refuses to tell why he wishes the power to summon the Guard, the duty of Congress is to withhold the authorization. If the danger is real, Congress will not hesitate to act.

Trade Agreements and the Balance of Trade of the United States, 1934 to 1939

EXTENSION OF REMARKS

OF

HON. VINCENT F. HARRINGTON

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 30, 1940

Mr. HARRINGTON. Mr. Speaker, 3 or 4 years ago one of the chief criticisms against the trade-agreements program was that through and because of it the United States was losing its so-called favorable balance of trade. Critics complained that we were buying more than we were selling. According to opponents, this condition was of serious consequence. When the excess of exports over imports in 1938 showed up to be more than a billion dollars, these critics were embarrassed and had to change their tune. That tune quickly shifted to the contention that the only reason we had a so-called favorable balance was the fact that we were exporting large quantities of so-called war materials, and they made their own classification of what constituted war materials.

It is true that the United States has and is exporting materials which are used in conducting war operations, but it so happened that in 1938 the exports of agricultural products were valued at the highest figure since 1930. Consequently that situation spoiled their export-of-war-materials story, but during the recent hearings on the extension of the Trade Agreements Act it was revived again. Whatever war or other materials are sold by the individual businessmen of this country are presumably being sold in accordance with laws passed by Congress, including the revised neutrality law, which I opposed. This selling of materials which may be used in warfare is being done, and would have been done, quite apart from any trade agreements. Those who attempt to connect this program up with the direct sale of war materials are doing so because they have such a weak case against trade agreements themselves.

Now, the European countries are not purchasing enough of our agricultural surpluses to suit me. And there have been some complaints against trade agreements, because through them foreign countries, which granted us concessions on certain products, are not forced to buy from us. Under this program we do not agree to buy a single pound of anything, nor do we usually ask the foreign countries to make such guaranties to us. Both contracting governments agree to lessen artificial trade barriers so that the business people of each country may more easily carry on commerce and trade. There is no forcing in either direction. The English and French, however, have undertaken to maintain, as far as possible, purchases of American agricultural products.

The following table gives the imports and exports and excess of exports over imports for the years 1934 to 1939:

[000,000 omitted]

	1934	1935	1936	1937	1938	1939
Exports	$2,133	$2,283	$2,456	$3,349	$3,094	$3,177
Imports	1,655	2,047	2,423	3,084	1,960	2,318
Excess exports	478	236	33	265	1,134	859

It will be noted that the excess in exports over imports—although too much emphasis should not be placed on this condition—for 1939 was more than $800,000,000. A recent issue of the Journal of Commerce had the following to say regarding the size of this excess of exports and the necessity for importing products:

> It is apparent that our favorable trade balance is still so large as to reassure those fearful of a flood of foreign imports stimulated by currency depreciation abroad. In fact, it is large enough to make clear that, over the long run, something must be done to establish a better balanced foreign trade, either through a further increase in imports or through a curtailment of our exports that will be enforced by means of additional trade restrictions that other countries will impose upon purchases here by their nationals.

The excess of exports over imports for the first quarter of 1940 was twice as great as it was in 1939. Possibly the answer is that more and deeper cuts will have to be made in industrial tariffs so that such imports may enter in larger quantities.

The National Defense

EXTENSION OF REMARKS

OF

HON. ROY O. WOODRUFF

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, June 3, 1940

Mr. WOODRUFF of Michigan. Mr. Speaker, to achieve a national defense we have vastly more to do than merely to have Congress appropriate large sums of money. No greater mistake could be made than to deceive the people of this Nation into believing that we have made any real strides toward the building of an adequate national defense merely by congressional appropriations of money. That is a necessary first step only. After that we need a group, or preferably an individual, of great executive ability to guide the construction of the national defense in order to be sure we shall get what we pay for, and that our defense when built will be the most practical, the most effective, and the most economical defense we could get.

As Col. Charles A. Lindbergh so forcefully and ably said over the radio recently, we must have a definite and clear-cut foreign policy—with regard both to countries of the Old World and the countries of the Western Hemisphere; we must follow that policy by working out an intelligent program based upon a clear concept of what our defense objectives are.

As was declared this week by the Republican minority leader, JOSEPH W. MARTIN, Jr., of Massachusetts, the Republican Party can be depended upon to give full cooperation in those things necessary for our safety and our welfare.

The danger which threatens us is too imminent to tolerate either party politics or inefficiency. As has been pointed out in the past week, there has never been a time in our history when we need the two-party system more than we do today. Destruction of this system, which provides checks in our Government, might well lead to the loss of our liberties and our security. There is no emergency of sufficient gravity to warrant abandonment of the two-party system.

There must be a cleaning out of subversive forces in the United States which otherwise might be able to sabotage to a very great degree our efforts to build an adequate national defense. Self-preservation demands that we move promptly, fearlessly, and vigorously to get rid of any "fifth columnists" in the United States.

Unification of effort and the elimination of sectional, class, and partisan prejudices and frictions do not at all mean the abolition of the two-party system in our constitutional Republic. Constructive criticism is an essential in the construction of a practical, economical, and adequate national defense. Without constructive criticism there would exist grave danger that we might in a critical moment awaken to the fact that fatal

mistakes had been made in the creation of our national defense, and we might discover such things when it would be too late to rectify those mistakes. That has been our experience in the past. Constructive criticism is highly desirable; prejudice, or merely political criticism, is to be decried.

The time has come in the United States of America when we must, as one united people, as a united free people, proceed to the vitally necessary business of creating a defense adequate to protect the Monroe Doctrine. We must create a defense that, if the occasion arises, will meet any enemy of the future either on the far shores of the Western Hemisphere or a thousand miles out at sea. In order to do this, in order to accomplish these objectives, it probably will be necessary for us not only to enter into treaty agreements with the other nations in the Western Hemisphere to provide naval and aircraft bases in those countries, but perhaps to bear a greater or less degree of the expense of building those bases.

There is no point in indulging in political incriminations and recriminations at this time. The job of making America safe lies before us. Not only must we accomplish that in the time left to us, but we must not hesitate to tax ourselves to pay, at least in part, for the creation of that defense. No fair-minded man or woman can for a moment tolerate the policy of leaving to our children and our children's children an intolerable burden of debt for our security, to be added to whatever financial burden may confront them in their day for their defense.

Only those who have lost faith in a constitutional republic can believe that a country with the riches and resources of this country and a people with the ingenuity, the intelligence, the capacity, and the ability of American people will fail to create a defense adequate to protect our constitutional form of government and the Bill of Rights. We can. We will.

Alleviating Popular Fears—Maybe

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 4, 1940

EDITORIAL FROM THE JACKSONVILLE (FLA.) TIMES-UNION

Mr. REED of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Jacksonville (Fla.) Times-Union (independent Democrat) of April 30, 1940:

[From the Jacksonville (Fla.) Times-Union of April 30, 1940]

ALLEVIATING POPULAR FEARS—MAYBE

Action by Congress in going far beyond Budget estimates in appropriations indicates strongly the inability of the Members to say "no" in the matter of continued excessive expenditures during an important election year. But Senator HARRISON, chairman of the Senate Finance Committee and a stalwart guardian of the Treasury, has no intention of letting the public mind dwell too much on the subject. Not if he can prevent it.

The Mississippian, after a conference with the President, tells the people that the Chief Executive, speaking as the head of the Democratic Party, has passed along definite and positive orders that the Congressmen must take their hands out of the pockets of the taxpayers. The assumption is that the Senator and the President have put their heads together for the purpose of deciding that this shall be a taxless session of Congress.

How this is to be accomplished is a matter yet to be worked out, so far as the collective taxpayer is concerned, for Mr. Roosevelt informed Congress in the beginning that if his Budget estimates were not followed it would be necessary to provide additional revenue by adding to the tax levies.

Despite the warning and regardless of failure by Congress to heed the President's advice, however, the national legislators are not blind to the political sagacity of taking the taxpayer's shirt without telling him all about it. They will go ahead with the expenditures, which since last June have amounted to $7,000,000,000, more than $2,000,000,000 in excess of Government collections, and let the increasing public debt take care of the situation. The taxpayer's shirt will disappear later in the cumulative taxes and interest which will be inevitable from the course that is being followed.

What the President and Senator HARRISON have done, therefore, is enter into an agreement whereby the Executive tells Congress to proceed with its program for spending, postpone the enactment of an inclusive tax bill, and the administration will take care of the situation through its bookkeeping department.

But don't let the public be kidded into thinking that it will not feel the burden, for everything that Congress spends the people must put up. Spending now and taxing later merely mortgages the future.

The question thus posed, How much more debt can the Nation stand, is answered by the First National Bank of Boston in these words:

"In the final analysis, debt capacity of a nation is fixed by the ability and willingness of the people to meet the accumulated bills through taxation. When the point is reached that it is impossible for a government to bridge the gap between income and outgo by means of taxation or through borrowing, then the only course is repudiation or starting the printing press."

For those who advocate high taxes as a means of distributing wealth and spending the Nation into greater prosperity, attention is called to the fact that already Government is taking 25 percent of the national income. It should be obvious that the more Government takes the less there is left for living expenses, and to provide for future requirements. National wealth is increased by producing more goods and more services, not through distribution in high taxes which limit private enterprise and curtail the possibilities of relieving unemployment.

Federal Housing Administration

EXTENSION OF REMARKS

OF

HON. JAMES SECCOMBE

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 4, 1940

LETTER FROM A CONSTITUENT

Mr. SECCOMBE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from one of my constituents:

ALLIANCE, OHIO, *May 11, 1940.*

Hon. JAMES SECCOMBE,
Congress of the United States,
House of Representatives, Washington, D. C.

DEAR MR. SECCOMBE: I am writing you as to how very dishonest I was taken by the F. H. A. As they started out I was to have a home like the Rock of Gibraltar, but it ended up not a good chicken coop. It was started in October, the fall of 1937—not finished until the first of May 1938. When I moved in it was just a small five-room one-floor plan. It took them that long to build it, and the man that did the plastering told me, after they had the plaster mixed it froze and they just thawed it out and put it on. After we moved in the plaster fell off of every room. They patched it up and it did the same, and as it rained it came right through the walls in every room just like a sieve. As there wasn't even any paper or anything back of the shingles—and they guaranteed a dry-sealed basement—the water came in from all sides of the wall even up through the cement floor, so much that it would be so deep it would get into the ash bed of the furnace.

I lived in the home 2 months and they didn't do one thing for me. All of that time they didn't even put in the window that was out when I moved in.

And I took care of everything in the financing of it as it came along just as I was supposed to. Until I moved in from then on I did just as the officer of the Mount Union Bank, where the loan was made, and the F. H. A. man from Cleveland said. No more payments from you until they make the home livable which, of course, they didn't do or wouldn't do.

I think they thought by me being a poor widow they could just do anything and I would have to take it. God only knows I have taken more than I can endure as it has gotten the best of my health by living in such a cold wet home for 2 months. I was in bed with rheumatism most of the summer.

Then after I moved out they wanted to set aside $60 to patch it up, and when we met out there the F. H. A. man from Cleveland, the attorney, the bank officer, and the contractor, this was what was said. The contractor says, "Oh, I will put this house in repair and keep it in repair if it is 5 years from now." The F. H. A. man said, "I just came from Youngstown, Ohio, where a house went to

pieces, and we can't even find the contractor," and he said this house should have never passed inspection; and who knows if it ever was inspected? I don't.

They sent two men out from Cleveland last summer to see me, and they said they couldn't even find the specification of the house in their Cleveland office, something wrong somewhere, and you should be taken care of honestly and with interest on your loss, but we can't do anything; it will have to be taken care of from Washington.

I had put $1,642.28 in that home, and why should I lose this through such dishonesty?

I have been honest in every respect to everyone, and I expect the same in return.

It seems as though the officer at the Mount Union Bank wanted me to take the rap. These are the very words he said to me: "The least you could do, Mrs. Buttermore, is stay in the home and let us quietly sell it so it won't reflect on the bank or the F. H. A." Now, I just want you to weigh that statement.

The house was sold for what the F. H. A. had in it, $4,000, and I am the loser. Is there any justice for me?

I just can't write everything as I could tell it as to what was done and said to me.

But I am certainly entitled to my great loss with interest.

Hoping I will get it very soon, as I surely and truly am in need of it,

Yours very truly,

Mrs. GAY BUTTERMORE,
Alliance, Ohio.

The Unfairness of Our Treatment of Puerto Rico

EXTENSION OF REMARKS
OF
HON. FRED L. CRAWFORD
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 30, 1940

Mr. CRAWFORD. Mr. Speaker, we now learn that the Federal Government, in prosecuting the former assistant administrator of the Puerto Rico Reconstruction Administration and the M. A. Long Co., a Baltimore reconstruction concern, has obtained a verdict of guilty of conspiracy to defraud the Government.

At the request of Bernard J. Flynn, United States attorney, the former assistant administrator's bail was increased from $3,000 to $5,000, pending the motion for a new trial. It is reported in one of the Baltimore daily newspapers that Wilbert McInerney, counsel for the former assistant administrator, told the jury—

If you were brought here to judge whether the Puerto Rico Reconstruction Administration did an efficient job or not, I'd like to pull up another chair and sit in on your side.

Because, if the Government set out to prove that the Government was inefficient, it did a swell job.

If the Government were half as careful about spending money as it is about collecting it, we'd pay a lot less taxes.

The same newspaper further reports that Mr. McInerney, in commenting on the question of errand boys drawing salaries at $5,200 and $6,500 a year, said:

This will shock you people here in Baltimore—shock you into insensibility. I don't say it is right; it may be wrong. Over in Washington we've gotten pretty blase about it all.

We learn from newspaper reports that Bernard J. Flynn, United States attorney, in commenting on the case at the close of the proceedings, described it as "the most important case since I've been here."

When one carefully studies the startling testimony submitted to the legislative and appropriating committees of the House by Representatives of the Government, including Administrators and Assistant Administrators of the Puerto Rico Reconstruction Administration, employees and Federal investigators, as well as other witnesses, more or less familiar with the sordid administration of this Government undertaking in Puerto Rico, the final result of the Government's case in Baltimore is not very surprising.

In order to continue a study of the Puerto Rico Reconstruction Administration, I wish to submit a statement released by W. D. Leahy, Governor of Puerto Rico and present Administrator of the Puerto Rico Reconstruction Administration, under date of May 28, 1940. Governor Leahy said:

At a time when the interests of the American people are diverted by alarming international events, the House of Representatives has proceeded to cut in half the $7,000,000 authorized by the Bureau of the Budget for the continuation of needed rehabilitation work in the most densely populated and most distressed agricultural area under the American flag. This area happens also to be one of the United States most strategic outposts for defense.

The Puerto Rico Reconstruction Administration, which is receiving this cut in needed moneys, has during the past years made a valuable contribution, not only to the relief situation in Puerto Rico but in providing facilities for an improvement in the standard of living of the distressed people of the island. Incident to emergency relief purposes, the P. R. R. A. has made investments in permanent reconstruction assets. These investments now have a value of approximately $20,000,000, a large part of which is self-liquidating and will be returned to the Treasury of the United States.

If the present appropriation cut is allowed to stand, it will result in the discontinuance of rural-rehabilitation activities which now are being conducted by the P. R. R. A., and will have the immediate effect of adding approximately 8,000 persons to the already swollen unemployment rolls.

Inasmuch as Puerto Rican families average five persons, this step will add about 40,000 persons to relief rolls. A cessation of rural activities at this time will mean the abandonment of work already commenced and will result in a definite loss to the investment already made by the United States Government. In my opinion, these investments should be protected.

Of even greater importance than the immediate results would be the set-back to a program which was designed to provide long-range permanent rehabilitation for this island, which, in 42 years of American occupancy, has been the recipient of many unplanned and spasmodic efforts that provided needed temporary relief but did little or nothing permanently to correct unsatisfactory conditions.

I am entirely satisfied with the manner in which the P. R. R. A. is functioning at the present time. Under a competent management, which includes agricultural and marketing experts, it now is one of the leading forces that are trying to build up a sounder economy in the island.

Now, let us look at what the Governor has to say. When the Governor refers to our attention having been diverted by alarming international events, I wish to point out to him that at least two committees of the House have been giving some very serious consideration to the program, which has been followed by the P. R. R. A. in Puerto Rico. The Governor should keep in mind that at no time are foreign affairs more important to our people than domestic problems. Puerto Ricans are citizens of the United States. The record is very clear to the effect that the House and the Senate have acted too hastily and without giving proper consideration to the rights of the Puerto Rican people. Subjecting the Puerto Ricans to bureaucratic control and to dependence upon Government checks released through the office of the Administrator of the P. R. R. A. is as unfair a program as our Government could possibly impose upon the people of that island. On the other hand, protecting their industries and giving them the opportunity to work in private industry would, above all other things, preserve their independence, strengthen their moral characters, and make them proud of the continental United States and the form of government under which they reside.

If Puerto Rico is the most distressed agricultural area under the American flag, it is because the Congress, following to a considerable extent the recommendation of former Administrators of the P. R. R. A., has made it so. The fact that the island now becomes one of the most strategic outposts for defense is no reason why private industry should be destroyed, and it is no justification for the conversion of the island and its people into a collectivist state under the supervision of the present or some prospective Administrator of the P. R. R. A.

The Governor, in his statement, emphasizes that, "at the present time, under a competent management, which includes agricultural and marketing experts, it now is one of the leading forces." Since when has the Governor materially improved the management in charge of P. R. R. A. administration? It is in keeping with the facts to say that

the Governor, burdened as he is with naval and military defense problems, has not yet had sufficient time to fully comprehend the agricultural and industrial problems of Puerto Rico, as they relate to New Deal legislation and the operations of the P. R. R. A. The Governor has not yet had sufficient time to familiarize himself with the actual operating facts pertaining to the financial, industrial, and agricultural problems involved in the more than $135,000,000 of relief money—not including benefit payments—made available to the island in recent years by the Congress and the Federal Treasury.

Furthermore, it is reasonable to assume, for the purpose of this discussion, that if the national and international military and naval emergency, which has been pointed out by the President, is to materialize, that the Governor will, without too much delay, be removed from his present position as Governor of Puerto Rico. He is too valuable a naval expert to be kept in such a position, which demands perhaps as much as any other similar problem, a strictly business administrator. I personally regard his naval abilities so highly that the President could, in my opinion, well afford to permanently transfer the Governor back to the United States where his technical knowledge and experience could be made available to all of the citizens of this country.

If the Governor has, in recent weeks, changed the management of the P. R. R. A., the Congress should, in the light of recent testimony placed before the committees, be given detailed information pertaining to the changes made.

In no way has the Governor justified the reinstatement of the $3,500,000 which he has requested, I am informed, the Senate to include in the Senate bill so that $7,000,000 may come back to the House for confirmation when the conference report is considered.

Effect of Poll Tax on Election Figures

EXTENSION OF REMARKS

OF

HON. LEE E. GEYER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 4, 1940

Mr. GEYER of California. Mr. Speaker, in presenting poll-tax election figures I have been told that due to one-party supremacy in the poll-tax States election figures mean little; and that one must go to the Democratic primaries to find the true number of voters. I have, therefore, made a study of primary figures on the attached chart, which I ask to have extended in the RECORD. This covers the last three primaries in Georgia. I will present other States later.

It shows:

First. The poll tax cuts down the electorate, even in primaries, by two-thirds. Thirty-two thousand and seventy-nine persons voted in the average Georgia primary. Over 100,000 persons, more than three times as many, voted in the average non-poll-tax election.

Second. Six of the thirty successful primary candidates polled under 15,000 votes. Yet 256 non-poll-tax Congressmen each received over 45,000 votes in the last election.

Third. Thirteen of the thirty Democratic primaries in Georgia were uncontested. In 18 of the 30 elections there was not one opposition vote.

Fourth. Only 17 percent of the white population voted in the average Georgia primary. Yet 36 percent of the entire population voted in the non-poll-tax district election—more than twice as many.

Georgia Democratic primaries

District	Population	Votes cast and percent of 1930 population voting compared with elections and with other States												Vote for winner of election			
		Total primary vote				Vote for successful primary candidate				Tota election vote

T. V. A. Tax Replacements

EXTENSION OF REMARKS

OF

HON. B. CARROLL REECE

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 4, 1940

Mr. REECE of Tennessee. Mr. Speaker, I think the Republican members of the House Military Affairs Committee are in a very inconsistent position as the result of voting with certain Democratic members of that committee to table all bills relating to the replacement of taxes lost by certain counties in Tennessee, Georgia, Alabama, North Carolina, Kentucky, and Mississippi, on account of the purchase of electric-power properties by Tennessee Valley Authority previously owned privately and subject to taxation.

One of the bills which was being considered by the committee was Senate bill 2925, passed by the Senate without a dissenting vote on April 30, 1940, and referred to the House Committee on May 1, 1940. The Senate bill is substantially the same as H. R. 7424, which was referred to the House committee on July 31, 1939.

I have been informed that certain members of the House committee who voted to table the bills were of the opinion that the county taxes should be replaced but that the State taxes should not, and it was impossible for the committee to agree upon a bill providing for county replacement only.

The said Senate bill provides for full county replacement but only a small part of the State taxes lost in all of the States except Alabama would be replaced. Alabama collects substantially all its taxes which are used for school purposes and distributes them to the counties. The Senate bill provides that the taxes lost by the counties shall be paid by Tennessee Valley Authority direct to the collecting agents thereof.

The proof introduced in the hearing before the Senate committee, page 4, shows that the Tennessee Valley Authority estimated that under section 13 of the Tennessee Valley Authority Act of 1933, as now in effect, the States of Alabama and Tennessee will realize the following from the 5 percent provided for:

1940:	
Alabama	$330,000
Tennessee	230,000
Total	560,000
1941:	
Alabama	353,000
Tennessee	280,000
Total	633,000
1942:	
Alabama	374,000
Tennessee	302,000
Total	676,000

This means that it is estimated that the gross receipts of Tennessee Valley Authority for said years will be:

1940	$11,200,000
1941	12,660,000
1942	13,520,000

The proof before the Senate and House committee should conclusively show that Tennessee Valley Authority is collecting from the consumers of its power 12½ percent of the gross receipts, and it will therefore realize and enter upon its books as a trust fund for the affected counties and States:

1940	$1,400,000
1941	1,582,500
1942	1,690,000

Do the Republicans of the House committee think that the Tennessee Valley Authority should not be permitted to at least reimburse the counties when it is collecting 12½ percent of its gross receipts for the purpose of paying the taxes?

Do they think that Fannin County, Ga., which realizes nothing under the present Tennessee Valley Authority Act, and which has lost 70 percent of its revenue, should be required to close its schools and default on its obligations?

Do they think that the counties of Tennessee, 67 of which are affected, such as Polk, which loses 40 percent of its revenue, should also be forced to close their schools and default upon their obligations?

It is argued that the States should not be paid anything, although said 12½ percent is being collected for the purpose of paying the taxes. The States of Alabama and Tennessee are going to be paid said amounts under the present act, the counties which are going to be virtually destroyed will receive nothing under it.

The said Senate bill will not result in full replacement of the State taxes. The county taxes amount to approximately $850,000. The lost State taxes amount to approximately $1,100,000. The percentages provided for in the Senate act are: 1940, 10 percent; 1941, 9 percent; 1942, 8 percent; 1943, 7½ percent; 1944, 7 percent; 1945, 6½ percent; 1946, 6 percent; 1947, 5½ percent; 1948 and each year thereafter, 5 percent, the percentage in the act at present.

THE TENNESSEE VALLEY AUTHORITY IS COLLECTING 12½ PERCENT

Many east Tennessee counties will be seriously affected if my fellow Republicans do not assist us in at least replacing the county taxes. My colleague, Representative JENNINGS' district will be most seriously affected. There are at least one-half of the seriously affected counties in Tennessee which are Republican. Many of the others have strong and active Republican minorities. The State as a whole is, of course, normally Democratic.

I favor the passage of the Senate bill and think that the House committee should immediately meet and reconsider its action in tabling the bill. If the House committee does not think any State taxes should be replaced, then a bill providing for only county replacement should be reported and the House given an opportunity to decide the dispute.

In an effort to give expression to the view entertained by some that payments should be made to counties only, I prepared the following amendment and handed it to members of the committee when the matter was under consideration:

A bill to amend the Tennessee Valley Authority Act of 1933

Be it enacted, etc., That section 13 of the Tennessee Valley Authority Act of 1933 be, and the same is hereby, amended to read as follows:

Subsection A. In order to render financial assistance to those county governments in States in which the power operations of the corporation are carried on and in which the corporation has acquired properties previously subject to State and local taxation, the board is authorized and directed to pay to the counties therein in which such properties are held, as and in the manner hereinafter defined and provided, for each fiscal year, beginning July 1, 1940, the following percentages of the gross proceeds derived from the sale of power by the corporation for the preceding fiscal year as hereinafter provided, together with such additional amounts as may be payable pursuant to the provisions hereinafter set forth: For the fiscal year (beginning July 1) 1940, 10 percent; 1941, 9 percent; 1942, 8 percent; 1943, 7½ percent; 1944, 7 percent; 1945, 6½ percent; 1946, 6 percent; 1947, 5½ percent; 1948 and each fiscal year thereafter, 5 percent. "Gross proceeds," as used in this section, is defined as the total gross proceeds derived by the corporation from the sale of power for the preceding fiscal year, excluding power used by the corporation or sold or delivered to any other department or agency of the Government of the United States.

"The payments herein authorized are in lieu of taxes and shall constitute a charge against the power operations of the corporation, and the corporation in fixing its wholesale power rates shall include charges for operating maintenance and depreciation of the power portion of the corporation's property, also an amount sufficient to amortize the investment in power in line with the Authority's program, and in addition thereto shall charge 12½ percent of said wholesale rate, which shall be earmarked and set aside to the extent necessary for payment of the amounts provided herein for tax replacement. The balance of said 12½ percent, after making tax replacements in accordance with this section, shall be turned over to the Federal Treasury as are other surplus funds of the Authority. The Authority shall not lengthen or extend the period for amortizing the investment in power as now set up and provided for. The corporation, the property, and income are hereby expressly exempted from taxations in any manner by any State, county, municipality, or any such divisions and districts thereof.

"SUBSECTION B. The payment for each fiscal year shall be apportioned among said counties in said States in the following manner: One-half of said payment shall be apportioned by paying to the said counties in each State the percentage thereof which the gross proceeds of the power sales by the corporation within said State during the preceding fiscal year bears to the total gross proceeds from all power sales by the Corporation during the preceding fiscal year; the remaining one-half of said payment shall be apportioned by paying to the said counties in each State the percentage thereof which the book value of the power property held by the Corporation within said State at the end of the preceding fiscal year bears to the total book value of all such property held by the Corporation on the same date. The payments herein provided for the various counties in each State shall be apportioned by paying to each county the percentage of the proceeds for all the counties in the State entitled to an apportionment under the provision of the act in which the book value of the power property held by corporations within each county or the end of the preceding fiscal year bears to the total book value of all such property held by the corporations in all the counties in the State entitled to an apportionment hereunder on the same date. The book value of power property shall include that portion of the investment allocated or estimated to be allocable to power: *Provided*, That the minimum annual payment to each county shall not be less than the 2-year average of the State and local ad valorem property taxes levied against power property purchased and operated by the Corporation in said county plus reservoir lands related to dams constructed by or on behalf of the United States Government. The said 2-year average shall be calculated for the last 2 tax years during which said property was privately owned and operated: *Provided further*, That the minimum annual payment to all the various counties in a State in which the Corporation owns and operates power property shall not be less than $10,000 in any case. The determination of the Board of the amounts due hereunder to the respective counties shall be final.

"SUBSECTION C. The payments above provided shall in each case be made to the counties not later than July 31 of each year. The said payments shall be made direct to the counties to the extent that full replacement of taxes as defined in subsection (b) hereof to said counties is made.

"SUBSECTION D. The Corporation shall, not later than January 1, 1945, submit to the Congress a report on the operation of the provision of this section, including a statement of the distribution to the counties of the State hereunder; the effect of the operation of the provisions of this section on State and local finances; and appraisal of the benefits of the program of the Corporation to the State in which the counties thereof receive payments hereunder, and the effect of such benefits in increasing taxable values within such States and counties; and such other data, information, and recommendations as may be pertinent to future legislation.

The Librarian's Profession

EXTENSION OF REMARKS

OF

HON. ALBEN W. BARKLEY

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Tuesday, June 4 (legislative day of Tuesday, May 28), 1940

ARTICLE BY ARCHIBALD MACLEISH

Mr. BARKLEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "The Librarian's Profession," written by Mr. Archibald MacLeish, and published in the Atlantic Monthly of June 1940.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

OF THE LIBRARIAN'S PROFESSION

(By Archibald MacLeish)

Nothing is more difficult for the beginning librarian than to discover in what profession he is engaged. Certain professions define themselves. Others are defined by those who practice them. The librarian's profession is of neither nature. A librarian is so called not for what he does, as the farmer who farms or the lawyer who laws, but from the place in which he does it. And the definitions of the librarians, though they are eloquent in describing the librarian's perfections, are reticent in saying what the librarian's perfections are for.

Hugo Blotius, the sixteenth-century librarian of the Hofbibliothek in Vienna, defined his profession by saying that a librarian should be learned in languages, diligent, and quiet—adding by way of reminder to his master, the Emperor, that "if not of noble blood he should be given a title to enhance the dignity of his office." Cotton des Houssayes told the general assembly of the Sorbonne in 1780 that when he reflected 'on the qualifications that should be united in your librarian" they presented themselves to his mind in so great a number, and in such character of perfection, that he distrusted

his ability not only to enumerate but even to trace a true picture of them. Pressing himself to the point, however, the learned orator (who spoke, it should be noted, in the Latin tongue) supplied the following description of the office: "Your librarian should be, above all, a learned and profound theologian; but to this qualification, which I shall call fundamental, should be united vast literary acquisitions, an exact and precise knowledge of all the arts and sciences, great facility of expression, and lastly, that exquisite politeness which conciliates the affection of his visitors while his merit secures their esteem."

One gathers that M. des Houssayes thought well of the librarian's office, but beyond that, and a certain conviction of personal inadequacy, one is little wiser than before. To be at once a profound and learned theologian, the possessor of vast literary acquisitions, the exact and precise master of all the arts and all the sciences, a facile writer and a charming gentleman possessed of that exquisite politeness which wins heads as well as hearts, is to be an unusual and admirable human being—but even to be all these things at once is scarcely a profession.

And yet it is largely in the vein of the orator of the Sorbonne and the librarian of the Hofbibliothek that the profession of the librarian is presented. Modern librarians—perhaps because they do not speak in Latin—have never been as eloquent as Cotton des Houssayes, but even modern librarians write as though the profession of the librarian had been defined when the scholarly attainments and linguistic achievements of the, perhaps, ideal librarian have been described.

The consequence is that the beginning librarian is thrown upon his own resources, upon the dictionary, and upon the familiar sentences of the great founder of the Bodleian Library at Oxford. From Sir Thomas Bodley, besides learning that a librarian should not be "encumbered with marriage nor with a benefice of cure" and that he should be "a personable scholler and qualified, if it may be, with a gentlemanlike speeche and carriage * * * able to interteine commers in aswel of other nations as our owne, with meete discourses for the place," the apprentice librarian will learn that a librarian is a keeper of a library. From the dictionary he will learn that a library is "a large collection of books, public or private." And by his own resources he will attempt to deduce what the keeper of a large collection of books, public or private, may, in actionable and intelligible language, be. Keeper, but how a keeper? Of books—but what, then, in this context is a book?

It is not an altogether simple question, and for this reason there are two meanings of the word "book," and two relations, therefore, between a book and the man entrusted with its keeping. There is one meaning which signifies a physical object made of certain physical materials in a physical shape. There is another meaning which signifies an intellectual object made of all materials or of no materials and standing in as many shapes as there are forms and balances and structures in men's minds. The two meanings overlap and are confused. Readers associate the intellectual book with the physical book, thinking of Plato's vision of the world in terms of dark green linen and a gilded name. Collectors associate the physical book with the intellectual book, imagining that because they possess a rare edition of a poet's work they somehow have possessed the poem. But the two meanings are nevertheless distinct. The physical book is never more than an ingenious and often beautiful cipher by which the intellectual book is communicated from one mind to another, and the intellectual book is always a structure in the imagination which may hang for a time above a folio page in 10-point type with a half-calf binding only to be found thereafter on a different page above a different type and even in another language.

When it is said, therefore, that a librarian is a keeper of books, it must be determined first of which of these two books he is the keeper. Is he, for one example, the keeper of the small, cloth-bound object of 110 pages of text and 6 of front matter manufactured by Macmillan & Co., Ltd., in London in 1928 and called the Tower, by W. B. Yeats? Or is he the keeper of that very different object created in many men's minds before, and now in yours, by this—these words, these symbols, images, perceptions—

> "That is no country for old men. The young
> In one another's arms, birds in the trees,
> —Those dying generations—at their song,
> The salmon falls, the mackerel-crowded seas,
> Fish, flesh or fowl, commend all summer long
> Whatever is begotten born and dies.
> Caught in that sensuous music all neglect
> Monuments of unaging intellect."

It makes a difference whether the book is the cloth and paper or the intellectual image. If it is the physical book of which a librarian is keeper, then the character of his profession is obvious enough. He is a custodian as all keepers of physical objects are custodians, and his obligations are a custodian's obligations. He is a sort of check boy in the parcel room of culture. His duty is to receive the priceless packages confided to him by the past and to redeliver them to the future against the proper stub. To perform that obligation he must be reliable, orderly, industrious, and clever. He must devise infallible and complicated ticket systems to find the parcels on the shelves. He must read the notations of origin and ownership in a dozen tongues. He must guard the wrappers from the risks of time and theft and matches and men's thumbs. He must be courteous and patient with the claimants. And for the rest he has no duty but to wait. If no one comes, if no one questions, he can wait.

But if it is not the physical book but the intellectual book of which the librarian is keeper, then his profession is a profession of a very different kind. It is not the profession of the custodian, for the intellectual book is not a ticketed parcel which can be preserved by keeping it from mice and mildew on a shelf. The intellectual book is an imagined object in the mind which can be preserved only by preserving the mind's perception of its presence. Neither is the librarian's profession the profession of the check boy who receives and guards and redelivers—receives from the past, guards against the present, and redelivers to the future—for the intellectual book is not a deposit of the past which the future has a right to call and claim. The intellectual book is a construction of the spirit, and the constructions of the spirit exist in one time only—in that continuing and endless present which is now. If it is the intellectual book rather than the physical book of which the librarian is keeper, then the profession of the librarian is not and cannot be the neutral, passive, negative profession of the guardian and fiduciary, but must become instead the affirmative and advocating profession of the attorney for a cause. For the intellectual book is the word. And the keepers of the word, whether they so choose or not, must be its partisans and advocates. The word was never yet protected by keeping it in storage in a warehouse: the preservation of the word is now, as it has always been, a cause—perhaps the greatest—not, I think, the least in danger in this time.

It makes a difference, therefore—a very considerable difference in the understanding of the librarian's profession—which of these two meanings of the book is taken. Both are held. The librarian who asserts that the sole and single strength of his profession in a distracted world is its disinterested objectivity, meaning its negative and custodial detachment from the dangers which beset the Word, thinks of the book necessarily as a physical object on his shelves for which, in its intellectual aspects, he accepts no share of risk or credit. The library trustee or the moralizing editor who demands of librarians that they stick to the job of pasting on the labels and handing out the loans, accepts, but with less honesty, the same assumption—less honesty because he speaks, not from love of the librarian's profession, but from hatred of the Word, and fear of its persuasions.

Those who love the power of the Word and who defend it take the opposite position. Shortly after William Dugard was released, through the efforts of John Milton, from Newgate prison, he published two letters by John Dury deputy keeper in 1649 of the King's medals and library, which put the case with eagerness and passion: "For if librairie-keepers did understand themselves in the nature of their work, and would make themselves, as they ought to bee, useful in their places in a publick waie; they ought to become agents for the advancement of universal learning. * * * The end of that imploiment, in my conception, is to keep the publick stock of learning, which is in books and mss., to increas it, and to propose it to others in the waie which may bee most useful unto all. His work then is to bee a factor and trader for helps to learning, and a treasurer to keep them, and a dispenser to applie them to use or to see them well used, or at least not abused."

As between these two conceptions of the profession a man can chocse only for himself and not for those who practice the profession with him. But there are, notwithstanding, certain considerations which even a novice among librarians may propose. The chief of these considerations is the nature of the times in which men live. In a different time from ours—such a time as men a generation ago considered natural and normal—it made relatively little difference whether a librarian behaved himself as a custodian of volumes or as a "factor and trader for helps to learning, and a treasurer to keep them, and a dispenser to apply them to use." A generation ago the word, the life of the mind, the monuments of unaging intellect, were not under attack. It was agreed by all civilized nations, by all governments in power, that the cultural tradition was a common treasure, that truth was an end to be sought equally by all men, and that the greatest glory and final justification of human life was the creativeness of the human spirit. In such a world the librarian who considered himself a custodian, who devoted himself to the perfection of his catalog and the preservation of his bindings, and who waited for the calls of those who had business with his collections, was not only prudent but entirely wise. There was no need for him to advocate the cause of learning or to assert the supreme importance of the contents of his library, for no one doubted the one or challenged the other. The librarian who presented himself in the years before the Great War as a champion of culture would have received the ironic welcome he deserved. What was required of him then—and what he practiced—was discretion, dignity, and a judicial calm.

But the world in which we live is not that world. The world in which we live is a world that world would have believed impossible. In the world in which we live it is no longer agreed by all governments and citizens that truth is the final measure of men's acts and that the lie is shameful. There are governments abroad, and there are citizens here to whom respect for truth is naive—governments and individuals who, when it is proved they lie, have not been shamed "either in their own or in their neighbors' eyes." In

the world in which we live it is no longer agreed that the common culture is a common treasure. There are governments abroad, and there are citizens here to whom the common culture which draws the peoples of the West together is a common evil for which each nation must now substitute a private culture, a parochial art, a local poetry, and a tribal worship. In the world in which we live it is no longer agreed that the greatest glory and final justification of human history is the life of the human mind. To many men and many governments the life of the human mind is a danger to be feared more than any other danger, and the word which cannot be purchased, cannot be falsified, and cannot be killed is the enemy most hunted for and hated. It is not necessary to name names. It is not necessary to speak of the burning of the books in Germany, or of the victorious lie in Spain, or of the terror of the creative spirit in Russia, or of the hunting and hounding of those in this country who insist that certain truths be told and who will not be silent. These things are commonplaces. They are commonplaces to such a point that they no longer shock us into anger. Indeed it is the essential character of our time that the triumph of the lie, the mutilation of culture, and the persecution of the word no longer shock us into anger.

What those who undertake to keep the libraries must consider—or so it seems to me—is whether this profound and troubling alteration of the times alters also their profession. Granted that it was not only possible but desirable for the librarian to think of his profession in negative and custodial terms in the quiet generations when the burning of books was a medieval memory, is it still possible for librarians to think of their profession in these passive terms in a time in which the burning of the books is a present fact abroad and a present possibility at home?

Granted that it was not only prudent but wise as well for the librarian to admit no positive, affirmative duty to the cause of learning in a time when learning was universally honored and the works of great art and great scholarship were admired monuments, is it still wise for librarians to admit no positive duty to learning in a time when governments abroad teach ignorance instead of knowledge to their people, and fanatical and frightened citizens at home would, if they could, obliterate all art and learning but the art and learning they consider safe?

In a division which divides all men, because it is a division drawn through everything that men believe, can those who keep the libraries—those who keep the records of belief—avoid division? In a struggle which is truly fought, whatever the economic interpreters and the dialectical materialists may say to the contrary, across the countries of the spirit, can those who hold those countries remain neutral? In an attack which is directed, as no attack in history ever was directed, against the intellectual structures of the books, can those who keep the books contend their books are only objects made of print and paper?

I can answer only for myself. To me the answer is not doubtful. To me the changes of the time change everything. The obligations of the keepers of the books in such a time as ours are positive obligations because they have no choice but to be positive. Whatever the duty of the librarian may have been in a different world and a more peaceful generation, his duty now is to defend—to say, to fight, and to defend. No one else—neither those who make the books nor those who undertake to teach them—is bound as he is bound to fight in their behalf, for no one else is charged as he is charged with their protection. No one as much as he must say, and say again, and still insist that the tradition of the written word is whole and single and entire and cannot be dismembered. No one is under obligation as he is under obligation to meet the mutilators of the word, the preachers of obscurantism, the suppressors—those who would cut off here and ink out there the texts their prejudices or their parties or their churches or their fears find hateful. And these obligations are not obligations which are satisfied by negatives. The books can be protected from the preaching demagogs and the official liars and the terrorizing mob not by waiting for attack but by forestalling it. If the cultural tradition, the ancient and ever-present structure of the mind, can still be saved, it can be saved by reconstructing its authority. And the authority of art and learning rests on knowledge of the arts and learnings. Only by affirmation, only by exhibiting to the people the nobility and beauty of their intellectual inheritance, can that inheritance be made secure.

Some years before his elevation to the bench Mr. Justice Brandeis referred to himself as "counsel for the situation." The librarian in our time, or so it seems to me, becomes the counsel for the situation. His client is the inherited culture entrusted to his care. He—he more than any other man—must represent this client as its advocate. Against those who would destroy the tradition he must bring the force of the tradition. Against those who would mutilate the monuments he must bring the beauty of the monuments. Against those who would limit the freedom of the inquiring mind he must bring the marvels of the mind's discoveries.

Keepers of books, keepers of print and paper on the shelves, librarians are keepers also of the records of the human spirit—the records of men's watch upon the world and on themselves. In such a time as ours, when wars are made against the spirit and its works, the keeping of these records is itself a kind of warfare. The keepers, whether they so wish or not, cannot be neutral.

A Question Radio Executives Should Ponder Seriously—and Answer Carefully

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 30, 1940

Mr. MUNDT. Mr. Speaker, I am sure that every Member of Congress realizes that the European war has confronted us all with the problem of considering the significance which the unpredictable factor of broadcasting war news has upon the steady nerves and clear thinking which must play an important part in public opinion if America is to make the wisest decisions in the present crisis.

Never before has war with all its horror and hatred been brought into the living rooms of America through the almost universal ownership of receiving sets which now exists in this country. I am sure radio executives are giving constant and careful consideration to the perplexing problem of how far to go in dramatizing over the radio the horrific scenes which are taking place daily in battle-torn Europe. Radio has a grave responsibility, today, to live up to the privileges of free speech and uncensored discretion which it enjoys in America and which it is my personal hope it may always continue to enjoy in this country.

I feel confident that the best guaranty radio can have that its freedom will not be curtailed is to demonstrate clearly in this crucial period that it merits the tremendous responsibilities of self-control which it now enjoys.

WHAT PART SHOULD RADIO PLAY IN REPORTING WAR NEWS?

Mr. Speaker, these remarks are actuated by an editorial clipped from the South Dakota State Forum, published in Sioux Falls, S. Dak., and edited by one of the most capable and best-informed newspaperwomen in my State, Aileen Sessions Tolles. I am reprinting it as a part of my remarks because it is rather typical of many other similar editorials I have noticed in other papers and reflects a concerned state of mind revealed by letters received by many Members of Congress during the past several months and by cloak-room conversation heard in the anterooms of this Chamber almost every day. The editorial propounds a question, Too Much Radio News? which we may not be able to answer, but it is a question which we should not ignore. Letters from frantic mothers whose nerves are keyed to the breaking point by exciting and excitable radio newscasters are reaching Washington, and an emotionally upset citizenry is certainly less well prepared to mend its national defenses and step up production than is a determined and deliberate people.

What part should radio play in reporting the tragedies of a great war? Mr. Speaker, I have no answer to offer to that question but I merely propound it for the serious consideration of us all. I propound it, too, with the fervent hope that radio executives themselves will use increasing care and restraint so as not to permit the splendid convenience of radio to become a destructive wartime device in America. In wartime, I presume radio would be one of the first facilities taken over by the Government and a war involving America might spell the end of private ownership and operation of radio in this country since its influence would be needed in maintaining public morale and solidifying sentiment. Happily, America is not at war and American radio companies are privately owned and operated—incidentally they are now practically unique in all the world in this respect—and they are providing by and large the best radio programs available on the air. It would be most unfortunate if careless or overzealous commentators on the air should misuse their freedom and render such disservice to American

clear-headedness that this country would be forced to pass regulatory legislation circumscribing or censoring radio reporting. I believe the radio executives of this country recognize this danger and are sincerely trying to prevent abuses of their privilege from jeopardizing the advantages which they hold from licenses granting them virtual monopoly over favored air waves.

A CHALLENGE TO THE SELF-RESTRAINT OF RADIO

Mr. Speaker, I have a passionate devotion to the American principle of free speech. But should such freedom, when exercised over air channels which are privately owned and from which others are excluded by governmental regulations, get out of bounds to the detriment of the public morale, it would become a public problem of vital concern to the entire Nation. Wise self-restraint, now, by the radio companies themselves is, in my opinion, a far better solution to the problem of hysterical excesses and unduly exciting and provocative broadcasts than any laws which Congress could devise. Surely such restraint can prevent the necessity of new legislation to meet the problem propounded by the question of what is and what is not public-serving broadcasting of war news.

We can still too well remember the results of Orson Welles' purely fictitious broadcasting of a fanciful invasion from Mars. So real did the highly emotionalized speeches of radio speakers appear that a near-panic developed in many localities in America. Wisely, radio executives themselves took steps to prevent a repetition of such a sensational program to unnerve large portions of the populace. Confronted, too, with the problem of how much emotionalism and hysteria to convey over the air waves in reporting war news, it is my hope these same radio executives themselves, with no legislative stimulus or restraint, will use equal discretion in not permitting factual reporting to be colored by hysterical or emotional commentators whose inflections and intonations can well induce emotional upsets and develop panicky thinking if they carelessly or deliberately engage in all the histrionics of their art instead of functioning simply as reporters of news.

IS RADIO OR ARE CONGRESSMEN AND SENATORS IN ERROR?

That there has already been too much of a tendency to overdramatize war news and to permit apopletic appeals and horrific hysteria to color radio dispatches is evidenced by a study of the pages of the CONGRESSIONAL RECORD itself. On one day last week, I counted references made by more than a dozen Senators and Congressmen to "hysterical radio reporting" which they decried as unfortunate at a time when the people of America need to search their souls and investigate the deepest recesses of their minds to arrive at decisions and conclusions which will best serve democracy and humanity in this dark hour. It does not seem possible that these Senators and Congressmen were all wrong and that radio is all right—radio, itself, should correct the excesses and emotionalism which have given rise to such frequent complaints on the floor of this House.

Newspapers, more experienced in the business of conveying news than are radio chains, are exercising commendable good taste and good judgment in their reports of war news today. Aside from a few rather notorious exceptions, the news is presented without editorial coloration, and the scourge of atrocity stories and horror pictures which prevailed during the World War and preceding our entrance into it have been held down to a minimum. Many papers have even risen to new heights of public service by carrying bylines or boxed notices to the effect that "all news coming from European capitals and battlefields during wartime is subject to censorship at its source." Such frankness and candor on the part of our better-class newspapers is a splendid token of public service and merits the commendation of all readers—it is a fine manifestation of the tradition of freedom of the press which is inherent in this country.

COMMENTATORS CULTIVATE THE "ILLUSION OF INTEGRITY"

On the other hand, especially among radio commentators who inject their personal opinions and emotions into the news, too frequently an attempt is made to create an "illusion of integrity" which leads the unwary listener to believe that what he hears is more factual or fulsome and reliable than what he reads. Obviously, such is not the case because newspapers and radio stations, alike, are limited by the same conditions in foreign countries and all are circumscribed by the same foreign censors and the same propagandists who are in the business of distorting the facts for military or psychological purposes.

THE NEWSPAPERS HAVE A LESSON FOR THE RADIO

Radio might do well to follow the examples of newspapers in reminding their public that all news is subject to censorship at the source and that in wartime it is impossible to discriminate between what is factual and what is pure propaganda in communiques and messages originating from foreign sources. In fact, a few radio programs are already issuing such precautionary announcements in connection with their programs of war news, but too many programs still utilize commentators whose egotism stirs them to try to create an "illusion of integrity" about themselves which, knowingly or unwittingly, tends to give prestige to their remarks which is not merited.

Mr. Speaker, I do not want to conclude this discussion without saying a good word for the fine features of radio war reporting which I wish to commend as frankly as I have criticized the occasional excesses which it is heir to. The nightly round-up of war news from European capitals in which radio reporters from each belligerent country discuss the news which their respective censors permit, is a commendable and serviceable contribution to the group knowledge of America. So, too, are the fine, informative, and factual reports and analyses of N. B. C.'s Major General Fuqua, and of Columbia's Maj. George Fielding Elliott. Without engaging in personal dramatics, and without any hysterics, these two authorities bring to the public regular reports of war movements and developments, and their programs are of a public-serving nature. In contrast with the frequent extremes in excitation engaged in by Columbia's Kaltenborn—and to a lesser degree by N. B. C.'s Baukhage—the previously discussed programs never provoke cloakroom discussions in Congress about the dangers of unlimited radio war news.

A PROBLEM RADIO SHOULD SOLVE FOR ITSELF

The problem of what constitutes public-serving and patriotic use of the radio in broadcasting war news is a difficult one. I confess I have no answer to propose; I leave you with the question before us, and with the renewed expression of hope that America's radio executives will not permit excesses of their freedom of the air to endanger the national welfare. If this country ever goes to war, it must be as a result of serious thinking and deliberate action based on a careful consideration of America's destiny, and not as the result of hysterical and super-emotionalized broadcasting of war news by irresponsible commentators whose desire to create an effect sometimes overshadows their responsibilities to the public which gives them the freedom of expression they enjoy. Such abuses of this freedom not only jeopardizes the status of radio in this country but it puts in jeopardy the destiny of the very country itself.

The following editorial which I have previously referred to raises the question which I have not tried to answer in these remarks but to which those of us in Congress and those who serve as radio executives in America must give increasing thought as the devastating developments of the tragic European conflict become more and more heart-rending day by

day—Too Much Radio News?—an editorial by Aileen Sessions Tolles:

[From the South Dakota State Forum, Sioux Falls, S. Dak.]

TOO MUCH RADIO NEWS?

Is it possible to have too much radio news? We think it is. While we do appreciate the fact that the American people without a doubt are the best informed in the world and that is always to be desired, we also think that the broadcasting companies could be of greater benefit if they gave just one broadcast each per day.

This is not the first time that we have felt there was too much broadcasting on a given subject. When there has been a terrible flood and the newscasts were coming in constantly it had an emotional effect on the listeners that was pitiable. After all, most of us were only observers, nothing we could do, and yet the emotional strain was terrific. So it is with the war—we hear three different stories from three different countries and we wait eagerly for the next broadcast.

Often it has seemed that it is more like watching a moving picture, we hear something and immediately want the next item, forgetting that in war things cannot move with the speed of a movie. We forget that it takes weeks at least to get a large body of troops massed for action and we expect instant news and wonder why this and that has not happened.

We would like to suggest that the broadcasts be given once a day with a summary of the day. That would give the reporters a chance to sort out the important events and we feel it would relieve a great many people from undue emotional strain. Of course one can always turn off the radio, but to many who are in the home all day it is a companion that is essential to their happiness and it is turned on all day.

We think it would help to keep our emotions under control if war news was given less frequently and we did not feel we were watching a moving picture instead of events that may change history for years to come. This is the time for sober thinking and this is almost impossible with the present emotional appeal.

National Labor Relations Board

EXTENSION OF REMARKS

OF

HON. E. E. COX

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 4, 1940

Mr. COX. Mr. Speaker, these are crucial times. Our country faces again the need of taking adequate steps to protect and defend its greatness. As in other critical periods, we all hope and trust that the American people will respond to the exigencies of the times with their customary courage and vigor. Nor will we be disappointed in those of our people who are truly American. We have only to fear the treachery of the few who seem to be determined at all costs to destroy the unity of spirit and effort which have characterized our people.

The Congress is now at work on a program of defense which leaves us no time to waste on preliminaries. The President has called upon labor and industry to join hands with the Government in a project which is worthy of Hercules. We cannot expect to meet the challenge of the times unless we are united and organized, unless we put aside discord and division. We cannot build external peace unless we have peace within us.

This is not an idle warning. In the last few weeks we have seen the consequences of disunion and spiritual unpreparedness in other countries. We have coined new phrases to fit the destructive and subtle weapons with which conquests are now waged and won—phrases such as the "fifth column" and the Trojan horse.

It will not do to say that it cannot happen here. And, worst of all, the treachery from within has not come from our people but from persons who occupy positions of trust and power in our Government, persons who can foment and who have willfully fomented strife and discord among our people.

My sentiments may seem to be strongly phrased. The record of the National Labor Relations Board as it has been presented to this House not only justifies my statements; it calls for the most vigorous denunciation that the tongue of man can devise. This Congress gave being and power to the National Labor Relations Board to the end that national unity might be preserved, that peace between employers and labor might be fostered and improved against the coming of crises such as the one we now face. But despite our expectations we have seen the opposite result, not because the institution which we created was fundamentally wrong but because the instrument which administers it has proved to be corrupt.

The record is so plain that it cannot be questioned. The National Labor Relations Board, despite its extravagant claims to the contrary, has done little to encourage industrial peace. Indeed, the Board and its emissaries have gone about our country raising and breeding discord and differences. The Board has not awaited demands upon its jurisdiction; it has actively solicited—even created—charges against employers. It has planned campaigns to foment strikes, as its tactics before the 1937 little steel strikes will illustrate. It has traded its authority to subjugate employers against promises on the part of labor to support its appropriations. It has gone into peaceful communities and promoted turmoil by hearings prolonged for many months.

The discord which it has created has not been confined to disputes between employers and employees. The Board has turned laboring men against their own leaders to save its own skin, as shown by its efforts to enlist the rank and file of the A. F. of L. in a propaganda drive against reduction of its appropriation and in opposition to amendments to this law recommended by the executive council of the A. F. of L. It has disturbed trade relations between businessmen; by its attempts to place the sanction of its official dignity on boycotts its vengeance has reached into other branches of our Government to bring down punishment on the heads of employers whom it does not like. It has wasted Government funds to encourage people to rally to its defense in Congress; it has vilified State and local police agencies and governmental officials. It has trampled upon the constitutional guaranties of a free press and free speech, and, as I will point out, it has openly defied Congress. In short, Mr. Speaker, there is not a page in the catalog of our social, economic, and political activities on which we cannot find traces of the poisonous activities of this agency. Where Congress intended to create a physician who would heal our industrial ills with soothing remedies, it has discovered that the physician has only a prescription of poison.

This course of the Board, Mr. Speaker, is no series of unfortunate errors. The very philosophy of the Board and its henchmen is a philosophy of hate and discord. Its tactics have been predicated upon the theory—which is contrary to the spirit and purposes of the act—that there can be no peace between employers and labor. In other words, the decisions of the Board are dogma straight from Marx and Lenin. Moreover, Mr. Speaker, the Board's preferences for the teachings of Marx and Lenin are not merely philosophical. The Board's personnel is shot through with active adherents to their doctrines. Its sympathies in the labor movement are with those who support and advocate the totalitarian dictatorship of Stalin.

On the record as we have seen it, I do not see how any person who has at heart the interests of this Nation can defend the Board. To paraphrase a sentence which Cicero used in attacking the treason of Catiline, how long is this Board to abuse our patience?

Mr. Speaker, the American people have become aware that enemies of the best interests of American democracy have seized control of substantial elements of a powerful and militant labor organization, the Congress of Industrial Organizations. These elements have not hesitated to demonstrate their affection for international radical movements—movements which, if not checked in time, may bring this country to the same state of bloody disunion and feebleness in which other democracies have found themselves. We are not unmindful of the part which these elements may play in connection with the vital program of national defense. For ex-

ample, I can refer you to instances which occurred in the 1937 steel strikes. Among other flagrant interferences with law and order, which are common recollection, there was the dynamiting of a water main in Pennsylvania, the stoppage of the United States mail in Ohio. Yet we must remember that the General Staff of the War Department believes that the steel industry must be the industrial backbone of any planned national defense. The tactics of riot and revolution which occurred in the automobile strikes are not forgotten; yet, in the days of mechanized warfare, the automotive industry is scarcely less important than steel. I consider it most significant that shortly after the President had addressed this Congress on the subject of air defense the leader of the C. I. O. announced that his organization was prepared to organize the aeronautical workers. Does this imply that the aircraft manufacturing industry is to be given a taste of the strategy which was used against the automotive and steel industries and which is even now being used to tie up the production of cruisers and destroyers by a strike in one of our shipyards?

On a recent Sunday night the President stated, in his fireside chat, that—

> I am sure that the responsible leaders will not permit some specialized group, which represents a minority of the total employees of a plant or industry, to break up the continuity of employment of the majority. * * *

While the C. I. O. retains some of its present leaders, the President is expressing a forlorn hope. The past experiences of the automotive and steel industries with respect to sit-down strikes, slow-down programs, and production sabotage, to say nothing of acts of violence that have resulted in destruction of vital machinery, show that many members of the C. I. O., so long as they are ruled and led by the subversive agents who are now in their midst, will not hesitate to sabotage defense preparations to further their ends, which are not the legitimate ends of labor but the alien objects of the Communistic front. To prevent the break-down of vital defense preparations in the basic industries which are organized or about to be organized by the C. I. O., such as the steel, rubber, automotive, and aircraft industries, we must destroy the unholy alliance which exists between the radicals of the National Labor Relations Board and the radicals of the C. I. O.

I propose to show you, Mr. Speaker, that the National Labor Relations Board is itself a nest of radicals and subversive thinkers; that there are similar agencies within the Congress of Industrial Organizations, and that between the two groups there is a working arrangement which promises to endanger and defeat the efforts of Congress and of the President to preserve a unity of spirit in our present emergency.

The record of the committee which has been investigating the National Labor Relations Board contains so many instances of subversive tactics and subversive thinking on the part of the personnel of the Board that I can select but a few to illustrate my point.

In many instances, the records of cases before the Board demonstrate the Board's readiness to protect aliens of Communistic tendencies. The members of the Board cannot plead ignorance of this condition. A dramatic illustration of the Board's views is provided by its recent willful defiance of Congress. You will recall that our Committee on Appropriations reduced the appropriation for the National Labor Relations Board and recommended that the reduction be made applicable to the funds designated for the Division of Economic Research.

There is no doubt but that this action of the committee was based upon the findings of the Smith committee that Mr. Saposs, the head of the Economic Research Division of the Board, was of "definite socialistic leanings." In the Senate, the Committee on Appropriations restored a part of this reduction, but subsequently the House and Senate conferees agreed upon the original reduction as proposed by the House. There is no question in my mind but that Congress prescribed the reduction with the specific object of abolishing the Division of Economic Research and the office of the Director. Despite this clear manifestation of congressional intent, the Board proposes to give effect to the reduction by discharging some 50 members of its staff, nearly everyone a good American, and, except for 6, all of whom have nothing to do with Mr. Saposs' activities, so that the Board may retain the services of Mr. Saposs and his henchmen.

This deliberate disregard of the will of Congress is, in my view, conclusive proof of the Board's unfitness for at least two reasons. In the first place, it is another illustration of the Board's policy of hewing to its own philosophy, regardless of the policies of the Congress. In the second place, it shows that the Board itself is openly willing to espouse the radical thinking of its personnel.

If there is any doubt that Mr. Saposs is a subscriber to the communistic dogma that there can be no peace between capital and labor, his own statements will dispel it. While an employee of this Government, in 1935, Mr. Saposs wrote that unless a movement of middle class and workers "is brought into being, capitalism will go marching on with its poverty, misery, and economic insecurity. The time is ripe; have the middle class and workers the will to rise to the occasion?" Another quotation from Mr. Saposs' writings is peculiarly important in our present emergency. In his report of the International Socialistic Labor Congress in Vienna in 1931, Mr. Saposs says:

> The international must take the position that if another war occurs, the workers will destroy capitalism. With that end in view the workers must be prepared to stretch arms across the frontiers in case of war and definitely win power for themselves.

It seems that the views of Mr. Saposs are shared by his staff as well. As late as last summer one of his underlings wrote:

> Have you heard of the news event of last week—about Wolf L.—who received his visa to Russia and is at the present moment on the high seas? I die of envy.

And another:

> I saw the New York World's Fair—the last orgasm of capitalism.

Mr. Saposs is not the only member of the Board's staff who holds to these views. Nathan Witt, secretary to the Board, who has been staunchly defended by Messrs. Madden and Smith, members of the Board, seems to subscribe to the same anarchistic philosophy. The intermediate report of the committee to investigate the Board is well worth reading on the subject of Mr. Witt. It was Mr. Witt who, with the approval of Board Member Smith, worked out with the C. I. O. a plan to entrap Inland Steel Co. into the commission of a violation of section 8 (5) of the act. In this connection, the record in the Inland case makes it worth while to digress for a moment. Before any charge was filed against the company Mr. Witt met with an officer and an attorney for the C. I. O. to work out the union strategy against the company. Witt suggested that the union ask for exclusive recognition and a written contract. Subsequently Mr. Witt described his plan of attack to Board Member Smith, who approved it, and instructed Witt to have the regional director in Chicago prepare a complaint, to be issued as soon as the trap was sprung. The program went through as scheduled, the charge was filed, and a complaint was issued. It is most significant that, contrary to the usual practice, a trial examiner was designated before the issuance of the complaint.

Other examples of Mr. Witt's philosophy might be cited. Like many other members of the Board's legal staff, Witt is a member of the National Lawyers Guild. As such, when the guild was engaged in a controversy over a resolution to condemn communism, nazi-ism, and fascism, Witt battled like a Trojan to prevent the inclusion of communism among the "isms" to be condemned.

The philosophy of discord is not confined to the Board's underlings, as is indicated by the behavior of Board Member Smith. His now famous trip to Mexico City in September 1938 to attend the meetings of the International Industrial Relations Institute provides a demonstration of his views. These meetings were held in conjunction with the International Labor Congress, in which Mr. John L. Lewis of the C. I. O. played a prominent part. The Congress was convened at the request of President Cardenas, and its guiding force was the secretary of the C. T. M., the Confederation of Mexican Workers, which might be described as the Mexican equivalent of the C. I. O. Although Mr. William Green, president of the American Federation of Labor, was invited, he declined to attend, stating:

> I regard it as a meeting of extreme leftists and Communists. We are of the opinion that it is being promoted for the purpose of advancing the cause of communism in Latin American countries.

As a matter of record, the symbol of communism, the hammer and sickle crossed on a red background, was prominently displayed at all of these meetings; spectators could be left in no doubt as to the solidarity of the congress with communism. Yet, as a public official of the United States Government, Mr. Smith attended these meetings, lending them open support by his presence. It is also significant that Mr. Smith was seated on the speakers' platform while the President of Mexico delivered a bitter attack against the policy of the United States with respect to the expropriation of Mexican oil properties. It is also worthy of note that some of the most prominent of the international Communists were active in the Mexican sessions such as Miss Marguerita Nelkin of Spain and Leon Jouhaux, who was subsequently jailed in France as the leader of the Communist Party and also leader of the trade union movement, the destructive tactics of which had dangerously imperiled France's armament program.

Mr. Smith seems to have enjoyed the high esteem of his fellow travelers in Mexico City for he was selected as secretary for the United States of the League Against War and Fascism. It is common knowledge that Mr. Smith's organization, which afterward became known as the American League for Peace and Democracy, was a leading communistic front group. Mr. Earl Browder, for example, praised it as a "transmission belt for communism." As late as January 1939, Mr. Smith was active in its affairs.

I cannot leave the subject of Mr. Smith without a passing reference to his intimate connection with Harry Bridges, the notorious west coast C. I. O. leader, for I have no doubt that Mr. Smith's obvious C. I. O. inclinations were to a large extent the result of his friendship with Bridges. Of Mr. Bridges little need be said. I think that Mr. Green aptly described Bridges' philosophy in his statement that "everyone in the United States knows that Harry Bridges is a Communist except Mme. Perkins and Dean Landis." Bridges' tactics on the west coast are common knowledge. The Board itself was fully aware of this, for in July of 1937 its regional director at Los Angeles wrote to the Board as follows:

> The appointment by Lewis of Bridges as C. I. O. director of the Pacific coast has added fuel to the fire smoldering during the last 6 months. Bridges is undoubtedly one of the most militant labor leaders on the coast and has a concept of national organization which very closely approaches the syndicalistic school. (It will be remembered that syndicalism was the term for communism in the labor troubles of many of the European countries that had to fight off the inroads of the Communist doctrine.) He believes that the control of industry will come through the control of transportation of raw materials flowing into the key industries.

Mr. Smith's connections with Mr. Bridges cannot be questioned. The record shows that Mr. Smith visited Bridges on a trip to the Pacific coast and on his return made a speech to the Washington staff of the Board, in which he was not sparing of his praise. On another occasion, for some mysterious reason, he invited Mr. Bridges to call him on the long-distance phone at the Government's expense. On still another occasion, Bridges presumed so far on his friendship with Smith as to write him requesting the appointment of certain employees to represent the Board in Hawaii. In his letter Mr. Bridges stated:

> At the same time, because of the employers' iron control over the whole situation in the islands, it needs a strong man and one who is not susceptible or easily swayed by the arguments, intimidations, etc.; and I hope you will do what you can to see that somebody of the type of Mr. Eagen or Mr. Edises can be immediately selected for Hawaii.

That Mr. Smith recognized Bridges' right thus to interfere in the internal management of the Board is indicated by his reply, in which he states:

> I agree with you as to the importance of having the right sort of man in Hawaii, and the Board has this very much in mind.* * *
> If you ever get to Washington I should be glad to talk these matters over with you.

Mr. Speaker, I wish that I could continue to enumerate the many instances in the record which indicate the utter incompetence and bias of Board Member Smith. I feel, however, that his espousal of the cause of the C. I. O. against employers and against the A. F. of L. is so notorious that a resort to further examples is unnecessary. I can honestly say that the evidence in the record that Mr. Smith attempted to boycott an employer should have led any person, with a sense of honesty and decency, to resign his position with the Board.

It seems that the philosophy of Messrs. Smith, Saposs, and Witt reflects the general attitude of many other employees of the Board. The policies of the union of board employees, known as the N. L. R. B. Union, bears this out. On its program, for example, was the support of the notorious Communist organization, the American Friends of Spanish Democracy. A contribution of at least $400 to this group was raised by the solicitation of members and by barbecues sponsored by the union and attended by the Chairman of the Board. It has made contributions to C. I. O. organizing drives and to the radical International Juridical Association, another of the communistic front organizations. Among its connections are affiliations with the notorious American League for Peace and Democracy and the Anti-War Congress. An interesting illustration of its thinking on patriotic subjects is brought out by the union's action in protesting against a ceremony held by the Anti-War Congress at the Tomb of the Unknown Soldier. In making its protest the union stated that the ceremony was "contrary to the spirit of the antiwar movement."

As further proof, Mr. Speaker, I might direct your attention to certain statements which appear in the writings of various Board employees. One of them, an officer of the union of employees, commented on the United States Supreme Court in May 1938 that—

> The Morgan decision had us disturbed greatly for a few days, but the courts have on their "red" robes again and we are on top of the world.

Another wrote of the Russian exhibit at the world's fair that it was—

> By far the most impressive * * *. Just seeing this exhibit might work up an interest in you not only to see the country but also to become a citizen of Russia.

I promised, Mr. Speaker, to refer to certain radical and subversive tendencies which may be found in the C. I. O. In my remarks on this phase of my subject I do not mean to infer that all of the rank and file of the organization are infected with such tendencies. On the contrary, I know that that is not the case. The truth of the matter is that the Communists in this country have bored their way into the ranks of labor and by presenting a united front have been able to achieve positions of prominence and power. Unfortunately, their philosophy seems to have influenced the leadership of the movement. To my mind, it is the identity of philosophy in the Board and in the leadership of the C. I. O. which has caused the Board to espouse the latter's cause.

An event which occurred in February 1940 is most significant. On February 11 the President of the United States

made a speech on the White House lawn to the delegates of the so-called American Youth Congress. When Mr. Roosevelt administered a gentle rebuke to the organization because one of its local councils had opposed financial aid to Finland, his remarks were greeted with boos.

Shortly afterward John Lewis appeared before the same organization and, in the words of a reporter, "received an ovation from the 2,200 persons who jammed the auditorium to capacity, a reception that contrasted markedly with the perfunctory applause the delegates had given the President."

Amid laughter and cheers, Mr. Lewis poured into the receptive ears of the young citizens many words of advice different in tone, and vastly different in substance, from that which they had so reluctantly received from the Leader of the Nation. Lewis derided the President's remark that the delegates should be grateful for their right of free assembly and for the right to petition for redress of grievances; he characterized the President's friendly advice about the young members' occupying themselves with problems that they did not understand as "a head-on clash with my concept of the principles of democracy."

Mr. Lewis assured the meeting that it had only aped the actions of its elders in passing resolutions opposing Finland, favoring Russia, and otherwise flying in the face of common sense and enlightened public thought, for he stated that his own personally controlled United Mine Workers had adopted the same kind of resolution a short time before this meeting of the Youth Congress.

Mr. Lewis closed his peroration with a note of cheer and confidence that this youth group, profiting by his example, would continue its attacks on institutions as they are; would continue its criticisms of officialdom until it gained the objective of forcing the Government to acknowledge the new theory of "the world owes us a living for doing nothing," and by implication, at least, doctrines of internationalism in place of those of responsible democratic self-government.

On April 26, 1940, John L. Lewis revealed with startling clarity the position of himself and those elements of the C. I. O. which follow him in blind obedience. By a sharp attack upon the President of the United States, by a wheedling threat against the right of every Southern State which dared require of its citizens a small poll tax as a prerequisite to the exercise of the franchise, by an invitation to use the Negro vote in combination with the C. I. O. to bludgeon officialdom into granting privileges to the colored people, Mr. Lewis demonstrated, for the permanent record, that Americanism is, to the element which he represents, just another form of the "isms" which are generally and popularly condemned in conventions.

It is with peculiar pride in the high degree of patriotism of the better element of colored workers in this country that we note that Mr. Lewis' appeal reached only that Negro group which was imbued with governmental theories which by no stretch of the imagination could bear the stamp, "Made in America."

It is significant to note that the secretary of the congress, the Negro John P. Davis, also of the International Juridical Association and one time C. I. O. organizer in this city, found nothing reprehensible in Mr. Lewis' declaration of sympathy for the aspirations, ideals, and good works of the Russian super-Communist, Joseph Stalin. In fact, Davis was so encouraged by Lewis' remarks that he predicted, with confidence, that the cooperation of C. I. O.'s Labor's Non-Partisan League—recently denounced as a communistic-front organization, by the executive committee of a union formerly affiliated with the C. I. O., the International Ladies' Garment Workers Union, of which David Dubinsky is president—the American Youth Congress, and the Negro element—which he represented—would bring to the Negro the first taste of victory in this generation.

It is significant to note that a man of the colored race, having perhaps the greatest experience with Negro labor problems, withdrew entirely from this convention, unable to stomach the strange marriage of C. I. O. internationalism and Negro self-seeking. A. Phillips Randolph, foremost leader of the American Negro labor movement, refused to run for reelection as president of the Negro congress, saying in words too sincere to be doubted:

> We have received donations from a large number of C. I. O. groups. We have received donations from the Communist Party. That is not a healthy condition. * * * Where you get your money, you get your ideas and your control.

When Negro Edgar Brown, president of the United Government Employees, attempted to protest against the adoption by the Congress, under Mr. Lewis' inspiration, of a resolution condemning the Roosevelt administration for daring to consider mobilization for American defense more important than the political demands of a certain element of labor, he was hissed and booed. With a simplicity that has the ring of truth, Brown stated:

> I am sure I speak the sentiments of the Negro people, but probably not of some of the white Communists in the audience.

It is significant to note that the southern Negro organizer of the American Federation of Labor, Cornelius Maiden, stated in a public release that neither he, nor the 300,000 Negroes whom he represented, had any sympathy with Mr. Lewis' activities or the action of the Negro congress. He stated that he heartily approved and was confident that the millions of Negro men and women of the South approved of the action of Phillips Randolph when he refused to become a party to the schemes of the Communists and Mr. John L. Lewis' C. I. O. to convert the national Negro conference into an agency of Moscow, Russia. Maiden was forced to admit that the invasion of our congress by the Communists and the C. I. O. will set us back, of course, and hinder our progress. Yet he pleaded that the true friends of his movement would not withdraw their valuable support from the Negro race, simply because an invading army of "reds" from white Communist groups and white C. I. O. local unions tore down the structure of our national Negro congress. It is a tragic and almost unbelievable commentary upon the power madness of John L. Lewis that to him sacrifice of the dignity of political office, combination with subversive dissentient elements, preying upon the fears and fanning the smoldering fires of greed and class-consciousness of a minority race, are all simply manipulations to gain political power, to maintain a munificent salary, and to assure his continued domination of the red labor front, no matter what the cost to the integrity of democratic institutions.

In this time of national crisis, let us search our hearts and ask:

> Can it be truly said that it is liberal to encourage the activities and dominations of this totalitarian autocrat of the labor movement?

In sharp contrast to the political opportunism of the red-infested ranks and the commissariat of the C. I. O. is the following truly American pronouncement of President William Green, delivered before the New England Labor Conference on May 25 of this year:

> The American Federation of Labor has refused at all times to compromise or traffic with the enemies of democracy. There is no room in the American Federation of Labor for Communists or Nazis. We never have wanted any part of them. We don't want any part of them now, and we never will. Their policies and their teachings are hateful to us. We have fought them at every turn, and we have defeated every effort they have made to bore from within the American Federation of Labor.

That there is a hand-and-glove connection between the radical elements of the C. I. O. and the personnel of the National Labor Relations Board cannot be denied in the face of the record before the Smith committee. The Board, through its secretary, on one occasion transmitted to all of its regional directors a memorandum prepared by the C. I. O., in which appears the advice to its members that they should "bring cases only against the main employers in your industry, in

the expectation that if the dominant corporations can be brought into line, the smaller employers will give up without a fight." In transmitting this interesting document, the secretary advised the regional directors that the Board was "of course, sympathetic with the policy expressed in this circular." Mr. Madden himself, on one occasion, recommended the hiring as trial examiner of the author of a book on the C. I. O. The application for employment, which was approved by Mr. Madden, contained the naive statement that the author and applicant would find "most attractive" a position "with the C. I. O. or one with your Board."

Another pipe line between the Board and the C. I. O. seems to be, in addition to Witt and Smith, Mr. Heber Blankenhorn, who occupies this unique official position under the color of an appointment as special investigator. Mr. Blankenhorn has been a close associate of officials of the C. I. O., and the record indicates that he has been a point of communication for information passing from one group to the other.

Blankenhorn spared no efforts to make the Board thoroughly acquainted with the best procedure for helping the C. I. O. to work out an organization in the steel industry, working so completely hand in glove with both that it became difficult to tell which was which. To illustrate, I refer to a letter from Blankenhorn to John L. Lewis (which might just as well have been written to Warren Madden), from which I quote:

> As against mythical ideas, it seems to me that your attitude of big brother and counselor and supporter is very salutary. And I noticed that it has a really inspiring effect on the young auto and rubber leaders. It puts them right on their mettle with loads of confidence.
>
> I made as careful inquiries as I could after the meetings among various people, trying to form my own dispassionate judgment, but for the life of me I cannot help but feel that you have started a real ground swell and that a widespread and what may be a pretty rapid movement is actually under way. Again congratulations on the speeches.

This public official, with a candor truly alarming, permitted himself an extraordinary latitude in sympathy in his communication to Clarence Irwin, steel organizer and C. I. O. leader, reading:

> Golden (regional director of the Board's Pittsburgh office) is shoving at Brophy (C. I. O. leader), and I am shoving at Lewis. What is so maddening is the loss of time, this when I know that the other side is very badly worried. I know that this includes Myron C. Taylor. They are scared, and we don't move.

Sometimes Blankenhorn's efforts are directed to strategic considerations, as for example in a letter to Sidney Howard, the playwright:

> Steel is the place for all good men to come to the aid of their party.

In April 1937, Blankenhorn wrote a memorandum that is quite remarkable in the annals of administrative agencies. In this letter, he discussed the manner in which the vote of Mr. Justice Roberts in favor of the constitutionality of the Wagner Act had been obtained. According to Blankenhorn, Mr. Justice Roberts' vote was controlled by the "Philadelphia and New York" interests, especially Roberts' financial connections. Mr. Blankenhorn analyzed the situation as he saw it, recalling his prophecies of January 1937 concerning the auto and the steel situation and showed, at least to his own satisfaction, that the fact that the C. I. O. had been able to sign up these industries in collective agreements was the reason why Mr. Justice Roberts had voted for the constitutionality of the act. In the course of the memorandum, Mr. Blankenhorn said: "When Lewis, in January convinced Morgan, he cast Roberts' vote." For an employee of an administrative agency to accuse a Justice of the United States Supreme Court of being influenced by "financial interests" and to retain his position thereafter, is to say the least, amazing and alarming.

In closing my remarks, Mr. Speaker, I feel that I can justly say that we have in this country two distinct threats to our national unity and that both groups share the same ends and move in the same direction. If ever we needed an orderly industrial process we need it now. The legitimate ends of labor must be served, but we cannot allow tactics which will destroy or cripple our industrial machinery. Nor can we permit unnecessary disputes which mask revolutionary ends by claiming to uphold the cause of labor. At the same time, we cannot tolerate in our Government an agency which espouses the radical elements of the labor movement and shapes its actions according to a philosophy that there must always be a breach between capital and labor and that the cause of labor can be advanced only by widening the breach.

It is high time that we return to the American philosophy that capital and labor have an equal share of rights and duties in industry, that the interests of the employer and the employee are mutual and not diverse. We cannot return to this view by encouraging a governmental agency to champion one element of labor, overriding the rights of employers and of other labor groups.

Patman Chain-Store Bill

EXTENSION OF REMARKS

OF

HON. WESLEY E. DISNEY

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 4, 1940

LETTER FROM EDWARD J. NOBLE

Mr. DISNEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from Acting Secretary of Commerce Edward J. Noble to Hon. ROBERT L. DOUGHTON, chairman of Ways and Means Committee, House of Representatives, regarding H. R. 1:

MAY 16, 1940.

Hon. ROBERT L. DOUGHTON,
Chairman, Committee on Ways and Means, House of Representatives, Washington, D. C.

MY DEAR MR. CHAIRMAN: In your letter of March 5, 1940, you enclosed a copy of H. R. 1, known as the Patman chain-store bill, and requested the views and recommendations of the Department with respect to this proposed legislation.

The bill, as introduced, provides for an excise tax on retail chain stores. After exempting the first 9 stores, the first bracket of 10–15 stores carries a tax of $50 each. At the other extreme the tax is $1,000 for each store over 500. The tax imposed would be multiplied by the number of States in which the company operates. Gasoline filling stations, restaurants owned by common carriers, and branch offices maintained by newspapers for distribution of their papers are exempted from the terms of the bill. The bill, if enacted, would become effective on July 1 following the date of its approval, and for the first year the tax would be one-half of the amount determined; for the second year three-fourths of that amount, and the full tax rate would be assessed beginning with the third fiscal year after enactment. The sponsors of this measure have submitted certain amendments to the bill which have been brought to our attention. The amount of the tax specified in section 1 of the bill has been reduced by 50 percent in each bracket, and a new subsection (c) has been added to section 1, which would make the bill inapplicable to any person who did not open, establish, operate, or maintain more than 50 retail stores in the State in which his principal place of business was located or within a radius of 100 miles of the city or town in which was located the principal place of business of said person. At the end of section 2 there has been added a new section designated 2 (a), providing that section 2 should not apply to any person opening, establishing, operating, or maintaining on the effective date of the act retail stores under the same general management, supervision, ownership, or control and located in more than one State, if during that period such person should operate only such retail stores or a smaller number thereof, but should apply to such person if the number of retail stores were increased by him during that period, or the location of any of the stores was changed. Finally, section 4 of the bill has been amended by eliminating the exemption of filling stations engaged primarily in the sale or distribution of petroleum products and not engaged in the sale or distribution of automobile tires or tools.

The effect of this bill, both in its original form and as amended, is to destroy the business of the large interstate retailing chains, and the admitted purpose of its sponsors is to accomplish that result. The bill would also seriously impair the operation of small interstate chains and large intrastate chains. The tax created by this bill would be added to tax and other restrictive legislation to which chain stores are already subjected by many States.

The Department recognizes the severe competitive pressure on small independent merchants resulting from the growth of mass distribution with multiple outlets under one ownership and management. Business mortalities and unemployment resulting from increased efficiencies and lowered cost of distribution in competitive enterprises create social problems which are the just concern of government but whose solution does not lie in legislation penalizing efficiency. Failures due to unfair competition can find relief in laws already on the statute books prohibiting discriminatory selling practices, misleading advertising, and other unethical methods of doing business. As a matter of fact, some of the unfair practices with which the chains have been charged have already been legislated against, as indicated:

(a) The Robinson-Patman Act, designed in part to prevent the abusive use of bargaining power.

(b) State unfair practice acts, now in force in 25 States, designed to eliminate loss-leader selling, a practice used more widely by chains than by independents.

(c) State fair-trade laws, now in force in 44 States, designed to eliminate loss-leader selling of trade-marked articles by permitting contract between producer and distributor.

In the opinion of this Department H. R. 1, though destroying interstate chains, would afford only temporary relief to the small independent merchant it seeks to favor.

The salvation of any retailer lies not in prohibiting a particular type of efficient competition by legislation—particularly when such legislative action is confiscatory and unjust in character and seems to destroy entirely the interests of the consumer. It lies in prohibiting unfair trade practices by all retailers, wholesalers, and manufacturers. Above all, it lies in the retailer achieving for himself whatever efficiency is developed or enjoyed by a competitor by adopting or improving on the methods of that competitor by cooperative purchasing, advertising, or credit facilities and the like. It is also true that the enterprising independent often has an opportunity to secure and hold his trade by furnishing types of service and by maintaining a quality of merchandise superior to that of his competitors. The primary public interest is served only when our distributing machinery operates at lowest cost, thereby bringing to the producer a larger share of the consumer's dollar, besides making that dollar go farther than it does now. The displacements of labor and obsolescence of capital that are caused by new methods of distribution are on a par with all other problems of unemployment caused by technological advance. There is much that the Government has done and should do to ameliorate those difficulties. However, every advance that saves labor or the need for capital will more than pay its way. It would be fatal to check new methods of distribution or any other phase of technological advance merely because it does involve problems of adjustment, however serious they may be. Those problems are temporary and susceptible of solution, but a stagnated economy is the least desirable solution.

In addition to the above general statement, this Department advances the following specific objections to H. R. 1:

1. It proposes the most extreme use yet suggested for the taxing power, not to raise revenue, not as an incentive, not as a regulator, but to prohibit interstate business.

2. It would add a most vicious barrier to interstate trade of a legitimate character.

3. It would raise the cost and thereby lower the standard of living of the consumers with lowest incomes.

4. It is designed to destroy the business and the livelihood of investors and their employees who have promoted short cuts in distribution, without reference to their having engaged in any unfair or oppressive practice.

5. It is fallaciously supposed to increase employment, whereas at best it would merely shift employment from one class of establishment to an older and apparently less efficient type, resulting probably in less continuity and lower standards of employment.

6. It prevents mass production from yielding its greatest benefit through mass distribution on a national scale.

7. It opens the door for legislation penalizing all interstate businesses when intrastate sellers desire freedom from competition.

The Department has consulted many businessmen, both large and small, on the subject of this legislation. We are convinced that it is not favored by farmers, by consumers, or by any substantial group of fair-minded businessmen.

In view of the above considerations, the department is not in favor of the enactment of H. R. 1.

The Bureau of the Budget has advised that there is no objection to the submission of this report to the committee.

Very sincerely yours,

EDWARD J. NOBLE,
Acting Secretary of Commerce.

Assistance to the Allies

EXTENSION OF REMARKS
OF
HON. JAMES F. O'CONNOR
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 4, 1940

PETITION FROM CITIZENS OF CHOUTEAU COUNTY, MONT.

Mr. O'CONNOR. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following petition received by me from citizens of Chouteau County, Mont.:

FORT BENTON, MONT., *May 30, 1940.*

Hon. JAMES F. O'CONNOR:

The undersigned citizens of Chouteau County do urgently appeal to you to use your utmost influence for legislation to assist the Allies in every way except by the sending of our soldiers overseas. Perhaps our present air force and merchant marine should be leased to the Allies; our Johnson Act be debated for repeal; and prohibition of American soldiers volunteering for foreign service be repealed. Economy and postponement have no place in our national defense. This the Allies have proved.

J. A. Hanford, Louise G. Hanford, A. E. McLeish, D. W. Flagler, Ingolf Birkeland, Elizabeth F. Birkeland, T. N. Birkeland, W. F. Anderson, Mrs. W. F. Anderson, Mabel I. Ritter, Dorothy Ritter, J. Ritter, Marian Ritter, Mrs. Oscar Johnston, Mrs. Alvin Jones, Forrest J. York, Ted Worrall, E. J. Hankins, E. R. Clark, Howard Hilton, F. H. Palmer, Mrs. Fred Pangburn, Nathan Schrader, B. W. Horn, W. H. Schurmann, Margaret Smith, Thos. K. Collins, Alvin Jones, Irvin Rust, Hazel M. Young, Fred L. Young, C. Arnst, Ira W. Vinion, H. F. Miller, J. F. White, George F. Moses, Norman Grylls, Wm. H. Jenkinson, Frank Lell, Claude F. Morris, J. E. Halley, L. H. Schultz, Cecil Cook, W. Bailey, Harry R. Morrow, Claus Wedor, Frank Elliott, Victor Eckman, E. T. Breault, Teresa Loundagin, Chas. Wildunot, A. L. Allen, Virgil Cox, Sam Watson, John Gallagher, C. W. Allen, K. Bauman, Wearn Rowe, Albert P. Kreps, Oswald Jones, E. David Carpenter, Marvin Norton, Otto Stevens, Fred F. Lenning, T. N. Tucker, Walter Davis, L. W. Prunninger, Sig. V. Smith, W. R. Hagie, Preston Baker, A. H. Jones, E. Hildred Jones, J. Kaulbach, D. Peterson, Mrs. Warren Halley, J. D. Savage, Mrs. J. D. Savage, Joe Vielline, J. F. Curtin, Oscar A. Paul, Dale Apple, F. J. Taylor, Joe F. Overholser, James Overholser, M. S. Thorpe, Amy P. Bartley.

"Fifth Columns"

EXTENSION OF REMARKS
OF
HON. EARL R. LEWIS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 4, 1940

RESOLUTIONS BY CZECHOSLOVAK FRATERNAL LODGES OF OHIO

Mr. LEWIS of Ohio. Mr. Speaker, I rise at this time to call attention to a most unusual action taken by representatives of Czechoslovak fraternal lodges, civic and patriotic bodies in Belmont and Jefferson Counties, Ohio, recently.

It is indeed inspiring to know that our foreign-born citizens of the Czechoslovak nationality are rising to great heights in patriotism in the face of apparent danger to the

Republic from so-called "fifth columns" working from within as well as from possible enemies from without. I am today in receipt of a resolution expressing the true sentiments of these our foreign-born brethren, and I sincerely trust that their example may inspire us all in these troublous times and help us to realize that we do have here in America a heritage worthy of our noblest efforts. The resolution to which I refer is as follows:

BRIDGEPORT, OHIO, *May 26, 1940.*

We, the representatives of the Czechoslovak fraternal lodges, civic, and patriotic bodies in Belmont and Jefferson Counties, State of Ohio, recognize that the ruthless invasion of peaceful and democratic countries in Europe by unscrupulous dictators cause us to adopt the following resolutions in order to fully exemplify our love and loyalty to our adopted country, the United States of America:

Whereas the most inhuman war in the annals of the world's history is now raging, destroying lives, property, nations, and liberties, the greatest and dearest heritage of the human race;

Whereas it has proven conclusively that in most of the nations conquered by the selfish and power-thirsty dictators that they have been materially assisted within said conquered nations by traitorous elements known now as the "fifth column": Therefore be it

Resolved, That we, the above-mentioned representatives of the fraternal, civic, and patriotic bodies, pledge our allegiance to the United States of America, and to the principles for which it stands; that we in unmeasured terms renounce and condemn all persons or groups of persons directly or indirectly connected in any way with those who are either members or sympathizers of the "fifth column" or anyone who would attempt to undermine our republic form of government; and we do hereby assure our great President, Franklin Delano Roosevelt, of our continued cooperation and support in his efforts to improve our country and better the conditions of its people; and be it further

Resolved, That for the preservation of these principles we stand ready to make the supreme sacrifice should it ever be necessary.

FRANK LIDNIUKA, *Chairman.*
JAMES LEPIC, *Secretary.*

The following representatives have signed in behalf of their organizations, whom they represent:

Frank Mertl, Czechoslovak legionnaire, Lansing, Ohio.
Stephen Herink, Court Pizen, No. 115, F. of A., Bridgeport, Ohio.
Antonia Bittingl, Lodge Vlastenka Unity of Bohemian Ladies, Bellaire, Ohio.
Theresa Prokes, Lodge Dobromila, No. 46 B. L., Bridgeport, Ohio.
Marie Spirak, Bellaire, Ohio.
Karel Kerner, Lodge J. Paltgelt, 272 C. S. A., Dillonvale, Ohio.
Anna Plechaty, Lodge Kruh Asvojenych B. L., Dillonvale, Ohio.
James Fisher, Lodge C. S. P. S., Neffs, Ohio.
Bessie Dvorak, Sisters Union, No. 65, Neffs, Ohio.
Frank Marik, Branch Czechoslovak Alliance, Bellaire, Ohio.
Jos. Vavroch, Lodge Vaclav Snajdr, 251 C. S. A., Bridgeport, Ohio.
Cipryan Valachovic, Branch 456, N. S. S., Bellaire, Ohio.
Frank Pogorelski, Branch 635, N. S. S., Bridgeport, Ohio.
Math Kren, Branch Czechoslovak Alliance, Bridgeport, Ohio.
Anton Dvorak and Thomas Frubert, Branch Czechoslovak Alliance, Neffs, Ohio.
Anton Krob, veteran, World War, Blaine, Ohio.
Frank Paul, Lodge Lech, No. 310, C. S. A., Bellaire, Ohio.
James Pumpa, Neffs, Ohio.
Joseph Vild, Lodge William Kerober, C. S. A., Maynard, Ohio.
John Matuska, Catholic Sokol, No. 87, Lansing, Ohio.
Anton Latochka, Lansing, Ohio.
Marie Kren, Bridgeport, Ohio.

Suggestions for Defense Program

EXTENSION OF REMARKS

OF

HON. JOHN C. KUNKEL

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 4, 1940

ARTICLE BY WALTER LIPPMANN

Mr. KUNKEL. Mr. Speaker, with permission of the House, I am inserting in the RECORD an article by Walter Lippmann, entitled, "The Guardians of America's Fate," which appeared in the Washington Post on Saturday, June 1. The analysis which Mr. Lippmann makes in this article and the suggestions contained therein merit the critical study of all those who are primarily concerned with providing the United States quickly with an adequate national defense.

The article follows:

[From the Washington Post of June 1, 1940]

TODAY AND TOMORROW—THE GUARDIANS OF AMERICA'S FATE

(By Walter Lippmann)

The critical problem at this moment in Washington is the organization of what may be called the high command, where decisions of transcendent political importance will have to be made almost immediately and from which over a long subsequent period of time must come the planning and the direction of the national defense. The primary responsibility is, of course, vested in the President but the President's powers are not adequate or effective without the support of Congress and without the enlistment of the energies of the people.

However, in this great business "the President" is not just the man, namely Mr. Roosevelt, who holds the office. The President is an institution, the main organ of government for the conduct of foreign affairs, for the raising and equipping of the armed forces, for the command of those forces, and for the management of the Nation's effort. It is obvious that no human being can personally exercise the whole power of the Presidency; this is beyond the capacity of the human mind, and an attempt to regard the powers of the Presidency as the personal responsibility of any man who happens to be in the White House is absolutely certain to lead to confusion and failure.

The man who is President—whatever his name or his party—must at a time like this regard the Presidency as an organized command of highly responsible men whom he selects, over whom he presides, whom he inspires, but only, in the very largest questions of policy, directs. He must not regard the defense administrators as his personal agents and his personal council any more than he would—in time of actual war—presume to tell the commander of the fleet what must be the tactical disposition of the Navy.

If this distinction between the Presidency and the man who is President is forgotten or confused, the President will attend to so many things that he will never have time or energy for the greatest things, and the administrators will become bogged down in the mire of bureaucratic timidity and jealousy.

For the great emergency in which this country finds itself, it will be well to fix clearly in our minds that the national defense has to be organized both through decisions in foreign policy and through the raising, training, and equipping of the armed forces. The decisions in foreign policy will in the present crisis have to be made in the very early stages of the defense program, long before the program has been carried out, and these decisions will be of such a character that they may determine the problem of American defense for generations to come.

President Roosevelt must be fully aware that in the next weeks or even days the country may be confronted with very hard choices affecting its vital interests and its basic security in both oceans, and in this whole hemisphere from Canada to South America. The informed in Washington have just recently begun to realize how near we may be to the necessity of taking decisions which are as momentous as any in our whole history.

They are decisions which cannot be taken by one man and his personal advisers; they are decisions like those which preceded the announcement of the Monroe Doctrine. It will be recalled that in that critical time President Monroe laid the whole matter before the elder statesmen of the Republic, in office and in retirement, before making up his mind. Mr. Roosevelt is now on the very verge of being presented with as great or greater issues than was President Monroe, issues which cannot be evaded, issues which, however they are decided, will produce momentous consequences.

It is imperative that he should take at once into his complete confidence the leaders of Congress and the elder statesmen of both parties, and that they should become prepared by first-hand knowledge of the situation in order that they may share with him the awful burden, and in order that the people may feel certain that the decisions are the best that can be made. With the help of the American leaders the President can then take the Nation into his confidence and tell them the truth of what is happening and of what is impending. This is not a question of a coalition Government or of any kind of political window dressing. This is a question of taking decisions affecting vitally the defense of America; the majority and minority leaders in both Houses of Congress, the Vice President and the Speaker, the titular heads of the Republican Party, the ex-President of the United States, Mr. Hoover, and also I believe the Chief Justice should be called upon to formulate the decisions. It is a matter for the whole Government, representing the whole people.

Whereas in these matters of the highest policy the decisions need to be taken by the President, with the advice and support of the Representatives of the Nation, in the actual organization of the national defense there is needed above all others things clearly defined responsibility and full authority.

It is amateurish, for example, to give the country the impression that its defenses are to be improved by a commission consisting of seven equally responsible persons, and we may assume, I suppose, that no one is actually thinking of making Mr. Knudsen, for example, get the consent of his six colleagues in planning and directing a program of aircraft production. Yet no one can be sure that he will not have to get their consent, or that Cabinet officers will take

orders from him, or that he will not wear himself out trying to persuade the President to crack down on obstructionists. For this reason the present organization is radically defective. Therefore, Messrs. Knudsen, Stettinius, and Budd—the men actually charged with producing the goods—will do well before they go any further to insist upon a much more workable organization. There is no use their starting to work until they have the proper tools. They do not have them now in an arrangement where they derive their own authority from the President personally and their knowledge of what the armed forces require of them from the virtually headless War and Navy Departments.

The proper solution, as Mr. Hoover has demonstrated, is to establish with all necessary powers a Munitions Administration with a single responsible head who will select the production managers to plan and direct the procurement of supplies. There should then be appointed a new Secretary of War, and a new Secretary of the Navy to tell the Munitions Administration what is needed and in what order of urgency, and also to make sure that the best commanders available are in charge of the naval and military forces. Finally, there should be appointed a new Secretary of Labor who, while protecting standards necessary to support health and efficiency, can and will support the Munitions Administration by measures to increase the productivity of the workers and by measures to train the unskilled for skilled trades.

These new posts should not be given to politicians, Republican or Democratic, for the purpose of presenting the appearance of a national government. They should be given to experienced executives for the purpose of making the national defense efficient.

The Baltimore Sun spoke the profound truth when it said yesterday that "Mr. Roosevelt and his subordinates must stop underestimating the character of the American people." They must stop flinching at the prospect of having to tell the people the hard truth about what confronts them and about what it means in the way of work and sacrifice. They can count upon the patriotism of the American people to withstand and endure the things that may now be in store for them—provided only the people know that their fate is not in the hands of any one man and that the ablest and the wisest and the strongest men available are on guard and in command.

The Poll Tax

EXTENSION OF REMARKS

OF

HON. LEE E. GEYER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 4, 1940

LETTERS FROM J. HARRY KELLY AND ROSA A. SMITH

Mr. GEYER of California. Mr. Speaker, the importance to non-poll-tax States of abolishing the poll tax as a prerequisite to voting is becoming realized more and more. Numerous letters come into my office from citizens of non-poll-tax States, the burden of which is that because of the influence of Representatives from the poll-tax States on the legislation in Congress affecting the Nation as a whole, it is important to every citizen of the United States that these Representatives be true representatives of the people in their districts, rather than of a minority. Under leave to extend my remarks, I offer samples of such letters:

KIMBALL, S. DAK., *May 20, 1940.*

HON. LEE E. GEYER,
House of Representatives, Washington, D. C.

DEAR MR. GEYER: I receive the CONGRESSIONAL RECORD regularly and check each issue for the high lights, and was particularly interested in your talk in the House on May 7, on page 5717 of the RECORD, and on pages 2756 and 2757 in the Appendix of the RECORD, which treated of the poll tax in the eight States in the South, the nonpayment of which disqualifies citizens of the right to vote. I must confess I did not know this before; and, putting it mildly, I will say it is a disgrace and, I believe, unconstitutional in our land.

Certainly no one sponsoring such a law can claim to favor a free representative government of which we Americans like to boast. I believe that any man sent to the House by the vote of so few people of his State might well have his right to vote in that body challenged, as you hinted but did not quite say. Certainly that man is not a representative of the majority of the people who will be asked—or not only asked, but required—to abide by the laws he will sponsor and help to pass. It is the most positive example of government without representation of which I have heard. I join the man who wrote in the New York Evening Post the article you had printed in the RECORD.

We, of course, in South Dakota are not affected by such a law, but if the power to restrict the right to vote in that way can be practiced in those States, why not in South Dakota eventually? We must curb this vicious practice before it extends to such a degree that the right to vote is only enjoyed by those who enjoy the good things of the Nation. I would be pleased to have a copy of your bill, H. R. 7534.

Very respectfully,

J. HARRY KELLY,
President, Kimball Townsend Club No. 1.

LOS ANGELES, CALIF., *March 20, 1940.*

Congressman LEE E. GEYER,
House of Representatives, Washington, D. C.

DEAR MR. GEYER: As you have sponsored a bill to free the people of the Southern States of the chain around their necks called poll tax, will say 35 years ago I lived in one of the States that imposed a poll tax on the people. Only then there were 3 classes who could not vote: women, Negroes, and the insane. I was not allowed within 100 feet of the polls. I always rebelled at the law that denied me my rights as a human being and an American citizen. So I, being the mother of 5 daughters, refused to live in a State that did not count us only as among their mules.

Now I am in California where I can go to the polls with my husband and express my views at the ballot box. So can my 5 daughters who all live in California. And we don't have to pay for this glorious privilege. Mr. Geyer, do all you can to free my southern sisters from the poll tax.

Yours for a free South,

ROSA A. SMITH.

Roosevelt and Some of His Keymen Have Coddled Members of the "Fifth Column"

EXTENSION OF REMARKS

OF

HON. LEWIS D. THILL

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 4, 1940

ARTICLE BY WESTBROOK PEGLER

Mr. THILL. Mr. Speaker, under leave to extend my remarks, I include the following article by Westbrook Pegler, which indicates that Roosevelt and some of his keymen have coddled members of the "fifth column."

[From the Washington Post of May 31, 1940]

FAIR ENOUGH—UNWITTING CONSORTS

(By Westbrook Pegler)

About the same time that President Roosevelt was on the air last Sunday night warning the country against clever schemes of foreign agents two other members of the New Deal family delivered public addresses.

In New York, Mrs. Roosevelt attended a meeting of the New York Youth Congress, a subsidiary of the American Youth Congress, which is a transmission belt of the Communist Party. Harold Ickes made a speech in Cleveland.

Mrs. Roosevelt's hosts adopted a resolution consistent with the Moscow party line, condemning rearmament by the United States. They also opposed action against the Communist Party and cheered an assertion by VITO MARCANTONIO, a Congressman who runs with the Communists, that the new weapons of the United States were intended for an aggressive war on behalf of the American dollar and the British pound. Mrs. Roosevelt, who often attends meetings of transmission belt or Trojan horse organizations of the Communist Party, did not see eye to eye with the youth congress, insisting that failure to rearm might result in the needless sacrifice of many American lives.

The identity of Mr. Ickes' hosts I do not know, but the account which I read said that he "urged a vigorous campaign against 'fifth column' activities."

Just here I would point out—not that it seems necessary—that both Mrs. Roosevelt and Mr. Ickes have been consistently guilty of consorting with the "fifth column" of the Communist anti-American conspiracy, and that there are more deadly and stealthy enemies of the civil liberties which Mr. Ickes treasured in his speech than certain groups to which they have flagrantly and gratuitously given aid and comfort.

Mrs. Roosevelt has attended meetings of the National and World Youth Congresses, both controlled by vicious adult conspirators in Moscow, and has adorned, with her political and personal prestige,

meetings promoted by the Trojan horse Workers Alliance. Those organizations are no more innocent than the anti-American bund of the Nazi Government or the Sons of Italy, which maintains cordial relations with and promotes devotion to the Fascist, antidemocratic, anti-American Government of Italy among Americans of Italian blood. There is no more justification for the appearance of an officer of the American Government or a member of the President's personal and political family at occasions organized by the Moscow "fifth column" than for the appearance of the same persons at rallies of the bund or the Fascist order.

Mr. Ickes showed his preference or tolerance for the Communist breed of Trojan horse when he made an ostentatious political appearance under the auspices of the National Lawyers' Guild. This guild was organized as a liberal rival to the American Bar Association, for which there was need of rivalry. Soon, however, it fell under the partial control of "fifth column" lawyers—who are most numerous, incidentally, in the Washington chapter, where many of them are or were employed in the Government in the guise of liberals and New Dealers, concealing the party membership or holding the status of fellow travelers.

Ferdinand Pecora, a justice of the New York Supreme Court, a liberal, the man who conducted the Wall Street expose in the early days of the New Deal and a founder of the Lawyers' Guild, openly denounced the Trojan horsemanship of the Communists in the guild. As in the American Newspaper Guild, the American majority, occupied with their regular work and unwilling to devote their time and energies to a constant fight against Communist influence, presently found that the Communists were making the policies and decisions and following the Communist Party line.

On another occasion Mr. Ickes selected for his platform the New York Newspaper Guild, which has been notoriously communistic in policy and is now recognized by the American membership and by a larger number of nonmembers as a faithful Old Dobbin of the Trojan stables. He sat with undercover Communists and ill-disguised fellow travelers whose "clever schemes" then, as now, were designed to sabotage recovery and who today have abandoned the New Deal, because the President denounced Moscow's assault on Finland and because the New Deal is attempting to arm against Stalin and his ally, Adolf Hitler.

Mrs. Roosevelt is her own boss, and Mr. Ickes, having an official position and official responsibility, is only slightly less free. If they must run with the Communists, that is all right, but their conduct tends to confuse the meaning of the President's warnings against the "fifth column."

Recognized Military Authority Endorses Department of National Defense

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 4, 1940

LETTER FROM MAJ. GEN. WILLIAM C. RIVERS

Mr. VAN ZANDT. Mr. Speaker, since I introduced House Joint Resolution 417 on January 10, 1940, providing for a survey of our national-defense needs and resources, many of the Nation's military experts have endorsed the principles of the resolution.

This morning I received the approval from Maj. Gen. William C. Rivers, retired, United States Army, a graduate of West Point, and one who served with honor and distinction in all wars in which our country participated the past 50 years.

General Rivers saw service in Cuba, the Philippines, and had a battle command in all major battles in France during the World War. At the time of his retirement he was the Inspector General of the Army at the War Department in Washington.

The attention of the membership of this House is called to the fact that General Rivers' opinion represents 50 years of military experience. Surely his views are worthy of consideration.

Therefore, I urge every Member of this House to carefully digest the contents of General Rivers' letter on the question of a Department of National Defense.

The letter follows:

NEW YORK, *June 1, 1940.*

Hon. JAMES E. VAN ZANDT,
Member of Congress, Washington, D. C.

DEAR REPRESENTATIVE VAN ZANDT: May I write you concerning House Joint Resolution 417 introduced by you? I am particularly interested in paragraph 3 of your resolution providing that the National Defense Commission created, in case your resolution should become law, shall examine into the practicability of establishing a Department of National Defense.

I assume that a Cabinet Minister of Defense would be the head of the Department of National Defense. A civilian Assistant Secretary would be at the head of each of the services, the Army, the Navy, and the United States Air Corps. These civilian assistants in charge of the three armed branches would be permanent officials, as is the case at present with the Assistant Secretary of State and other Assistant Secretaries. The President at Washington can never closely supervise 10 Cabinet Ministers. But we all know that in a crisis, when five billions are being spent on national defense, the work of each of the three great armed branches must be closely supervised.

Why not allow the President an additional Cabinet officer, a Cabinet Minister of Defense, to aid the Chief Executive in supervising the three coequal armed branches—the Navy, the Army, and the air force? The study of recent surprises concerning Great Britain's reverses in combat in Norway and later in Belgium and France ought to reveal a lesson in organization for ourselves.

My conviction is that Great Britain suffered greatly due to the lack of a cabinet minister in charge of her three armed branches. I believe that the lesson for ourselves is to have, as soon as possible, a more cohesive and coordinated fighting defensive force under a cabinet minister of defense. This controlling minister of national defense would not only inspect the relative progress of the three branches and note where deficiencies occur, but he would be in actual command of all these armed branches. The way to control is to command. Coordination of three different forces involves, or at least invites, suggestions, advice, compromise—delay.

It is interesting to recall that Goethals, who constructed the long Panama Canal, said he made use of his assistants to aid him, but that he rarely used a committee or a board of officials. He thought boards were usually narrow and wooden.

Another example is the case of John W. Weeks, of Boston, who was Secretary of War in the cabinets of Presidents Harding and Coolidge. Weeks had training and experience which fitted him well as a judge of matters such as the one we are now discussing. Weeks was a graduate of the United States Naval Academy who soon resigned from the Navy. He was successful as a businessman and as a banker. Weeks then became a Senator in Congress from the State of Massachusetts.

He was earnestly in favor of a single department of national defense. From his own experience Secretary Weeks stated there was, at Washington, administrative overlapping and administrative conflict—as well as departmental antagonism between the Army and Navy. Secretary Weeks was convinced that there was great evidence of waste in our present organization. He believed that the Cabinet Minister of National Defense would be able to prevent duplication of plants and activities and wasteful expenditure of public money.

Others who made public expression of their advocacy of the single department of national defense include John J. McSwain, late chairman of the Committee on Military Affairs of the House, the late Speaker Byrns, and Lt. Gen. Robert L. Bullard. Many recollect Brig. Gen. William Mitchell's keen advocacy of the single department of defense. Some 10 principal nations have in late years adopted different forms of such a plan for their defense. Of course, Britain and some other countries have committees on national defense. That is excellent as a policy-making body. But a committee is not an effective executive organ.

We need a National Defense Trust. We have had in the past the National Oil Trust, the National Steel Trust, the National Harvester Trust, and so on.

Only by having one member of the Cabinet in charge of all the defense branches can Congress get the unpartisan and objective opinion of a civilian minister who devotes his whole time studying and inspecting the relative efficiency, progress, and needs of the three armed services. Unity of command of the President is increased by his having only one Cabinet Minister to normally consult with and to give instructions to.

Unity of command for the Navy results from having that part of the single Air Corps which goes to war under Navy command train all the time in peace under Navy command. The part of the Air Corps which goes to war with the Army trains under Army command all the time in peace. Graduates of Annapolis and West Point will continue to enter the Air Corps as at present. Graduates of the two service Academies will be assigned to the portion of the single Air Corps with which they are to serve in both war and peace. The single United States Air Corps would have its own laws for pay, promotion, and retirement. The status of the Air Corps will thus be made equal to the status of the two older services. The Chief of the United States Air Corps would control the Air Reserve at the disposition of the Minister of Defense. The Chief of the single and homogeneous Air Corps would have charge

of the research, procurement, and supply services for the Air Corps and of the land aviation schools for preliminary air training.

A natural question is frequently asked by persons who are opposed to the creation of a Department of National Defense: "Is it proper to recommend a Department of National Defense when it is well known that most of the higher officers of the Army and of the Navy are opposed to such action? We should trust our experts." I understand such an attitude. However, we are aware of the fact that probably the majority of the higher officers—the experts—are, naturally, also enthusiasts. We know also that enthusiasts are liable to make errors in judgment—errors resulting from excess of zeal. Trust the experts is a wise general policy. But in a matter of supreme and vital importance to our 130,000,000 people we are compelled to examine into and critically weigh the opinions of every one—of experts and of all others.

In conclusion, my own conviction is that the House Joint Resolution 417 is one of the most important measures before the Congress.

Yours faithfully,

WILLIAM C. RIVERS,
Major General, United States Army, Retired.

Leon Blum's New Deal

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 4, 1940

EDITORIAL AND ARTICLE FROM THE NEW YORK SUN

Mr. REED of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial and article from the New York Sun, of Thursday, May 23, 1940:

THAT FRENCH NEW DEAL

Congressmen might well read an article elsewhere on this page headed "Leon Blum's New Deal." When the times comes for the French to place the blame for Hitler's swift progress in this war, more than generals will be held accountable. The allied forces of communism, socialism, and plain demagoguery gathered under the banner of the Popular Front, did a job which they described as "true democracy." The Communists thought that they were working for Stalin. The Socialists thought that they were working for the workingman.

They were all working for Hitler.

LEON BLUM'S NEW DEAL—ITS EVIL EFFECT ON THE AIRPLANE PROGRAM OF FRANCE

There is food for American thought in the record of the French new deal—which Senator Caillaux once called "Rooseveltism for Lilliputians"—because of its repercussions on the French airplane industry at a time when in France defense was the nation's paramount concern.

The Popular Front Government, which fathered the new deal, came into being when French opinion, swinging violently to the Left, hailed as premier the veteran leader of the French Socialists, Leon Blum. He took office as head of a government representing Leftist political and labor organizations. Reform took precedence over recovery. A 40-hour week was established, overtime was made prohibitively costly and permitted only with official sanction. National and religious holidays, frequent in France, further reduced the working year to 240 days. Other reforms enacted provided for compulsory fortnight vacations at full pay, security of tenure for the workers, wage increases, collective security and arbitration of disputes. Right of dismissal was vested in a Workers' Committee of Discipline which sat in judgment on employers' grievances. Employers lost the right to discharge employees.

The unions drastically limited output per diem per capita and imposed regulations—often Gilbertian—for employment of their members. An immediate result was the closing, or part-time operation, of mills in the great textile belt of Lille, Roubaix, and Tourcoing. Textile manufacturers pointed out that the shortened working week, together with labor regulations which slowed production, increased their operating costs by 35 percent, to which must be added arbitrary wage increases of 15 percent. Thus production costs had risen beyond competitive levels.

Automobile manufacturers, pointing to a vertical decline in production, declared that an automobile which retailed in London for 260 pounds sterling could not be put on the market in France for less than the equivalent of 400 pounds. After 2 years of the new deal, which subordinated all interests to those of labor, unemployment had increased, and French industrial production was only 7 percent above the low of the depression, while British production had risen 57 percent and German production 109 percent.

Two years before Munich the popular front government, which believed in nationalization of public utilities, nationalized airplane factories. To each of 6 companies owning in all some 20 factories, an administrator delegate was appointed. However, the factories never obtained harmonious collaboration.

Figures of airplane production, with which the Paris press abounded after Munich, roused public opinion. It was shown that in some factories after nationalization, production in equal working time had decreased by 40 percent. In others, certain types of war material whose construction formerly required 15,000 hours of labor, were allowed 40,000 hours. Between January 1 and August 1 of that year 1938, the total number of airplanes produced by French factories was 238, representing an average output of 34 per month, against a planned average output of 100. Of the 238 planes, most had been ordered 3 years before, and were capable of little more than 210 miles an hour. The figures were the more disappointing because in January of that same year the new deal government had set on foot the largest production plan yet conceived in France, providing for production of 5,000 airplane bodies and 12,000 engines. But execution had lagged behind schedule, which itself was outmoded by events.

The subnormal production in all industry during this theorists' holiday was charged by former Premier Herriot with the impoverishment of the nation. Gaston Jeze, writing in Ere Nouvelle, called it catastrophic.

H. Z. TORRES.

What Goes On In Congress

EXTENSION OF REMARKS
OF
HON. WILLIAM J. MILLER
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 4, 1940

RADIO ADDRESS BY HON. WILLIAM J. MILLER, OF CONNECTICUT

Mr. MILLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address which I delivered over the radio on June 2, 1940:

At the conclusion of my April broadcast I announced that due to an agreement entered into by members of the American Broadcasters Association, this station could not donate time to Members of Congress. Considering the fact that this is an election year, that ruling is perfectly justified and I deeply appreciate the generosity of Station WTIC in giving me 30 minutes each month so that I could report to you on what goes on in Congress.

It was my intention to omit future broadcasts and confine my reports for the balance of this session to a monthly bulletin. However, a few of my friends felt that these broadcasts should be continued and they therefore named a committee to accept donations to make possible a continuation of this series. I am informed that money enough for two, and possibly three, broadcasts has been donated and that donations have been received from both Democrats and Republicans.

Before I go on with my announced subject, may I take a moment or two to remind you of the drive being made by the American Red Cross for $10,000,000 to carry on its work of mercy in the devastated areas of Europe. It is hard for us, 3,000 miles away from the battlefields, to visualize the suffering of innocent men, women, and children. I hope the Red Cross will succeed in raising the needed $10,000,000, and that this sum will be exceeded substantially. I am sure the people of Connecticut will gladly do their part.

The war in Europe and the efforts of our own country to improve and strengthen our own defenses has, of course, overshadowed all of the domestic legislation considered by Congress during the past month.

Since my last broadcast, the world has been horrified by the cruel attack on Norway. We read in our newspapers or hear on our radios, accounts of the ruthless attack by Hitler on the peaceloving neutral country of Norway. We saw on the screen in our theaters, the bombing and burning of Norwegian towns and cities. We stood aghast as we heard of the treacherous work of the "fifth column." The traitors within made difficult, if not impossible, the defense of that country.

Following as it did by the conquering of Czechoslovakia and the raping of Poland, we were indignant and horrified; then, like lightning, the mechanized forces of Hitler struck at Holland, Belgium, France, and Great Britain. It took just a matter of a few days to overrun and subdue Holland. Last Tuesday the King of Belgium threw down his arms and as I write these words, the most deadly battle of all time rages in France.

Where does all this tragedy leave the United States? What can and should we, as a people, do at this time? What should I, as the Representative of the people of Hartford County, do at this time of crisis? I humbly pray Almighty God to guide us in the direction we should go.

I have come to the conclusion that it is the first duty of this Congress to provide whatever is necessary to protect this country from any possible attack. While our indignation rises we must not be swept off our feet by either hysteria or propaganda. All kinds of wild hysterical suggestions have been made. It has been suggested that the national elections in November be postponed. I agree that partisanship should not affect the decisions Congress must make in connection with both national defense and our foreign policy. There should be cooperation between the executive and legislative branches of our Government; there should, and must be, unity of purpose. Ours is a two-party system of government, and a very definite responsibility rests on the minority. When the requests of the majority are sound we should support them. When unsound we should respectfully oppose them. Sound defense and preservation of democratic methods help each other, while any attempted short cut of government control is dangerous—both to liberty and to defense. Ahead of all else at this time the Congress and the country should know the truth. We should know exactly the real strength of our Army, Navy, and air force.

Now, during the next few minutes, let us review what has taken place in Congress during the past 3 weeks. By May 10 the House of Representatives passed both the War and Navy Departments regular appropriation bills. These two bills appropriated the huge sum of more than $2,000,000,000—an all-time high in our peacetime history. These two bills, in most respects, carried out the recommendations of the ranking officers of our Army and Navy. The commanding officers of each branch of our military service had testified before the Appropriations Committee and had told the committee what their particular branch needed, and almost without exception, their requests were granted.

On the evening of May 15 the President announced that on the following day he would personally deliver a message to a joint session of the Senate and House of Representatives. That message was delivered on May 16. I won't take the time to go into the details of the President's message, as most of you listening today, either heard it over your radios or have read it in your newspapers. Briefly, the President asked for almost a billion dollars to be used as speedily as possible to improve and strengthen our Army, Navy, and Air Force.

As I listened to that message I was disturbed by the picture the President painted, by the woeful lack of modern mechanized equipment for our Army, by the fact that, in the light of developments in aviation abroad, all of our airplanes were obsolete. In addition to definite requests for more than three-quarters of a billion dollars, the President asked for $100,000,000 in cash and authorization for another $100,000,000 in the future, to be made available to him to care for any emergency that might develop while Congress was in recess. The country and the Congress approved the recommendations made in the President's message. This statement is borne out by the fact that in the following 12 days the House passed three separate bills carrying out the President's recommendations, with just one vote in the negative. I shall summarize the provisions of those bills in just a few minutes.

I voted for the bill giving the President a blank check for $200,000,000, much as I was opposed to that provision, simply because it was the second section of a bill written in two sections, and the provisions of the first section were sound and necessary. During the debate on this bill, it was pointed out in 1917, Congress had given President Wilson a blank check for $100,000,000. However, there is this noteworthy difference. In 1917 we were at war; today we are at peace, and with the right kind of leadership we are going to remain at peace. The President, by virtue of the emergency under which we are now operating, has power to transfer funds within the War and Navy Departments appropriation and even to spend money not authorized for the Army and Navy, as was done last September in the amount of more than $375,000,000.

On May 23 I inserted in the CONGRESSIONAL RECORD the report submitted to Congress by President Wilson showing how his $100,000,000 so-called blank check was spent. Most of it went to departments that had regular appropriations. The outstanding exception was an item of $2,100,000 spent by Mr. George Creel's committee on public information. Before I leave this subject I want to say that I deplore the fact that the President dramatized the situation by personally delivering his message to the Congress. Hardly a week goes by but what the Congress receives a message from the White House, and I can assure you that a written message receives the same attention as a message delivered in person. Dramatizing the present situation increases the hysteria, frightens our people, and does no real good.

The other two bills to which I have referred were submitted to the House by the Committee on Naval Affairs, last Tuesday, and approved by the House after 2 hours of debate on each of them. The first one eased certain restrictions now in force in connection with the purchase of naval supplies, such as ships, aircraft, munitions, and so forth. This bill permits the Secretary of the Navy to make purchases by negotiated contracts rather than by competitive bids. This is not the old cost-plus plan used during the World War, but rather provides for a definite set profit, known in advance, and made part of the contract. Many men who have studied naval procurement feel that not only will the Navy get better equipment by this method but will, in many cases, get it cheaper.

Another section of this bill permits the Secretary of War to advance 30 percent of the amount of any contract where the contractor needs the money to buy certain equipment and material. This 30 percent will, of course, be taken out of the final settlement. It does, however, make it possible for a small shipyard or aircraft factory to share in the expansion program.

The third section relates to hours and wages. The so-called Walsh-Healey Act of 1936, which limits the hours that may be worked by those filling Government contracts as well as regulating wages, certain reports, and so forth, does not apply to open-market purchases but only to contract purchases and negotiated contracts which have been ruled to be open-market purchases.

Under this bill, the standard work week is set at 40 hours, but it provides that an employee may work as much as 48 hours per week, providing he is paid time and a half for the additional 8 hours. It is further provided that if the President declares that it is necessary to work more than 48 hours per week, he may raise the limit and require that time and a half be paid the employee for all over 40 hours in any one week.

It is hoped, as a result of this whole national-defense expansion program, that thousands now unemployed will secure work. Contractors will be urged to work additional shifts, instead of making their employees work overtime. It is realized, however, that in many technical jobs it will not be possible to secure additional trained men. For example, take an engineer working on a drafting board in an effort to design a new aviation engine or a new part for a marine engine, or even an antiaircraft gun. In such cases it is just as impossible to put another man on that drafting board, to work on that problem, as it would be to paint a portrait by using three shifts of artists. It is not a case of paying time and a half for overtime, it is a case of getting the job done; of getting our badly needed equipment at the earliest possible moment. Those who say that labor would object to such a provision as the one to which I refer now are, in my humble opinion, insulting labor. The men and women to whom we refer as labor are loyal citizens, and I believe they will cooperate in this emergency as they have done in the past.

The second bill passed last Tuesday provided for the expansion of our naval air service. It provided, first, for the purchase of 7,000 airplanes, which will bring the Navy strength up to 10,000 planes of all types. It provided for the training of 16,000 pilots, and it provided for 20 additional shore bases for naval aircraft. This last item is of great importance. Up to the present time we have not provided for adequate airports for our expanded air services. At the present time, we do not have anything like enough airports to care for 20 or 30 thousand airplanes. The number of planes proposed in this bill for the Navy, and the number provided for the Army, are reasonable and we have every reason to believe that with our expanding aircraft industry, we can get delivery within a year's time.

In his message to Congress, the President asked that the aircraft industry be expanded so we could secure an annual output of 50,000 planes for our Army and Navy; this, in addition to the needs of France and Great Britain, to say nothing of our commercial needs. I fear this is a case of uncontrolled enthusiasm and a false hope. General Arnold, Chief of the Army Air Corps, when testifying before the Senate Appropriations Committee on May 3, 1940, during discussion of the capacity of the aircraft industry said, and I quote, "First, insofar as the productive capacity is concerned.

"I made the statement that we had produced 340 airplanes in January and approximately the same number in March; that we would reach a production of about 800 this fall and about 1,200 by December. I also said that I thought we would have an actual productive capacity of about 17,000 a year. I said that our absolute productive capacity would probably be, by using two and one-half shifts, somewhere between 24,000 and 30,000 annually, but apparently did not make this clear, that that is the absolute maximum productive capacity of the aircraft industry based upon expanded production of all type airplanes being manufactured by the aircraft industry—that is, low-horsepower sport models as well as commercial craft and purely military types—and means 100 percent clicking, if we secured properly qualified mechanics, all of the necessary additional facilities, the necessary administrative and directive forces in the shops, and the necessary engineers. These latter two requirements are so difficult to obtain that I do not believe that we can reach this absolute maximum productive capacity in the United States for probably 1 year or maybe 2 years after we decide that we want to reach it. In other words, the 24,000 and the 30,000 is an ideal figure that we shoot at, that we may or may not ever reach."

I am glad Congress has adopted a reasonable program, one that can be carried to completion within the time limit set.

I have referred to the President's message to Congress and to the way Congress has responded without thought of partisanship, both parties voting unanimously for the bills reported. Before leaving the subject of national defense, I want to mention, very briefly, the President's broadcast of last Sunday night. I refer to that broadcast only because it indicates a serious lack of cooperation between the Army, Navy, and the President. The President said that we have the best and largest Navy we have ever had and that is certainly true, but when the President got down

to listing the equipment the Army has "either on hand" or "on order" there is a great difference between the figures used by the President and the figures given to Congress by representatives of the War Department this past month. For example, the President said we have "3,200 of the best fighting fliers in the world." The following is taken from the hearings before the Senate Appropriations Committee on May 3, and I quote:

"We have only a trained personnel to take care of 1,965 combat planes, and Congress has provided the money to train the full number of men required to operate them.

"Senator LODGE. We will have the same personnel as we have now. They have got enough personnel for 5,500 planes.

"General ARNOLD. No, sir; we do not have personnel to take care of 5,500.

"Senator LODGE. What do we have?

"General ARNOLD. We have personnel to operate 1,965 combat planes."

And so on down the list of tanks, antitank guns, antiaircraft guns, etc. All of which indicates the need of a war industries board to coordinate all defense activities. No one man can keep up with all the details of such a huge program.

I may be about to make a rash statement, in view of the events that have recently taken place abroad, but I do want to say with all sincerity that I do not believe this country is in danger of attack from abroad in the near future. I am more concerned about so-called "fifth column" activity within than I am by threat of attack from without. There isn't a bombing plane made as yet that can come across the ocean with a load and get back to its base again. It would take a navy three times as strong as our own Navy to come over here and engage our Navy on equal footing. Every thousand miles away from its home base reduces naval power by 25 percent. The ocean is still a source of defense for the United States. In spite of that, I do believe that we must prepare at once for any possible eventuality, and I will support every reasonable request made by the President to strengthen our national defense. I am thankful we still have time to prepare, but we should not delay. The experience of Great Britain and France is known to all of us.

If time will permit, I want to refer to one or two other legislative matters considered by Congress during the month of May, One is H. R. 9000 or, as it is known to the Legion, the widows and orphans bill.

This bill provided a pension for the dependent widow, orphans, or parents of a World War veteran in the amount of $20 per month. Under the provisions of this bill it was not necessary that the veteran had suffered any disability while in service. Under existing law, the widow, orphan, or parent of any World War veteran who, at the time of his death, had a 1-percent or more service-connected disability, is entitled to a pension. Under existing law, the widow of a veteran who was killed in battle or who died of a service-incurred disability, receives the inadequate maximum pension of $45 per month, or $38, if under age 50.

I feel very strongly that the passage of H. R. 9000 will definitely close the door in the face of the widows of men who actually died in the service. Time will not permit me to go into all the details of this debate, but I will be glad to send anyone interested a copy of the remarks I made in the House on this subject. However, I do want to say that no Member of Congress holds the members of the American Legion in higher regard than I do. The members of the American Legion have rendered many fine services to their country, State, and community. No organization has done more to point out the need for an improved Army and Navy than has been done by the Legion. For that reason, among others, I feel confident that the rank and file of the American Legion does not favor the passage of this pension bill at this time. That feeling is strengthened by the fact that out of 29 Legion posts in Hartford County, I heard from a representative of only 3 of these posts that favored this legislation. I did get requests from several representatives of the American Legion Auxiliary, who favored the bill. At the same time, I had a great many letters from veterans, including members of the Legion, who were opposed to the passage of this bill. I can only say, that having studied the bill and realizing the situation our country faces, I could not vote for its passage and live up to the oath of office I took in January 1939.

A few weeks ago it was quite generally believed that Congress would adjourn about June 8. The adjournment date is now very uncertain. I hope Congress will stay in session until its work has been completed, even if it takes all summer, and regardless of the effect it might have on any individual. I hope we will pass a sound tax bill. We have reached and exceeded the legal debt limit of $45,000,000,000, and it is well to note for the record that that debt was not created by any national-defense preparations. The debt adds to the seriousness of the problem we face. As the committee of the minority appointed last year to study our national defense needs reported in January, "the huge national debt is the worst crack in our armor at this time."

We must have legislation to prevent the spread of "fifth column" activities. Teeth must be put in our laws dealing with those who engage in subversive activities. The Federal Bureau of Investigation or, as it is commonly called, F. B. I., must be given more agents. In dealing with the "fifth column" activities we must again guard against hysteria. Those of us who remember the World War will remember the number of fine men and women, loyal Americans of German birth and with German names, who were hounded and, in some cases, ruined businesswise due to wartime hysteria.

It apparently has become necessary to fingerprint and register all aliens now in the United States. No law-abiding alien should object to cooperating with our Government to that extent. The records will be separate from any criminal file. Compared to the treatment of aliens in most of the countries of Europe, this is a small request to make of aliens living here. On the other hand, we must remember that there are a large number of law-abiding aliens residing here who have come here legally and who, for perfectly good reasons, sometimes due to age, cannot meet the citizenship requirements of the United States. Others are waiting only for the passage of the required time between filing intentions and the procurement of final citizenship papers. Such aliens are entitled to fair treatment. We have not forgotten that in the World War days, sons of aliens from every part of the world, enlisted in our armed forces and rendered fine service, and in many instances gave their lives for their adopted country.

Admittedly this broadcast is rather disconnected. As a rule I try to prepare the material for each monthly broadcast a week before I am due to present it to you so that necessary mimeographed copies can be prepared. This month developments came so fast that I have had to rewrite my copy three times, so I could add new material taken from messages sent to Congress by the President.

Friday afternoon the President sent another message to Congress asking for appropriations amounting to more than a billion dollars. If this request is granted, it will mean that we have appropriated more than $4,000,000,000 for national defense this year. This additional sum, according to the President, will be spent for the purchase of more cannons, ammunition, antiaircraft guns, auto-tank guns, tanks, etc. Important as these items are, the real important part of the message came in the closing paragraphs when the President asked for authority to call into the Federal service the National Guard units of the several States plus such members of the organized Reserves as he deems necessary. The Members of the House were listening intently to the reading of the message by the reading clerk, and when the request for federalizing the National Guard was read there was a quite general gasp throughout the House.

I have had very limited time to think through the far-reaching implications of this request. Certainly Congress should consider this proposition soberly and calmly. Based on all the information thus far given to Congress, I seriously doubt the wisdom or necessity of federalizing our National Guard. These are State troops, to be used in the States and by the States except in time of invasion or war. We are not at war nor is there any threat of invasion immediately apparent. I believe that the equipment of our National Guard should be modernized and, insofar as possible, mechanized. Plans have already been made by many employers to permit employees who are in the National Guard to have 3 weeks' leave, so they can have 3 weeks' training this summer instead of the regular 2 weeks Provision has also been made for an additional week for normal vacations. Money should be made available for extra drills and perhaps some week-end training, but I cannot believe that current events justify mobilizing and federalizing all National Guard units at this time. Take our own State for example. Hundreds of the men now enrolled in our National Guard hold responsible positions in our essential industries.

We need airplane engines, airplanes, machine guns, and that type of material more than any other one thing today. This latest request proves the need for calm deliberation. We must not be swept off our feet.

In the same connection, I believe we should have more details on the proposal to train enrollees of the C. C. C. and the N. Y. A. for noncombatant purposes. It has been suggested that these men should be trained in the skilled trades so they can be useful in the manufacture of aircraft engines, tanks, trucks, rifles, etc. Certainly there will be expansion, and undoubtedly extra shifts in all of the factories making such equipment, but the question in my mind is should we put these boys and young men into these factories as enrollees of the C. C. C. or N. Y. A. If jobs are available for them in such factories, even as apprentices, I believe they should be discharged from the C. C. C. and taken away from the N. Y. A. and permitted to take employment where they can learn a trade and be useful to the expansion program.

This past week the House Banking and Currency Committee voted favorably on the bill which authorizes the Reconstruction Finance Corporation to set up one or more corporations, financed with funds from the Federal Treasury, to purchase reserve stores for such essential war material as rubber and tin. These essential commodities are not available in the United States. That seems like a very wise proposal, and no member of the committee raised any objection. However, the second part of the bill provided that these corporations could make loans to manufacturers of needed war material, for the purchase of raw material for plant expansion, and for the construction and operation of new factories. These new factories to be operated by the corporation. There was a good deal of opposition to the provision which allows the Government to build and operate new factories—factories that could manufacture cloth for Army uniforms, mess kits, canvas belting, as well as anything else needed by the Army or Navy. This would be in direct competition with private industry, and, at a time when we have thousands of square feet of empty factory buildings all over the country. Mr. Jesse Jones, Federal Loan Administrator, was

willing to modify the bill so that it would be clear that the Government could not build and operate factories unless private industry could not supply the needed material promptly, and at a reasonable price. The majority members, which, of course, means the Democratic members of the committee, refused to even agree to that amendment. One of the majority members made the statement: "We have the vote to pass it as it is sent to us, so why should we modify it at all?"

The following sentiment expressed by the Honorable KARL E. MUNDT is worth repeating:

"As a Republican, I am a member of an indispensable element of a self-governing society—the opposition party. Just as democracy needs a majority party at any given time in its existence, it also needs a strong, virile opposition party which, operating for the time as a minority group, exercises its perfecting influence upon government by subjecting to critical analysis and careful examination every policy or program advanced by the party in power. It is neither good politics nor patriotism for the opposition party to block legislation simply because it is the creature of the party in power, but it is equally bad politics and unpatriotic to shirk its duties of painstaking analysis and public-serving criticism to the end that Government policies may be seasoned and perfected before becoming operative upon the destiny of a free people."

When the United States is faced with grave domestic or international situations, surface thinkers and strong partisans too frequently run to the public with the idea that politics should be adjourned—this means only one thing, the adjournment of self-government in such a land as ours—that all should blindly follow the leadership whether it be good or bad, effective or ineffective, of the majority party of the moment and that opposition denotes a lack of patriotism because it refuses to "go along" with anything or everything the party in power proposes. Such a fatalistic concept of the art of self-government in this Republic is a tragic disservice to our country. It would deprive our country, when its needs are the greatest, of the most effective device it has to successfully meet the challenges that confront it.

At a time when every decision or policy may mean the success or failure of America, it is essential that every move be tested in the fierce light of public debate and forged in the crucible of honest discussion and controversy before it is accepted and adopted as the policy upon which a nation's destiny is to be gambled. At a time of emergency or crisis is no time to accept untested recipes or to resort to the devitalizing practice of taking orders instead of formulating decisions.

I wish I had more time to discuss in more detail the important proposals now before the Congress. May I again assure you that I intend to consider every request made by the President, without thought of partisanship, and will support every proposal that seems necessary to provide for the protection of this Nation and to do everything that is honorable, and that will help to keep this country out of war.

Preparedness Program

EXTENSION OF REMARKS
OF
HON. GERALD W. LANDIS
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 4, 1940

Mr. LANDIS. Mr. Speaker, I wish to call your attention and the attention of my colleagues to the following suggestions which have been approved by many of my constituents of the Seventh Indiana District:

First. Republicans and Democrats must continue to work together on the preparedness program, and it is essential that we remain in session to see that the job is completed.

Second. Emphasis should be placed on spiritual revival necessary to a revitalized democracy.

Third. Capable men should be in charge of the defense program—not bureaucrats. Let the military experts declare their needs and the industrial experts furnish those needs.

Fourth. Defense begins by accumulating raw materials that the United States lacks, such as tin, manganese, and rubber.

Fifth. We should not export any more scrap iron and tools to Japan. These are needed right here at home.

Sixth. We need planes, antiaircraft guns, tanks, antitank guns, and uniforms now.

Seventh. We should organize a home defense with constructive and sane leadership to be ever watchful of the "fifth column" movements in America.

Eighth. We need more vocational education and guidance in America to produce more skilled and semiskilled workers.

Ninth. Crop control should be stopped immediately, because we may be called upon to help feed the world.

Tenth. Let us stop "fiddling" and "bickering" despite the mistakes made in the past 7 years on national defense by the present administration.

Eleventh. We should keep individual prices from getting out of line to protect the budget of American housewives. Excessive profits should be kept in abeyance if it is the wish of the American people to have no more war millionaires.

Twelfth. We must have teamwork between industry, labor, and Government.

Thirteenth. All Americans should be ready at all times to preserve, protect, and defend our liberties, ideals, and institutions.

Enemies Within

EXTENSION OF REMARKS
OF
HON. RAYMOND S. SPRINGER
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 4, 1940

Mr. SPRINGER. Mr. Speaker, while we are not at war and we do not contemplate any war with any nation, yet there are some within our borders who appear to be urging our national-defense program on the basis of preparation for war. We do not want war—we want peace! We do not want to prepare for war—we want to prepare for our own defense in case of an attack. We do not want any part in any war, either of aggression or of defense, if it can be avoided. But in the event of an attack upon our Nation our country will rise to that emergency. We will defend our Nation, our people, and our institutions to the end.

While many of our people are frightened because of the war in Europe, yet we have within our own gates those influences which are highly dangerous to our form of government and to our people; they are enemies within, and it is insignificant by what name they are called—whether the "fifth column" or other designation—these subversive influences must be detected and the development of these dangerous agencies stopped. Those who live within our gates and enjoy the freedom of our land and who profit by our institutions should revere our form of government under our Constitution. But those who come here, and who are in disagreement with our form of government—those who would seek to destroy it—should immediately return to the land from whence they came. We have no place here for those who seek to destroy—we have room only for those who would build our Nation and who would defend it in time of peril.

Mr. Speaker, I ask unanimous consent to extend my own remarks and to include therein an editorial which appeared in the Evening Star, of Washington, D. C., bearing date of June 3, 1940, which editorial follows:

ENEMIES WITHIN

Call them by whatever name one chooses—the "fifth column." Trojan-horse troopers, or just plain spies and saboteurs—there are enemies within our gates that the lessons of Norway and Holland have shown must be ferreted out and eradicated quickly and relentlessly. These enemies operate covertly and in varied guises, but they are fully as dangerous to the Nation's integrity as a frontal assault by armies in the open. Often they are aided and abetted (sometimes unwittingly) by fellow travelers and misguided sympathizers.

Obviously, the exposure and punishment of trained and subtle espionage agents and other violators of our sedition and neutrality laws constitute a job for experts. Vigilante and similar well-intentioned groups have neither the support of law nor the experience and training which are absolutely essential in investigating subversive activities. They can be of service in combating alien

propaganda and in putting the public on guard against un-American agitators, but they should leave the investigation and punishment of violators to authorized law-enforcement agencies. And there is no cause for fear that our Government is not aware of the situation, nor that it will not take effective action. The Dies committee is rendering a valuable service by throwing the searchlight of inquiry into dark and devious channels of un-Americanism; and the Federal Bureau of Investigation has thrown its full resources into the battle against the undercover forces of espionage, sabotage, and alien intrigue.

The latest evidence of aggressive action in the counter-espionage camp is the creation by J. Edgar Hoover, F. B. I. Director, of a new national defense investigation unit within his organization. Mr. Hoover has placed in charge of this important unit Hugh H. Clegg, a quiet but determined assistant who has distinguished himself in the F. B. I. war on kidnapers, bank robbers, and other desperadoes. Mr. Clegg has been "dean" of the Bureau's national police academy, in which post he has won the friendship, confidence, and cooperation of State and municipal police officers throughout the Nation. This association should be of great value in the difficult and highly responsible assignment which he now undertakes.

With such a set-up, there can be no need for any superagency to supervise the F. B. I. in its war on violators of Federal laws. The record of the G-men shows that they can be trusted to do a fearless, fair, and thorough job, without need for outside restraint. They are laboring under a serious handicap in their battle against spies, however. This is the ridiculous prohibition against tapping of wires used by alien plotters. Certainly no sensible person would consider the tapping of a spy's telephone for investigative purposes an invasion of any constitutional right. An exception by Attorney General Jackson to his too-broad order against wiretapping would remove this handicap, and the Star can see no justification for his hesitancy. Meanwhile, Congress should remove all doubt as to legality of wire-tapping in such major crimes as kidnaping or espionage by enacting legislation approving its use in cases involving human life or national security.

Mr. Speaker, we are confronted with this very important duty of making our Nation safe from within. We should profit from the experiences of Norway and Belgium and recognize the very essential and responsible duty we have to perform in order to make our own Nation safe from the hands of our own people. Every agency of government which is available and our own people should bend every effort to aid in stamping out every subversive activity within our borders. Let us make our Nation safe from the influences within, and this will strengthen us to meet any and every foe without. Let us inculcate the theme of "One for all, all for one—America" among all our people, and let us make our country safe for Americans.

National Defense

EXTENSION OF REMARKS

OF

HON. BENJAMIN JARRETT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 4, 1940

Mr. JARRETT. Mr. Speaker, the President has asked that the debt limit be again increased another billion dollars, plus, which now I understand is to be $1,200,000,000—this in addition to the $3,000,000,000 in his message of May 16. This is brought about, as the President says:

An investigation into manufacturing resources since my message of May 16 to determine the practicability of placing additional orders with industry for special material, both to provide an early expansion of existing production facilities, and to obtain increased quantities of the special weapons concerned, has caused the War and Navy Departments to submit to me an urgent and new recommendation that increased appropriations and authorizations for the national defense be made before the adjournment of the present Congress.

It is hard to believe that the War and Navy Departments did not have this in mind at the time they were considering the increase of the debt limit of $3,000,000,000 as asked by the President in his message of May 16. Again, it is strange that the Secretary of the Treasury, Morgenthau, stated before the Ways and Means Committee that last fall he appeared before the subcommittee of the Appropriations Committee and expressed his opinion that the debt limit should be increased $5,000,000,000. There was no emergency at that time—hence it makes one question, Is it all for national-defense purposes? We must remember in the past many things have been done under the guise of national defense far different than national defense as proposed by the President.

It is true that the bill states that taxes to be collected are to be used for the purposes for which raised, to wit, solely national defense, but will they be used solely for that purpose as stated by the President in his messages of May 16 and 31?

Another significant thing is that the President in his message of May 16 recognized the existence of the "fifth column" elsewhere and the treacherous use thereof, but did not, in words, recognize the existence of the "fifth column" in this country. This is strange, as it is clearly evident at every turn that one does exist in this country. And, again in his message to Congress of May 31 in which he asked for the additional $1,200,000,000 he is silent on this great danger.

When in this country, from the President down, is it going to be realized that the danger exists in this country and then do something about it? No ship can operate successfully with two captains. It seems to me that our country is just as strong as we can successfully cope with this "fifth column" activity, and I suggest that immediate steps be taken to give authority to the Federal Bureau of Investigation to increase its force sufficiently to cooperate with our colleague the gentleman from Texas, Hon. MARTIN DIES, and his committee in the remarkable work they have been doing to clean up at once this treacherous use thereof.

The President suggested in his message of May 31:

The expansion of our defense program makes it necessary that we undertake immediately the training and retraining of our people, and especially our young people, for employment in industry and in service in the Army and Navy.

May I say that we have 10,000,000 idle men and women—mostly men—a great many of these men are trained mechanics, so I do not believe we will have much of a problem to have the necessary men to carry out this program.

Again, the President states in his message of May 31:

The requirements of industry and the expanded armed forces for persons with experience in mechanical and manual fields are obviously going to be great. We do not have such trained persons in the number that will be required for the tasks that lie ahead of us if our defense is to be assured. We have, therefore, the task of training a large number in the skills and semiskills required by modern production in industry and by a highly mechanized defense force in the Army and Navy. A primary consideration in the training of skills must be not the existing distribution of workers among skilled fields but the distribution that would be required if our industrial machine and our defensive forces were fully mobilized.

May I again state that we should not worry about getting these young men trained as the manufacturers who are trained in production will look after this. Give them the orders, and they will do the job if left alone, free from Government hamstringing.

The President again, in his message of May 31, suggested:

I have instructed the representatives of the War and Navy Departments and also the representatives of the several agencies dealing with the training of young men for noncombatant services to make available to the appropriate committees of the Congress the plans and proposals which they have laid before me.

May I add again that we do not need to worry about the training of these young men for the reasons stated.

The President then, in his message to Congress of May 31, asks authority to call into active service the National Guard and Reserve personnel:

There is a specific recommendation I would make in concluding this message, that before adjournment this Congress grant me the authority to call into active service such portion of the National Guard as may be deemed necessary to maintain our position of neutrality and to safeguard the national defense, this to include authority to call into active service the necessary Reserve personnel.

This, to my mind, negatives the carrying out of the program of national defense as hundreds of thousands of these

men are skilled in various occupations necessary in national defense and they should not be called away from the part they are playing in the national-defense program unless there is an actual threat of war in this country and that possibility, as I see it, is far remote at this time. I am opposed to this increase of $1,200,000,000; it is not needed at this time. It will take years to carry out the program under the $3,000,000,000. I am strong for national defense but I do not believe in getting hysterical about it. As stated at the outstart, let us get busy and clean up the enemies of the country within, stop lukewarm opposition. Now is the time to start, although it may be a little late, before we get into the full activity of the defense program. If we do not, our program is going to be greatly interfered with.

I Dare You

EXTENSION OF REMARKS
OF
HON. WILLIAM P. LAMBERTSON
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 4, 1940

LETTER FROM MISS HARRIET HARTFORD

Mr. LAMBERTSON. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include a letter from Miss Harriet Hartford, of San Francisco, which is a brilliant summary of the situation by a woman who a year ago was a teacher in my little home town.

SAN FRANCISCO, CALIF., *May 22, 1940.*

DEAR MR. LAMBERTSON: I am so deeply concerned over the turn of national events, that I feel the need of expressing an opinion to someone in Washington.

The American people as a whole are greatly harassed over the possible fall of democracy in Europe. But democracy in the United States is being undermined by a ham actor in the White House, apparently with the unqualified approval of the public and of its duly elected Representatives in Congress as well.

When Orson Welles panicked the people of the Eastern States with his War of the Worlds broadcast, many of us were surprised that people of the supposed intelligence of the American public could be stampeded into foolish actions by a mere radio play. But when the Congress of the United States is similarly rushed by Mr. Roosevelt's 50,000-airplanes broadcast into granting him billions of dollars, which they haven't got, for an armament program, which he hasn't got, one begins to wonder whether this country deserves democracy, or is mentally and spiritually equipped to carry it on.

Mr. Roosevelt began making "I dare you" speeches directed at Germany, Russia, Italy, and Japan 2 years ago. The flying distances between Tampico, Mexico, and Kansas City, Mo., were substantially the same then as he says they are now, and the national defense must have been even less adequate. Yet, at that time, he said nothing about the necessity for 50,000 airplanes, the reason for this probably being that he was not a candidate for reelection then. Gen. Hugh Johnson's commentary on the last election was, "You can't beat $4,000,000,000." Mr. Roosevelt intends to make assurance doubly sure this time by seeing that he has many more than $4,000,000,000 to perpetuate himself in office.

A plan for national defense would seem to call for the close cooperation of military, naval, and industrial experts. Yet Mr. Roosevelt has suggested asking the cooperation of his political opponents, Mr. Landon and Colonel Knox, who admittedly have more common sense than Mr. Roosevelt but who are not experts such as the situation demands.

There is nothing in Mr. Roosevelt's previous record as President to insure the accomplishment of an adequate program for defense, even if he had one or were trying to secure one. He has failed completely to solve the problems of domestic economy with which he has been confronted. In fact, the only thing which he has accomplished with noticeable success is the deluding of the majority of the American people into the belief that he is a demigod, or at least a superman. If the voters reelect him for a third term, American democracy will be at an end, for the country will never be rid of him nor of his predatory family.

I hope that the Republican Members of Congress will do their utmost to bring to the American public a realization of this appalling fact before it is too late.

Sincerely yours, HARRIET HARTFORD.

Labor's Non-Partisan League and Where It Gets Some of Its Money

EXTENSION OF REMARKS
OF
HON. CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 4, 1940

REPORT OF INTERNATIONAL MINE WORKERS AUDITORS

Mr. HOFFMAN. Mr. Speaker, in these days we hear a great deal about the plight of the poor mine worker, his lack of representation.

Herewith is a statement showing that the $1,091,862.84 was received by the International United Mine Workers of America by way of a tax on its members.

It is small wonder that by taxing these workmen, the organization was able to contribute $44,500 to that political organization known as Labor's Non-Partisan League.

In view of the fact that some other than the officials of the organization might be interested, I append the following auditor's semi-annual report.

SIX MONTHS' REPORT OF INTERNATIONAL AUDITORS

WASHINGTON, D. C., *January 15, 1940.*

We, the undersigned auditors of the International United Mine Workers of America, having examined the books and accounts of the international secretary-treasurer, Thomas Kennedy, for the period commencing June 1, 1939, and ending November 30, 1939, respectfully report as follows:

INCOME

Tax	$1,091,862.84
Assessment	3,070.12
Supplies	3,313.55
Journal	34.38
Interest on certificates of deposit and bonds	9,125.55
District 28, transfer of funds	10,000.00
Local Union No. 2578, district 9, partial payment of loan made through district	500.00
Miscellaneous	33,850.96
	1,151,757.90

EXPENDITURES

Salaries and expenses	$477,773.46
Supplies	1,620.55
Office expenses	3,070.51
Printing	4,075.54
Journal	76,248.12
Telephone, postage, and express	7,154.33
Individual aid	418.65
Loan to district No. 4	1,500.00
Loan to district No. 6	5,000.00
Loan to district No. 7	3,400.00
Loan to district No. 9	10,000.00
Loan to district No. 14	4,000.00
Loan to district No. 15	2,000.00
Loan to district No. 16	1,250.00
Loan to district No. 17	40,000.00
Loan to district No. 18	2,500.00
Loan to district No. 19	178,652.57
Loan to district No. 20	10,000.00
Loan to district No. 21	4,000.00
Loan to district No. 23	16,690.00
Loan to district No. 30	5,000.00
Loan to district No. 31	4,000.00
Loan to district No. 50	17,000.00
Total loans	304,992.57
Congress of Industrial Organizations, taxes	180,000.00
Labor's Non-Partisan League, contribution	44,500.00
Metcalf, Mahan & Mahan, reporter services	881.55
Gillespie, Burke & Gillespie, attorneys, salary and expenses	2,755.67
General miscellaneous as itemized in international secretary-treasurer's report	398,897.79
Total	932,027.58
Total expenditures, including loans	1,502,388.74

RECAPITULATION

Amount on hand June 1, 1939	$2,877,381.33
Income June 1, 1939, to Dec. 1, 1939	1,151,757.90
	4,029,139.23
Expenditures June 1, 1939, to Dec. 1, 1939	1,502,388.74
Amount on hand Dec. 1, 1939	2,526,750.49

BANK STATEMENTS

Amount on deposit, Thomas Kennedy, secretary-treasurer, United Mine Workers of America, including cash	$869,579.59
Amount on deposit, international executive board, United Mine Workers of America, including bonds	1,669,780.70
	2,539,360.29
Checks outstanding	12,609.80
Amount on hand Dec. 1, 1939	2,526,750.49

We have in our possession a certified statement from each bank in which our deposits are held showing that the amount stated in the report is on deposit in the several banks.

Respectfully submitted.

WILLIAM FOSTER,
ARCHIE V. WOODS,
MICHAEL MEDVITZ,
International Auditors, United Mine Workers of America.

Further Support for H. R. 8748—Jones-Wheeler Farm Credit Bill

EXTENSION OF REMARKS
OF
HON. JERRY VOORHIS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 4, 1940

Mr. VOORHIS of California. Mr. Speaker, further petitions urging support of the Jones farm credit bill have been received from farmers and growers in my district and throughout southern California. I am glad to include with my remarks the text of these petitions and the names of the farmers signing them. It is important to remember that agriculture faces a most serious situation as a result of this war and the curtailment of its markets. We have no right to forget or neglect the problems of our people in our anxiety over foreign affairs and national defense. A "bold peasantry" is not only a "country's pride" but also perhaps the most important single element in national strength which is national defense in its fundamental aspect.

To the Honorable JERRY VOORHIS,
House of Representatives:

We, the undersigned, being borrowers of the Federal land bank and/or the Land Bank Commissioner, do hereby request your whole-hearted support of H. R. 8748—JONES, and we urge you to exert your efforts to secure its passage for the following reasons:

1. We believe the interest rates on Federal land-bank and Land Bank Commissioner loans should be permanently reduced;

2. We believe Federal land-bank borrowers should be relieved of stock liability;

3. We believe the functions and responsibilities of national farm-loan associations should be increased;

4. We also believe that the objections to this bill as voiced by its opponents are exaggerated.

Labor and Unemployment

EXTENSION OF REMARKS
OF
HON. ROBERT F. WAGNER
OF NEW YORK
IN THE SENATE OF THE UNITED STATES

Wednesday, June 5 (legislative day of Tuesday, May 28), 1940

ADDRESS BY GEORGE MEANY AT INTERFAITH CONFERENCE ON UNEMPLOYMENT

Mr. WAGNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very thoughtful

address entitled "Labor and Unemployment," delivered by George Meany, secretary-treasurer of the American Federation of Labor, at the Interfaith Conference on Unemployment on June 4, 1940.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Men of good will, representative of many interests, many pursuits, and many faiths among American people, have gathered here today to survey the problem of continuing and persistent unemployment in their midst. They have come here to hold common council on our foremost national problem at a time when the world is lashed by the storm of warfare.

The breath-taking speed of world developments, the very suddenness with which we have been brought face to face with the necessities for national defense, have blurred our understanding of the implications and consequences of unemployment, have confused the issue, have, in fact, shifted the problem itself out of focus of national attention. These developments have aroused in the ranks of labor a growing and insistent realization that the Nation must not permit itself to be blinded to the basic want of its people by the lightning flashes of aggressive warfare abroad, that the roll of thunder of destruction must not drown out the call for remedy of our most fundamental organic need.

On the ability of the American people to end unemployment depends the future course of our Nation and the very survival of our democratic institutions. The strength of a democracy must be measured by the strength of all its citizens. Our political and social fabric is only as strong as the cloth in the shabby coat of the worker to whom society has so long denied the opportunity to earn a living. The idleness of men, machines, and capital has been eating into the very texture of our society for the past 10 years. Economic fabric which is not strong enough to withstand the tug and strain of conflict of peacetime forces cannot withstand the stress of wartime emergency. Our economy must be brought to full activity, for it is our economic strength which will determine our national strength. Full employment must be attained before all else. Industrial disorder and social unrest cannot be permanently eliminated until and unless unemployment is stamped out.

The job which is to be done and which we shall do is one which calls for earnest and practical cooperation of labor, management and the Government. The time has come for us to demonstrate to the world that a more thorough job in liquidating unemployment, one which yields lasting and permanent results, can be achieved through genuine teamwork of labor and management in advancing toward a common goal. This we can do if we define our goal and develop a common agreement as to the most effective methods of attack as well as the rights, obligations, and duties of each group. A general agreement as to our objectives must be made specific. A general accord as to what is to be done must be reduced to a concrete program, a week-by-week schedule necessary to carry out and complete the task. As long as one of the groups fails in its responsibility toward the others, as long as one of the teammates refuses to accord to the other his rights, no matter how great our zeal and how feverish our effort, we cannot succeed. First and foremost, therefore, is the need for a complete and unequivocal understanding between labor and management on what is to be done and how to do it.

Let us determine the size of the task before us. What is the extent of our unemployment today? On the basis of the data available from Government sources, the American Federation of Labor estimates that more than 10,000,000 persons are still without normal private employment today. This means that more than 10,000,000 wage earners in industry, agriculture, and trade are denied opportunity to earn a living through productive activity.

Several unemployment estimates have been maintained by different agencies and institutions over a period of years. Some of these estimates place the figure of total unemployment considerably higher than our estimate, while others estimate the unemployment to be slightly less. Allowing for the differences due solely to the varying definition of unemployment and the consequent inclusion or exclusion of certain groups, all of the estimates continued over a period of years by reputable institutions show amazing similarity in their final results.

Despite this fact there are those who insist that unemployment is practically nonexistent and that these estimates are a mere flight of fancy of those who make them. The final answer to these allegations will be found in the 1940 census which is now being completed. But even before the census results become available we can rest our case not only on the reasonableness and reliability of our method of making the estimate, but also on many indisputable factual sources which substantiate our general conclusions. In 1937, when business and industrial activity exceeded the 1939 levels, a voluntary registration of those unemployed showed that in the country as a whole more people were unemployed than our estimate counted at the time. The active file of the United States Employment Service, despite the extremely incomplete and limited coverage of employment-service facilities, contains a register of more than 6,000,000 people actively seeking work. This and much other corroborating evidence cannot be lightly brushed aside any more than the known and very real presence of unemployed wage earners in individual communities can be overlooked.

More and more often we hear in public discussion and read in newspapers the opinion that not only the amount of existing unemployment is grossly exaggerated, but that those who are unemployed don't really want work and are not seeking employment. Such allegations may merely reflect the wishful thinking of those far removed from the plight of the men in the street, those who close their eyes to the realities distasteful to them and shirk their responsibility in providing a remedy. Or sometimes such expressions are carefully and cleverly calculated by special pleaders to confuse the real issues and to conceal the real facts.

What are the real facts? Do the unemployed hunt for jobs, or do the jobs hunt for the unemployed? Recently the Department of Sanitation of the city of New York announced that 2,500 jobs will be available under civil service for "sanitation men." Not less than 85,000 men applied for these 2,500 jobs and by March 1940, 75,000 had taken the civil-service written examinations to qualify for physical examinations still to be held.

The Brewster Aeronautical Corporation announced last February that it would interview applicants for 250 jobs to be made available at its new aircraft plant in Newark. To tell you what happened, I'll quote from the account published in the New York Times:

"Special to the New York Times.

"NEWARK, N. J., February 26.—Nearly 20,000 job seekers, some of whom had been shivering in the chill blasts of the meadowlands here since 1 a. m., besieged the Brewster Aeronautical Corporation at Newark airport this morning.

"Amazed at the turn-out, officials of the company announced that only 250 jobs were available, which would be filled for a month. Within 6 months, they said, the force would be increased to 1,500. The concern, which has a plant in Long Island City, recently leased the municipal hangar here for the manufacture of aircraft. * * *

"A vanguard began to assemble at 1 a. m. The chill darkness became dotted with fires that were later extinguished by airport police, who feared damage to the hangar. The early birds then huddled against the lee of the giant shed.

"By 6 a. m., 2 hours before the company opened its offices, thousands were packed around the hangar. As the morning drew on highways became jammed with automobiles bearing job hunters. Traffic was snarled for several miles north and south of the field. * * *

"By opening time the crowd grew so big that 40 policemen, under Deputy Chief Frank Brex, including detectives, members of the emergency squad and radio, mounted and motorcycle officers, were required to handle it. Part of the crowd stormed the airport administration building in the belief that the hiring was being done there.

"The throng was generally peaceful, but eagerness and numbers combined to produce sporadic incidents. One man fainted as he was being squeezed through the hangar's main entrance, the steel door of which had been torn from its hinges.

"A city employee, who was distributing applications, was saved from a tramping by two ironworkers, who hoisted him into a truck. A group was about to use a beam as a battering ram against another door of the hangar when it was stopped by police."

These are just two examples, but they could be multiplied by examples taken from every community in every part of the country. They prove beyond dispute that the demand for jobs by the unemployed is very great. The desire of those unemployed to find work and to earn a decent living in private industry is as genuine as the distress of unemployment and the anguish of insecurity suffered by them and their families.

Conscious of the size and crucial importance of the task before us, I wish to place before you on behalf of the American Federation of Labor a practical, constructive program to end idleness of workers, machines, and capital. It is my earnest hope that this plan will receive not only your wholehearted endorsement, but also active participation in carrying it into effect. Our proposal consists of seven points.

1. A long-range program of permanent public works, planned in advance, which could be expanded and curtailed to offset fluctuations in private-construction activity.

A public-works program, planned in advance and based on the long-range evaluation of the requirements of growth of individual communities as well as of the entire Nation, would add infinitely more to our wealth and resources than any temporary-emergency program. We, therefore, propose the creation of a permanent public works planning board which could formulate in advance a long-term plan of public-works projects and determine the basis on which the program could be curtailed and expanded to offset fluctuations in private-construction activity and take up the slack in private employment.

Labor believes that considerations of national defense make the need for such a program immediate and urgent. Under such a program immediate priority should be given to projects which are called for by defense needs, and which will be of continuing peacetime value to the Nation. To this end we propose the construction of coastal and transcontinental express highways which are not only essential for the purposes of national defense by facilitating mobility of troops and defense weapons, but are also important as a means of stimulating business activity by providing the heretofore unavailable transportation, trade, and travel facilities. We also recommend the construction of additional airport facilities through public works projects. Such projects are vital to national defense and necessary to further progress of our commercial aviation. Con-

struction of hospitals and other public buildings urgently needed for defense as well as for welfare purposes should also be given prior consideration.

2. Continuation and expansion of slum-clearance and low-rent housing program administered by the United States Housing Authority and utilization of this program for construction of industrial housing necessitated by defense production.

The present U. S. H. A. program, by providing low-rent housing to needy families living in slums, goes straight to the heart of our most urgent economic need. At the same time the present low-rent housing and slum-clearance program has proved to be not only the most effective, but also the most economical employment program. It provides work on construction of residential housing under private contract—providing jobs where the lag in employment has been the greatest. In addition to 500,000 jobs in private building which the renewal of the present program would provide, such renewal would give employment to 750,000 workers in related building materials trades and industries.

Continuation of the U. S. H. A. program at the present pace is equally important from the standpoint of defense production. Concentration of industrial activities in centers of specialized production will necessitate the building of accommodations for workers flocking to these communities. The need should not be met by the building of temporary shacks and cantonments which blight the community and tend to create new slums. Experience of the U. S. H. A. in the construction of workers' housing, its knowledge of each local problem will make possible, in place of barracks, construction of good industrial housing with extreme speed and with assurance that this housing will not be a total loss at conclusion of emergency but a permanent asset, available to low-income families in the future. Labor, therefore, recommends the renewal of the U. S. H. A. program as provided in the Wagner-Steagall amendments to the United States Housing Act which already passed the Senate.

3. A program of Federal insurance of long-term loans made by private lending institutions for productive expansion.

This plan is proposed by the American Federation of Labor to provide a productive outlet for pent-up savings by partial insurance by Federal Government of private loans for production, approved on the condition that minimum competitive and labor standards be met.

Large-scale reemployment in private industry cannot be achieved without putting to work the investment capital which now lies idle. During the past decade capital outlays within the going industrial plants have been far below normal. Lack of long-term confidence sufficient to undertake the risk involved in the employment of venture capital has restricted new investment outlets for idle funds. Potential opportunities for productive employment of men and money are enormous.

To translate these opportunities into reality we need machinery which would facilitate the flow of private funds into new or expanded private enterprise. Instead of Government loans to industries, as a substitute investment channel, we believe preferable a method which would make available to industry private investment funds for activity most productive of employment.

Federal insurance of private loans for production would enable the Government to introduce the element of long-term stability where the absence of such stability has prevented expansion to date. We propose that the already available machinery of the R. F. C. be utilized in the administration of this program so that it could be administered at practically no additional cost to the taxpayer.

I believe that this proposal of the American Federation of Labor is the first one to provide an answer to the most baffling problem of recovery and industrial expansion. To the success of this program the American Federation of Labor pledges its support and active cooperation.

4. Maintenance of the minimum-wage and maximum-hour standards and improvement of wage and hour standards through collective bargaining to insure full measure of reemployment and increase real purchasing power to those who work.

In the presence of an immense reserve of unemployed workers there is no justification for the weakening of the existing statutory standards of hours of work. Maximum-hour requirements under our laws allow great flexibility, and none of these laws places a rigid limit on the length of the workweek or workday. Both the Fair Labor Standards Act and the Walsh-Healey Public Contracts Act merely require that overtime compensation be paid for excessively long hours of employment. Labor believes that these laws do provide the necessary basic standards determining the length of the workweek in industry. Shortening of the hours of work is essential to achieve reemployment. Basic statutory standards, together with unrestricted right of collective bargaining, will go a long way to facilitate reemployment in industry.

5. A national program of vocational and apprentice training based on national minimum standards developed by agreements of representative groups concerned.

Despite widespread allegations of labor shortages in certain occupations, the available facts demonstrate conclusively that in every instance there is still a large surplus of unemployed workers with skill, training, and experience necessary to fill the job. Geographical distribution of available labor may be such as to create a temporary lack of readily available workers in exceptional situations.

Labor fully recognizes the need for a sound vocational education and apprentice-training program to enable the young men and women coming into industry to equip themselves for productive activity. Such training can only be useful when it is definitely related to specific employment opportunities. Workers cannot be trained in a vacuum; nor should men be apprenticed to skills in which no immediate prospect of employment exists. These considerations make it imperative that the problem of vocational education and apprentice training be approached nationally and be developed by active participation through national representatives of labor and management groups concerned in each problem.

6. Enlargement and improvement of job-placement facilities of employment services.

In carrying out a reemployment program, it is of paramount importance to create facilities for bringing together the worker and the job for which he is best fitted. With each spurt of industrial production, we have witnessed mass tragedies of workers flocking to active production centers far in excess of the current requirements. Masses of stranded workers in these situations become a burden to the community and at the same time prevent their employment in other centers of production where new activity develops. Thus, it is possible in times of expanding production that with a large surplus of labor in one community or one section of the country a shortage in a specialized occupation may develop at another point. Substantial enlargement of existing employment-service facilities must therefore play an integral part in a national program of reemployment.

7. Full measure of relief to workers and their families as long as these workers remain unemployed.

Labor considers it fundamental that until our Nation achieves full employment wage earners and their families be given adequate assistance by the community. A full and adequate program of Federal and local relief to the unemployed is therefore essential to any plan of recovery and reemployment.

Continuing unemployment is the most dangerous breach in our national defense. Forced idleness of millions of productive workers on whom their families depend for livelihood, saps the strength of the entire Nation, eats deeply into the moral and spiritual fiber of the people, and undermines their will to achieve.

National defense means not only the defense of lives, homes, communities, and resources. To the American people, national defense also means the defense of their democratic institutions, the defense of government by consent and, above all, the defense of those fundamental rights we have inherited and established as a living democracy and which make up the American way of life.

Production of implements of defensive warfare must be carried out with unstinted cooperation of all. Yet we must not forget that production of implements of war, while it adds to our national strength, contributes little to our national wealth. Jobs created by accelerated defense production are not normal jobs. We must not mistakenly consider reemployment generated by such emergency production as lasting, normal, or permanent reemployment. It is of foremost importance that national recognition be given today to a simple fact that a temporary spurt in employment called forth by munitions production not only fails to solve the unemployment problem but will only aggravate the task of readjustment which the Nation will face when the emergency is over and when our economy resumes its peacetime pace. That is why labor believes it so important that in our defense efforts we do not lose sight of our future, normal peacetime needs. In building production plant and equipment, in constructing hospitals, in building defense highways, in providing housing facilities for munitions workers, we must so plan our work as to make sure that these plants, these highways, and these houses will become permanent assets to the community and to the Nation so that they will add to our national wealth as well as to our national strength.

American labor and management in facing the problem of unemployment are facing the most difficult and the most responsible task of this generation. I feel confident that their united will shall provide our Nation with united strength to emerge victorious in this great effort.

Relief—National Defense

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Wednesday, June 5 (legislative day of Tuesday, May 28), 1940

LETTERS FROM THE CITIZENS BUREAU OF MILWAUKEE, WIS., AND DR. A. T. RASMUSSEN

Mr. WILEY. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD the text of a letter recently written by the Citizens' Bureau of Milwaukee. It presents a plan in relation to assistance for the W. P. A. workers. It specifically shows how such a plan would work

in Milwaukee in comparison with the present W. P. A. plan. It also shows the need for a change in the direction suggested, because in Milwaukee, as elsewhere in the Nation, real-estate taxes are becoming so burdensome that people cannot take care of the load.

I also ask unanimous consent to insert in the RECORD a letter from a citizen of my State, showing how the average citizen feels about the necessity of obtaining airplanes for a more adequate defense.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

CITIZENS' BUREAU OF MILWAUKEE,
May 21, 1940.

The Citizens' Bureau endorses the plan now being considered by Congress to abandon W. P. A. and substitute a system whereby the Federal Government would pay 75 percent of the cost for general relief administered by the local governments.

This is how such a plan would have operated in Milwaukee County in 1939:

During 1939 there was an average of 19,600 persons employed on W. P. A. projects in Milwaukee County. The Federal Government paid $16,690,000 for wages and materials. In addition, there was paid $4,811,000 from local taxation consisting of $4,111,000 as the sponsors' contributions, and $700,000 paid by the general relief department to supplement cases in which the families were so large that the W. P. A. wages were not sufficient. The total expenditure of $21,501,000 for W. P. A. amounted to $1,097 per case.

General relief (exclusive of W. P. A. supplementation) averaged 18,500 cases, and cost a total of $6,436,000, financed from local funds at an average of $348 per case.

The total costs for W. P. A. and general relief of $27,937,000 were therefore paid $16,690,000 by the Federal Government and $11,247,000 paid by local governments in Milwaukee County.

If the 19,600 cases on W. P. A. employment (includes relief and nonrelief cases) had been cared for by the general relief department, the cost would have been $6,821,000. The total cost of general relief would then have been $13,257,000 for 38,100 cases at $348 per case.

Under the proposed program the Federal Government would have paid three-fourths of the $13,257,000 cost, or $9,943,000. The local governments would have paid one-fourth, or $3,314,000.

The Federal Government would therefore have saved $6,747,000 and the local governments would have saved $7,933,000. The cost of the entire program would have been cut almost in half, that is, from $27,937,000 to $13,257,000, a total saving of $14,680,000.

We are enclosing a copy of a report issued by the Citizens' Bureau in April of 1938 in which we urged a public-works program instead of made work. This report pointed out that the increased cost of relief had forced local governments in Milwaukee County to reduce their regular public-works program from $15,600,000 a year down to $2,000,000 thereby putting 10,000 men out of work.

As you know, Federal regulations do not permit the employment of W. P. A. labor to carry out the usual maintenance and operation work of local governments. The result has been made work. On page 3 of the above-mentioned report the Citizens' Bureau states:

"Made work belittles and degrades the idea of work. It operates unjustly from the standpoint of relief administration. The single person and the head of a family of eight are both given the same wage."

The reduction of $7,933,000 in local taxation for relief purposes would allow this community to spend considerable of that money in needed public works.

The tax rate of the city of Milwaukee now amounts to $37.81 per $1,000 of the local assessed valuation for all purposes (city, county, schools, etc.). At the present writing it seems inevitable that there will be an increase next year of $2.50 per $1,000 due to the relief situation. This would mean the unprecedented tax rate of $40.31 in 1941.

Respectfully yours,

CITIZENS' BUREAU OF MILWAUKEE,
WALTER H. BENDER,
President.

LA CROSSE, WIS., *June 3, 1940.*

ALEXANDER WILEY,
The Senate, Washington, D. C.

MY DEAR SENATOR: You undoubtedly saw, as I did, Henry Ford quoted in the press as saying that the Ford Motor Co. could within 6 months manufacture airplanes for the United States Government at the rate of 1,000 per day and at one-eighth of the present cost, provided they were given expert advisers and no political interference.

I urge you to look into this, for, as one entrusted with the responsibility that is yours, you certainly owe it to our country to do all within your power to see that adequate defense measures are taken and that we get the last bit of value for every dollar expended. Further, If Mr. Ford is correctly quoted, his statement should not be lightly taken, for he has shown in the past that he knows how to produce in quantity and at a fair price. Admittedly his methods and ability made automobiles possible for most of us. Mr. Ford should certainly be consulted in the present situation and his advice given serious consideration. This is a time when we need efficient production, honest administration, and no politics.

I trust that you and your colleagues in Washington will give this your immediate and earnest attention.

Very sincerely yours,

A. T. RASMUSSEN.

America's Attitude Toward the Allies

EXTENSION OF REMARKS
OF
HON. ROBERT R. REYNOLDS
OF NORTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Wednesday, June 5 (legislative day of Tuesday, May 28), 1940

ARTICLE BY MRS. WALTER FERGUSON

Mr. REYNOLDS. Mr. President, I ask unanimous consent to have inserted in the Appendix of the CONGRESSIONAL RECORD a very interesting article by the pen of Mrs. Walter Ferguson, a columnist for the Washington Daily News, under the heading of One Woman's Opinion, which pertains to the present chaotic condition in Europe and relates particularly to our interest.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Daily News]

ONE WOMAN'S OPINION

(By Mrs. Walter Ferguson)

As the fortunes of war seem to favor Hitler, a good many Americans, famous and obscure, say we should lend money to the Allies. They believe we ought to furnish them with war materials on credit.

No man need be ashamed of the sentiment, and certainly we cannot quarrel with any man's right to express it. Only we wish these people would voice their opinions in the proper words.

With the Allies owing us several billions for the last war, isn't it rather visionary to talk about lending them more to fight this one. Let us be honest with ourselves and, if that's the way we feel, give them outright the money and goods they need in order to carry on the struggle.

No boy's life is ever paid back. Thousands of fine American lads went to Europe in 1917. We gave generously of their blood, expecting nothing half so precious in return. We did not demand a life for a life, and were not too disappointed when we failed to receive a dollar for every dollar we contributed to the cause of human freedom.

All that generous outpouring was a noble gesture, nothing more. Beautiful, but futile. Nevertheless, we are convinced, no true American regrets that it was made. It was done because the people then living honestly felt that good would come.

Yet only evil has resulted. Many of our boys and dollars never came back. Some of us managed to work up poetic sentiments about the fact, or could, until the same martial piping began to sound upon the wind. Now the time has come to speak candidly.

Altruists who wish to lend to the Allies are building a camouflage of words to hide the truth. For lending, in this instance, can only mean giving. And if we are so sure the Allied cause is ours, and believe its loss means our downfall, then how shabby it is to talk about lending them money. Let's give them cash and war materials, asking no security in return. Certainly we owe that much to those who are fighting our war—if it is our war.

The Miracle of Lawmaking

EXTENSION OF REMARKS
OF
HON. JOSHUA L. JOHNS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 5, 1940

EDITORIAL FROM THE GREEN BAY (WIS.) PRESS-GAZETTE

Mr. JOHNS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from

the Green Bay Press-Gazette, of Green Bay, Wis., for May 25, 1940:

[From the Green Bay (Wis.) Press-Gazette of May 25, 1940]

THE MIRACLE OF LAWMAKING

For 2 full days the right honorable Members of the House of Representatives had debated the wage-hour bill, how low down to put the floor, how high up to raise the ceiling, where to provide the belfry for the bats, and what, if anything, to use for walls.

The House was particularly concerned with the proposal to repeal a part of the original act passed at the behest of our noble President which provided that neither floor, ceiling, walls, nor consideration should be given.

"To any individual employed within the area of production (as defined by the Administrator) engaged in handling, packing, storing, ginning, compressing, pasteurizing, drying, preparing in their raw or natural state, or canning of agricultural or horticultural commodities for market, or in making cheese or butter or other dairy products."

This had been the eminent and upright provision of spotless whiteness inserted in the law so that those in agricultural pursuits would not have to ring a time clock when they started in the morning and when they checked out at night.

It wouldn't be quite right to make every man in agriculture or on the edge of it hire bookkeepers just to keep track of all the data required by every employer.

But after the full 2 days of debate the right honorable Members of the House listened to this summation by Congresswoman NORTON, chairman of the committee that was to make the floor solid and the ceiling rainproof. The CONGRESSIONAL RECORD shows the following interesting debate:

"Mrs. NORTON. We have spent 2 days debating this bill and are about where we were at the beginning. * * * I am proud of the fact that the House went on record yesterday as not approving a bill that would take from the poorest workers a miserable 30 cents an hour. * * * But, Mr. Chairman, there are many more exemptions than I would like to see there. I am unalterably opposed to exempting anyone from 30 cents an hour. So at the proper time there will be an amendment offered to strike out the exemptions on page 15.

"Mr. MCCORMACK. I am hopeful that the gentlewoman from New Jersey will submit a unanimous-consent request that all debate on her bill close at 3 o'clock, 4, or somewhere around there.

"Mr. BUCK. I endeavored to catch the meaning of the gentlewoman's suggestion that she would offer an amendment to strike out the language on page 15. Is that correct?

"Mrs. NORTON. That is right. That is the only part of the bill that exempts the wage provisions of the act.

"Mr. BUCK. In other words, the gentlewoman desires to withdraw such protection as now exists to agricultural labor entirely?

"Mrs. NORTON. Oh, now, the gentleman knows perfectly well what I have in mind.

"Mr. BUCK. I do not know. I am asking the gentlewoman whether she wants to do that or not.

"Mrs. NORTON. I stated very plainly I intended to offer an amendment to strike out the section.

"Mr. RAYBURN. It is my interpretation that the part of the bill that the gentlewoman is proposing to offer an amendment to strike leaves out this so-called area-of-production provision in the original act?

"Mrs. NORTON. That is true; and the area-of-production provision is left out in the substitute.

"Mr. RAYBURN. I thought the gentlewoman was going to offer an amendment to strike out 13 in its entirety.

"Mrs. NORTON. I misunderstood the gentleman's question.

"Mr. RAYBURN. Just what does the gentlewoman from New Jersey intend to strike out?

"Mrs. NORTON. I intend to strike from the wage provision of the bill all of those things that are listed, among other things, 13.

"Mr. RAMSPECK. Will the gentlewoman point out what language in the bill she suggests be stricken out?

"Mrs. NORTON. Page 15, line 15, section 13A, down to and including 'tobacco', in line 4 on page 16.

"Mr. RAMSPECK. I am sure the gentlewoman from New Jersey has not considered the fact that if this language is stricken out, the area of production is restored to the law.

"Mrs. NORTON. That was not my understanding.

"Mr. RAMSPECK. I am sure that the gentlewoman does not intend that the committee bill have eliminated from it the repeal of the area of production.

"Mrs. NORTON. I agree with the gentleman entirely in that.

"Mr. RAMSPECK. Then the gentlewoman does not want to strike out from this committee substitute the language she mentioned.

"Mrs. NORTON. The gentleman is correct. I see I have made a mistake. We will strike out, on page 15, line 13, all after the word 'or', down through and including the word 'tobacco' on page 16, line 4.

"Mr. RAMSPECK. There are four provisions there which eliminate both wages and hours. I am sure the gentlewoman does not want to strike that out.

"Mrs. NORTON. No; the gentleman is correct. As I stated before, I was a bit confused about the line. May I say that my only intention is to prevent any worker from getting less than 30 cents an hour.

"Mr. RAMSPECK. All these agricultural duties are exempt from both wages and hours at present, but the committee would repeal that provision and substitute for the language which puts some of those operations under the wage provision but gives them a 60-hour week. If I understand the chairman of the committee, she proposed to eliminate from this provision the telephone operator in the small exchanges, the fresh fruit and vegetables exemption, and the tobacco exemption. Is this a correct statement of what you propose to do?

"Mrs. NORTON. Yes.

"Mr. RAMSPECK. But there are a good many other exemptions in section 13.

"Mr. BARDEN. In other words, if the amendment suggested is adopted, agriculture would lose practically every exemption that now exists in the law. Is not that right?

"Mrs. NORTON. Is it not a fact they would simply lose the wage provision and not the hour provision?"

After several more pages, in fact about 20, of this effort to find out how far down in the basement the floor had been located and how far above the rafters the ceiling had been left, Mr. BURDICK, of North Dakota, with both a sense of humor and a sharp and intelligent eye, observed:

"I usually pride myself on having some intelligence, at least enough to be properly identified as 'man' in the animal kingdom. But I confess that my mind is not entirely settled or clear as to what we are doing or intending to do. We started with the Barden bill, but before we could find out what that bill was we substituted the Ramspeck bill for parliamentary purposes only. No one attempted to tell us what that bill is or was or has been. We found our time limited and made a short cut, and, while we should have debated the Barden bill, we have been debating the Norton bill, which the author said was not her bill, so I am not sure whose bill we have been debating.

"The only author to manfully acknowledge the parentage of his bill was Mr. BARDEN, but since we have not discussed his bill, but other bills, I still do not know whether or not he is to be congratulated. He now does not know what is in his bill, because while we have discussed the Norton bill, we have amended the Barden bill. And he is completely exhausted in defending his bill, which we have not debated at all. All admit we are now back where we started, only further back. It looks to me like a 30-yard penalty for holding.

"My mind is fully at rest and my conscience clear on this piece of legislation, and I am prepared to vote—for which bill, for which title or subtitle, which substitute, I do not know. I have come, however, to one very important conclusion; I am going to vote."

And when the vote took place no one thereafter can tell what was meant by the language employed since those involved didn't have any idea themselves. It will become appropriate to call the court to order and to give the judges the supreme task of "interpreting" the act of Congress which no one in Congress can interpret.

But the floor will look lovely. It will have the sheen of smooth cement. And the ceiling will sparkle in the sunshine with little flecks of glass sprinkled over it to give the appearance of diamonds.

What matter if the floor is cardboard ready to cave in as soon as anyone steps on it? What matter if the ceiling is tissue paper ready to blow away as soon as a gentle wind comes up from the south? It's all a pretty picture anyway. And picture count.

Sweetpotatoes—Sugar

EXTENSION OF REMARKS

OF

HON. RENÉ L. DEROUEN

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 31, 1940

STATEMENT OF HON. RENÉ L. DEROUEN, OF LOUISIANA, BEFORE THE AGRICULTURE SUBCOMMITTEE OF THE COMMITTEE ON APPROPRIATIONS

Mr. DEROUEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herein my testimony before the agriculture subcommittee of the Committee on Appropriations on the subjects of Rehabilitation of the Sweetpotato Industry and Sugar—the Chlorotic Streak, a Virus Disease Threatening Louisiana Sugarcane, both of which industries add greatly to the State's annual income and furnish employment for hundreds of thousands of persons who might otherwise be on the relief rolls.

REHABILITATION OF THE SWEETPOTATO INDUSTRY—STATEMENT OF HON. RENÉ L. DEROUEN, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF LOUISIANA

Mr. DEROUEN. Mr. Chairman, and members of the committee.

Mr. CANNON. Mr. DeRouen.

Mr. DEROUEN. I am appearing in behalf of an agricultural commodity that perhaps we have never helped very much or appropriated any money for, and that is the rehabilitation of the sweetpotato industry throughout 22 States. I have a list here of the

production by States and years, the acreage harvested the yield per acre, the production and the value of production, which I would like to include in the record if it is agreeable, Mr. Chairman.

Mr. CANNON. How many pages does it cover, Mr. DEROUEN?

Mr. DEROUEN. It is very short.

Mr. CANNON. That may be included in the record.

Mr. DEROUEN. I secured this from the Department of Agriculture. The table referred to is as follows:

Sweetpotatoes

State	Acreage harvested			Yield per acre			Production			Value of production	
	Average 1927–36	1937	1938	Average 1927–36	1937	1938	Average 1927–36	1937	1938	1937	1938
	Acres	*Acres*	*Acres*	*Bushels*	*Bushels*	*Bushels*	*Bushels*	*Bushels*	*Bushels*		
New Jersey	14,000	17,000	14,000	137	142	105	1,980,000	2,414,000	1,470,000	$1,714,000	$1,470,000
Indiana	4,000	4,000	3,000	103	125	115	398,000	500,000	345,000	475,000	310,000
Illinois	6,000	6,000	6,000	85	85	108	501,000	510,000	648,000	388,000	356,000

Delaware	7,000	6,000	5,000	127	130	100	865,000	780,000	500,000	491,000	350,000
Maryland	8,000	8,000	8,000	144	125	130	1,205,000	1,000,000	1,040,000	640,000	780,000
Virginia	37,000	39,000	34,000	116	130	105	4,282,000	5,070,000	3,570,000	3,042,000	2,142,000
North Carolina	83,000	80,000	81,000	97	96	108	7,915,000	7,680,000	8,748,000	5,683,000	5,686,000
South Carolina	58,000	57,000	66,000	85	90	80	4,898,000	5,130,000	6,468,000	3,796,000	4,204,000
Georgia	109,000	114,000	123,000	74	75	75	8,001,000	8,550,000	9,225,000	8,806,000	7,841,000
Florida	22,000	21,000	20,000	72	65	70	1,548,000	1,365,000	1,400,000	1,324,000	1,330,000
Kentucky	20,000	24,000	24,000	82	90	95	1,639,000	2,160,000	2,280,000	1,771,000	1,710,000
Tennessee	57,000	55,000	53,000	90	102	103	5,126,000	5,610,000	5,450,000	3,815,000	3,275,000
Alabama	86,000	100,000	107,000	83	88	80	7,071,000	8,800,000	8,560,000	8,272,000	6,848,000
Mississippi	74,000	82,000	87,000	94	92	89	6,819,000	7,544,000	7,743,000	6,563,000	5,807,000
Arkansas	37,000	37,000	43,000	78	95	75	2,828,000	3,515,000	3,225,000	2,847,000	2,419,000
Louisiana	92,000	90,000	99,000	71	73	70	6,494,000	6,570,000	6,930,000	4,533,000	4,504,000
Oklahoma	18,000	17,000	21,000	77	70	70	1,298,000	1,190,000	1,470,000	1,226,000	1,250,000
Texas	64,000	52,000	58,000	40	72	75	4,748,000	3,744,000	4,350,000	3,519,000	3,262,000
California	11,000	11,000	13,000	102	111	117	1,108,000	1,221,000	1,521,000	1,734,000	1,673,000
United States	824,000	840,000	883,000	86.1	89.3	86.8	70,274,000	75,053,000	76,647,000	62,186,000	56,482,000

[1] The 1938 price and value figures are preliminary.

Mr. DEROUEN. Then I have another record showing the losses that have occurred due to field losses, storage losses, black-rot losses, and wilt losses.

Mr. CANNON. Yes; that may be included in the record.

The table referred to is as follows:

Sweetpotatoes—estimated losses from diseases

	5-year average 1928–32		1936–37	
	Bushels	Value	Bushels	Value
Field disease losses (all diseases)	6,497,500	$5,652,830	7,900,000	$6,840,000
Storage losses (all diseases)	7,915,380	6,826,380	2,670,000	2,310,000
Black-rot losses	2,678,000	2,330,190	----------	----------
Wilt losses	1,963,620	1,708,350	----------	----------

Loss, $16,517,750.

Mr. DEROUEN. I would like to have both of those included in the record, because they are from the Department. This is an agricultural commodity which we believe, through experiments in our university, could be rehabilitated and brought up so that it would bring in a good revenue to the farmers in the form of adding to the diversification of their farm products.

In the scientific experiments we have carried on, progress has been made by mutation and asexual breeding of sweetpotatoes causing them not only to bloom but seed as well, which is something new. I do not think we have ever done that in this country before. Now, you might ask, "Why was that necessary?" Sweetpotatoes have a tendency to acquire the diseases that are in the land and that is the only means by which we can control diseased roots, soil and stem rot, and other diseases and insects.

Then, we have gone further than that. Experiment has shown we can control the size of the potato, making it more uniform, and also increase the nutritive or food value of the potato, such as dextrine and sucrose, and other elements.

Mr. LEAVY. Mr. DEROUEN, are you actually raising sweetpotatoes now that you grow from the seed instead of the slip of the plant?

Mr. DEROUEN. Yes, sir. We are doing so now, and my purpose in appearing before the committee is to ask that a small amount of help and financial assistance be given the universities to carry on this good work. We are not asking your committee to buy any land or establish any set-up. The colleges have the set-up but they will need about $80,000 to carry out the work and pass on this valuable information and these methods to the other States.

Mr. LEAVY. I do not think they will ever arrive through scientific investigation at the point where they will be able to produce sweetpotatoes from the seed.

Mr. DEROUEN. Yes, sir; we have done it. It is not a question any more. It has been done.

Mr. LEAVY. But they have not demonstrated it on a basis broad enough yet to say that it is practical?

Mr. DEROUEN. Yes; I think we have. What we are trying to do now is to pass this on to the rest of the 22 States, which are New Jersey, Indiana, Illinois, Iowa, Missouri, Kansas, Delaware, Maryland, Virginia, North Carolina, South Carolina, Georgia, Florida, Kentucky, Tennessee, Alabama, Mississippi, Arkansas, Louisiana, Oklahoma, Texas, and California.

Mr. DIRKSEN. You are asking for an increase of what amount, Mr. DEROUEN?

Mr. DEROUEN. We are not asking for an increase. This is a new item.

Mr. DIRKSEN. It is a new item?

Mr. DEROUEN. Yes, sir. I am asking that you approve this item and include it in the appropriations for the Bureau of Plant Industry under project 4, "Vegetables investigation, Bureau of Plant Industry, Department of Agriculture" (p. 210, 1940 Budget of the United States).

Mr. DIRKSEN. It has never been submitted to the Budget, has it?

Mr. DEROUEN. Yes, sir.

Mr. DIRKSEN. It has?

Mr. DEROUEN. It has been submitted to the Bureau of the Budget. I submitted it myself, and you will have estimates here on it. The figures on losses, from the Department of Agriculture, show that from 1928 to 1932 the losses were $16,517,750 from field disease, storage, black-rot, wilt, and so forth. Now, that deals specifically with only the four diseases mentioned above. In marketing sweetpotatoes, at this time we can only market about 50 percent of our production, because in grading about 50 percent are classed as culls due to the size and shape of the potato itself. The potato is crooked in shape, it is too large or too small, and not being uniform in size cannot qualify under United States grading.

Reverting to the matter of the submission of this item to the Budget, Mr. Chairman, I have here a copy of a letter under date of February 28, 1939, which I addressed to Mr. Daniel W. Bell, Acting Director, Bureau of the Budget. The letter is as follows:

"DEAR MR. BELL: Enclosed herein please find clipped pages from the CONGRESSIONAL RECORD of February 1, 1939, containing my speech on sweetpotatoes and the importance of the continuation and expansion of the research work now being conducted in connection therewith.

"The purpose of my speech and my writing you is to obtain an appropriation for this work so that the present studies and experiments conducted at Louisiana State University may be continued, a better potato produced, and additional cash income put into the pockets of the small farmers of the twenty-odd potato-producing States. I will greatly appreciate your giving this matter your serious consideration and immediate attention with a view of submitting an estimate to the House Committee on Appropriations as to the amount of money that can be profitably expended in furthering the experiments presently being conducted. This is of vital importance to us and I am sure you will appreciate the urgency of the situation and will make your recommendation as soon as possible so that it may be considered by the committee in the hearings on the 1940 Department of Agriculture appropriation.

"This appropriation item should be included in project No. 4, "Vegetable investigation, Bureau of Plant Industry, Department of Agriculture" (p. 210, 1940 Budget of the United States).

"I am of the opinion that $80,000 would be adequate and cover the 21 sweetpotato-producing States, as I understand each State has its own set-up and necessary land for the experiments. I am not seeking any funds to purchase lands, merely sufficient moneys to conduct the experiments themselves.

"In closing, I would again reiterate that these experiments are to be conducted by the Bureau of Plant Industry, Department of Agriculture, at Louisiana State University and the other State

universities of the sweetpotato-producing States, which, I understand, have the necessary lands and set-up required.

"Thanking you for your cooperation, with best wishes and kind regards, I am

"Sincerely yours,

"RENÉ L. DEROUEN, M. C."

Mr. TARVER. Mr. DEROUEN, I am sure the committee is very much interested, and I know I am, but I did not hear your statement on account of the confusion, in regard to the items that you desire increased.

Mr. DEROUEN. It is a new item.

Mr. TARVER. A new item?

Mr. DEROUEN. Yes; a new item, and you have never appropriated any money for that purpose before.

Mr. TARVER. How much do you desire for this item?

Mr. DEROUEN. I am told by the horticulturist at the university that about $80,000 will carry on all of the work, because they have the buildings and equipment, and there is no necessity of purchasing any land.

Mr. TARVER. Under what bureau or what subdivision of the Department of Agriculture would this be carried on?

Mr. DEROUEN. Under the Bureau of Plant Industry.

Mr. TARVER. What subdivision?

Mr. DEROUEN. This is under project 4, included in project No. 4 under the Budget.

Mr. LEAVY. You say they are going to go to the Budget and get an estimate for it?

Mr. DEROUEN. Yes; I have requested Mr. Bell, of the Bureau of the Budget, to furnish the estimate.

Mr. CANNON. It has not yet been received.

Mr. DEROUEN. I understand it has not been sent over yet.

Mr. TERRY. How much have you asked?

Mr. DEROUEN. We have asked for $80,000, and think that we can carry on the work with that amount of money. It is a very small item but it will lead toward further uses of the sweetpotato and its byproducts. I will give you an illustration of what I mean. Now, where I live we can raise 100 bushels of corn to the acre without any fertilizer at all, down there in the Mississippi Valley, but it has so much water that we cannot use the corn at all. Consequently, we do not raise any corn for the market. We could raise alfalfa very profitably, and dispense with all of our sugarcane land, but here again the question of overhumidity enters. When we attempt to take the water out of it, we raise the cost so high that we are not able to compete with alfalfa grown elsewhere. What I am trying to bring to your attention is the contribution that you can make to those farmers in every State by appropriating this small sum of money to further these experiments. To the farmers, potatoes are just potatoes. They are not uniform. There is no attempt made to improve the potato.

Mr. CANNON. Have you tried dehydration in potatoes, corn, and alfalfa?

Mr. DEROUEN. No; not in potatoes. I merely cited corn and alfalfa to show you what we have to contend with. We can build up sweetpotatoes just as we did our sugarcane. After we have standardized them for markets I think we can manufacture a starch which will not harm the other starch, made of corn, and so forth, but it will take the place of sago, tapioca, and all of those starches that we bring into the country from abroad.

Mr. CANNON. What amount of sweetpotato starch is used in the production of mucilage at the present time?

Mr. DEROUEN. Well, I don't know, but I think very little.

Mr. CANNON. It is my understanding that all of the mucilage used by the Bureau of Printing and Engraving is a potato product.

Mr. DEROUEN. They use sago, and they use various kinds of starch, I believe.

Mr. DIRKSEN. Insofar as the adhesives that are used by the Government now for postage stamps and other purposes are concerned, they are made from tapioca starch, which is imported by Baltimore firms from the Dutch West Indies.

Mr. DEROUEN. I think we bought about 240,000 tons in 1937 of those foreign root starches.

Mr. CANNON. What is the difference between these two samples of starch? They are both sweetpotato starches, and they are both from the Laurel starch plant.

Mr. DEROUEN. There is no difference.

Mr. DIRKSEN. One of them rubs off on the fingers a little bit more than the other.

Mr. CANNON. These are all samples of the same starch?

Mr. DEROUEN. Yes; they are all samples of the same starch.

Mr. CANNON. And it is made from sweetpotatoes?

Mr. DEROUEN. Yes, sir.

Mr. LEAVY. It is my recollection that last year we increased the item for investigations at Laurel, Miss.

Mr. DEROUEN. Yes, sir; that is correct.

Mr. LEAVY. They have been carrying on work there that has proven quite valuable to the people in this industry.

Mr. DEROUEN. That is correct.

Mr. DIRKSEN. Since Mr. DeRouen has made an observation on the amount of foreign starch used in this country, last year the Department of Commerce advises me that 466,000,000 pounds of tapioca and sago starch were imported from the West Indies, and virtually all of the starch used for sizing in the cotton mills of this country was imported.

Mr. DEROUEN. That is correct.

Mr. TARVER. The man in charge of this Laurel plant testified the other day that they are producing a product which is a satisfactory substitute for the foreign starches, and that they produced 2,000,000 pounds last year, and they have the capacity for a larger market.

Mr. DIRKSEN. We are bound to have tapioca starch on the free list under the agreements with the Netherlands.

Mr. DEROUEN. We do not produce the potatoes now that we would be producing under this scientific research. The present potato throughout the United States carries about 16 to 18 percent starch on the average. What we would have to do is raise the starch content in the potato to 30 percent without disturbing the food value. We shall also have to carry on further experiments with the byproducts, because that is the most valuable.

Mr. CANNON. That is where the real profit lies, in the byproduct.

Mr. DEROUEN. Yes; we are experimenting with the byproduct. Give us the money to scientifically improve the potato, and we can show you very conclusively that we have developed a sweetpotato that will meet those conditions, and also protect the potato against all diseases. We are not prepared to do it by ourselves, as it is too expensive. In grading your potatoes to No. 1 grade you lose about 50 percent of them on account of the variation in size and lack of uniformity in shape. We are trying to carry on this experiment in such a way that we will not lose the food value of the sweetpotatoes and protect the land from infection. Some of the advantages of this project will be that the farmer can sell at any time a few crates or a few bushels of No. 1 sweetpotatoes out of his crop.

Mr. LEAVY. If you could bring that starch content up to 30 percent, would you then be able to capture the whole American market against the foreign market?

Mr. DEROUEN. That is what we want.

Mr. LEAVY. You think you could do that even though the starches coming in from abroad are on the free list?

Mr. DEROUEN. That is correct, because we would have reduced the cost of it by protecting the land and also improve the quality. We can save $21,000,000 a year in raising the standard of the sweetpotato. Take sugarcane—we brought the sucrose content up from 10 or 12 percent to about 20 or 30 percent.

Mr. LEAVY. You would not need a tariff wall to protect starch?

Mr. DEROUEN. I do not care to bring the tariff in now.

Mr. LEAVY. I know; but Mr. DIRKSEN stated it is on the free list.

Mr. DEROUEN. Yes; it is on the the free list.

Mr. LEAVY. Even though foreign starch is on the free list, it is your contention that if you raise the sweetpotato starch content to 30 percent you can drive the foreign seller off of the market?

Mr. DIRKSEN. You are not going to drive him off the market with the rate at which tapioca can be bought today.

Mr. DEROUEN. Yes; we would have to have some protection, either by reciprocity or tariff, or something like that; but, above all, we must standardize and bring the sweetpotato to a higher standard, as well as protect the land from diseases, insects, and infection, before anything can be done.

I want to specifically call your attention again to the fact that this money is not needed to buy land or equipment.

Mr. CANNON. It is all to be spent in personnel, is it, Mr. DEROUEN?

Mr. DEROUEN. It is all to be spent in personnel and equipment for the experiments.

Mr. CANNON. You will require material and equipment?

Mr. DEROUEN. Yes.

Mr. CANNON. Will some of this be in the nature of capital investment or a recurring item?

Mr. DEROUEN. Well, I do not know. I think most in capital investment and do not believe it will be a recurring item.

Mr. CANNON. Is there any further inquiry?

Mr. DEROUEN. In conclusion, gentlemen, permit me to state that my prime purpose or motive is to secure sufficient money to continue experiments and work which will bring about the standardization of the sweetpotato, the control of soil rot, stem diseases, insects, and other blights, thereby increasing the income of the small farmers of the sweetpotato-producing States and at the same time put into cultivation much idle land which has been withdrawn from cultivation of the five major farm commodities, or crops. The increase of the starch content of the potato for commercial purposes is secondary and does not enter the picture until later when sufficient good potatoes are being produced. Mr. Chairman, if you will permit me to insert this table on the importation of cassava and sago in the years 1933, 1934, 1935, 1936, and 1937, I should appreciate it.

Mr. CANNON. When you revise your remarks, you may include that material in the record.

Mr. DEROUEN. Yes.

The data referred to is as follows:

United States importation of starches

[In thousands of pounds]

Year	Cassava[1]	Sago[1]
1933	190,302	12,317
1934	176,109	12,761
1935	202,112	24,806
1936	269,504	36,434
1937	432,858	33,470

[1] Figures are for tapioca (cassava), crude, flour, and prepared.

[2] Figures are for sago, crude and flour.

Mr. Speaker, at the Louisiana State University we have been doing extensive research work in an attempt to control the many diseases and insects which are peculiar to sweetpotatoes. As you know, the sweetpotato is a tuber and is apt to contract rot from roots and infections in the ground. At this time we have produced by experiment a sweetpotato that will bloom as it has never done in this country—and will produce seed, and this is something new. We believe that by further research along the lines that we have been carrying on at the university we can furnish throughout the United States seed which can be controlled. Sweetpotatoes more or less have a tendency to acquire the diseases that are in the land, and by breeding we can treat it so the diseases will not be transferred to the new area or to the next potato that comes along. We also have in mind controlling the sizes, and we believe that through the experiments we are carrying on in Louisiana we can produce an attractive potato instead of irregular, small, or crooked potatoes.

I believe the sweetpotato industry should be delved into more thoroughly, so we may make use of some of the lands that are lying idle, and, for instance, because we may not be permitted to raise more of one crop or another, we should substitute in one crop what we lose in another.

The sweetpotato is the most important single food and feed crop in the South. It is outranked only by the Irish potato as a vegetable crop for the entire Nation. It has often been said that had it not been for the sweetpotato on many occasions a large portion of the population would have gone hungry. The sweetpotato has also aided greatly in supplying food for armies of the Revolution as well as for later conflicts.

As a food it is a particularly balanced one. It contains practically all of the growth vitamins; it is reasonably high in proteins; and is particularly high in carbohydrates, such as dextrins and sucrose.

The sweetpotato was originally introduced from the more tropical areas of North America—probably from the West Indies—and when brought under conditions of continental North America it rarely, if ever, produced seed, and therefore it has been reproduced asexually from the time it was originally introduced. Any improvements in this crop have resulted from vegetative mutations, therefore systematic improvement has been slow.

Realizing the great importance of the sweetpotato crop, the Louisiana Agricultural Experiment Station has made every effort to improve it in Louisiana, and in the past 2 years methods have been worked out for inducing the sweetpotato to bloom and set seed under Louisiana conditions. The past season we have been able to grow around 1,500 seedlings, and for the coming year we will probably have around 4,000, whereas in reality, under an expanded breeding program, we should have at least 15,000. Due to limited equipment and manpower our program has been hampered materially.

Our purpose in breeding the sweetpotato is threefold:

First. To improve the nutritive value, market quality, and shape. This would include breeding for high sugar and vitamin content and for a very uniform shape. Most of our varieties are very ill-shaped and the growers are able to market only about 50 to 60 percent of the crop.

Second. To breed varieties having a higher starch content than existing varieties. The importance of starch is increasing in Southern States. We are now importing over $9,000,000 worth of cassava starch per year, used primarily in the South in the manufacture of paper and in the textile mills, which could be made from the sweetpotato. Incidentally, this cassava starch is coming in duty-free under the name of cassava flour. To produce higher yields of starch would require varieties bred for that purpose. Good starch varieties should yield from 20 to 30 percent starch. Table varieties usually run around 16 to 18 percent starch.

Third. To breed varieties resistant to diseases, such as the soil, stem, and black rots. These diseases are taking a heavy toll at the present time. The soil rot in particular is threatening the sweetpotato-producing areas of Louisiana, while the stem and black rots are more severe in other important sweetpotato regions of the country.

Systematic and rapid progress with the above three items can only be made through sexual breeding.

To indicate the great interest in the sweetpotato-improvement program, delegates from practically every Southern State and representatives from States as far north as Delaware, Indiana, Iowa, and Kansas have made special trips to the Louisiana Agricultural Experiment Station to study the work under way there. They are anxious to see the work expanded so that they might take greater advantage of the work now under way.

We have here a challenge to American enterprise, and especially to the South, where the sweetpotato could be grown in unlimited quantities and of superior quality. The maximum capacity of the Southern States for sweetpotato production is not known. Sweetpotato growing has been more than a minor farm industry.

Never before has an appropriation been requested for this important crop. It has been estimated by the growers and horticulturists interested in the improvement of the crop that the expenditures necessary to take care of the need for improvement of this crop in the various States would require an annual appropriation of only $80,000.

In closing I wish to urge the Representatives of the various sweetpotato-producing States to join with me in appealing to the Appropriations Committee for the needed $80,000 which is necessary to carry on the investigations and research now under way. This sum should be included as an item in the Department of Agriculture appropriations bill.

I further stated to the committee:

CHLOROTIC STREAK, A VIRUS DISEASE OF SUGARCANE REPORTED IN LOUISIANA

Mr. DEROUEN. I also wish to call your attention to another emergency existing in sugarcane. In May 1928, chlorotic streak, a serious virus disease of sugarcane, was identified and reported in Louisiana by an expert of the Department of Agriculture. Since the Plant Quarantine Act was passed in 1912 no other major disease of cane has entered the United States, with the possible exception of mosaic, which may have been introduced about 1912. The manner in which chloritic streak reached the commercial cane area of the South is not known, but the supposition is that it was brought on cane cuttings by some individual in ignorance of the law. The disease does not exist at the Federal or State experiment stations, which are the only legally constituted agencies for importation of new varieties of cane.

Mosaic, also a virus disease, brought virtual ruin to the industry, the production of sugar falling from several hundred thousand tons per year to a low of 45,000 tons in 1926, after which there was a gradual rise in production, due mainly to the development of resistant varieties by the Department of Agriculture. Mosaic remains a major problem in seven States of the South. Great progress has been made in restoring production, but thus far no completely immune varieties have been produced by breeding, and the disease therefore persists.

One of the main projects of the Department of Agriculture's Division of Sugar Plant Investigation is breeding for immunity to mosaic, which is the only hope for complete elimination of the disease.

Chlorotic streak is apparently a disease of similar nature, but very little is known about it except that poor germination of seed cane and consequent faulty and deficient stands result from planting infected seed cane. This effect of chlorotic streak is a serious complication in the Southern States, because replanting is impossible, due to limited season for making the crop. In Queensland, Hawaii, and Puerto Rico, where the disease has also recently appeared, serious losses may occur, but within time limits the crops may be replanted if serious stand failure results from the original planting of seed cane.

Another disastrous consequence of chlorotic streak, common to all countries, is failure of the ratoon crops; that is, the crops harvested in succeeding years from an original planting of seed cane.

Nothing is known of the manner in which the disease is spread to healthy plantations; the resistance or susceptibility of local commercial cane varieties to the disease; the environmental conditions of soil, nutrition, rainfall, and so forth, that favor or retard spread of the disease; or, in fact, any of the essential information on biology of chlorotic streak that would suggest means of combating or eliminating it.

It is fortunate that up to the present, chlorotic streak is apparently restricted to the area east of the Atchafalaya River in Louisi-

ana. The disease was not found in Mississippi, Alabama, Georgia, or Florida in rapid reconnaissance survey during the latter part of the past season, but the survey, due to lack of special financial provision for it, was not very complete. The tentative assumption is that in some manner unknown the disease was brought into an area centering in the southeastern part of Louisiana and gained a foothold there in the very recent past. From careful observations of the past few months it is proved that under our conditions the disease spreads to new plantings; and that fact, together with the fact that it causes poor germination, faulty stand of plant cane, and more serious injury to ratoon crops, comprises about all that is definitely known.

The situation parallels the accidental importation of mosaic which brought such great havoc and ruination to scores of thousands of farmers who depended upon cane for cash income. In the case of chlorotic streak, an earlier identification of the disease and more prompt realization of the danger makes possible the avoidance of the former disastrous experience.

An immediate study of the disease to establish the cause, manner of spread, relative effect on present commercial varieties, possibility of breeding resistant varieties, or the evolving of other measures to check or eliminate this serious threat to the industry is urgently needed. Alertness to recognize this new threat may justly be attributed to the wise provision of experts by the Congress for study of the cause of mosaic. The specialists trained in that work have made progress but are still preoccupied with a more satisfactory ultimate solution, the development of completely immune varieties, and cannot be diverted from it without sacrifice of essential features of the project.

It is the studied opinion of a committee representing 19,000 sugarcane farmers that provision for immediate, adequate study of chlorotic streak be made to prevent a repetition of the disastrous experience with mosaic and that an emergency appropriation of about $35,000 be made for that purpose. This is an emergency, gentlemen.

Thank you, Mr. Chairman and gentlemen of the committee.

Mr. Speaker, as the Representative of the Seventh Congressional District of Louisiana, I speak not only for my own constituency but for every farmer, processor, manufacturer, and person connected with the sweetpotato and sugar industries of the great State of Louisiana when I express and convey to the Committee on Appropriations and the membership of the House of Representatives of the United States my thanks for the sympathetic manner in which they have listened to our plea. Your generosity in appropriating the necessary funds to carry on the investigations and researches incident to the rehabilitation of the sweetpotato industry and the further promotion of Louisiana's sugar industry through the curb and control of chlorotic streak, a virus disease of Louisiana sugarcane, will long be remembered. This research will accrue to the benefit of every farmer in either industry, and the money spent will redound to the Nation as a whole in the production of better, cheaper, and more wholesome food products for the American consumer.

In conclusion, Mr. Speaker, I wish to again express and convey to the House of Representatives the thanks and gratitude of our Louisiana farmers, as well as our sweetpotato and sugar industries.

Lake Charles, Louisiana's New Short Ship Channel to the Gulf—Our National Defense Program

EXTENSION OF REMARKS

OF

HON. RENÉ L. DEROUEN

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 31, 1940

STATEMENT BY HON. RENÉ L. DEROUEN, OF LOUISIANA BEFORE THE HOUSE APPROPRIATIONS COMMITTEE, MARCH 24, 1939

Mr. DEROUEN. Mr. Speaker, under leave to extend my remarks in the RECORD and include my testimony before the Civil Functions, War Department, Subcommittee of the Appropriations Committee of the House of Representatives of the United States, I call the attention of the Nation to the new short ship channel from Lake Charles, La., to the Gulf of Mexico.

No American citizen can deny that the necessity of preparing an adequate national defense is the paramount task of the hour, and certainly no one can question the wisdom of completing those river and harbor projects which are so essential a part of our defense program, even as are battleships, aircraft, tanks, guns, munitions, and personnel.

The new Lake Charles ship channel is an important link in our chain of harbor and coast defenses, and this new artery of trade and commerce may well become the life line of our battle fleet, for here, in southwest Louisiana, is potentially the greatest oil-producing area in the United States. We have many great fields, both gushers and pumpers, and the oil industry is continually exploiting and developing new areas.

Mr. Speaker, I am addressing myself to the completion of the Calcasieu River and Pass, La., project, the short ship channel from Lake Charles, La., to the Gulf of Mexico.

The present water route from Lake Charles to the Gulf, via the Calcasieu River, Intracoastal Canal, and Sabine River, is 75 miles, and the project now under construction—the Calcasieu River and Pass, La., channel—will shorten the distance to approximately 33 miles, and result in a great saving not only to the shippers, steamship companies, and buyers, but to the public itself. At the present time it requires a whole day to navigate the distance through the channel from the Gulf of Mexico to Lake Charles, and the large steamships arriving at the Sabine Pass after midday are forced to tie up for the night and wait until the following morning, as it is impossible to navigate the existing narrow channel after dark. Such waiting is both inconvenient and expensive.

It was our understanding when this project was initiated that this was to be a 3-year program; and unless sufficient funds are allotted for the continuation of the dredging work this year, the work on the channel and the development of the port of Lake Charles, La., and the area it serves will suffer. The channel should be completed this year and the work on the jetties begun the following year, 1941, as to undertake both phases of the work during 1940 would result in confusion and retard the use of the new channel, thereby depriving southwest Louisiana and Arkansas of the economic benefits which will accrue when this channel is completed and open to the public. The channel, it seems to me, should be completed before the work of repairing and extending the jetties in the Gulf of Mexico is undertaken, as ships could use channel even though the jetties were not complete.

In other words, this channel could be producing revenue, helping the economic condition of the area served for at least a couple of years, and national and international commerce benefited before the jetties are completed. Bear in mind that new jetties are not being constructed; the old ones are merely being repaired and extended. Common sense and business acumen point to the completion of the new channel first and the later improvement of the jetties if this project is to be completed at an early date and opened to commerce and the public.

At this point I wish to insert my statement before the House Appropriations Committee.

[Statement of Hon. RENÉ L. DEROUEN, of Louisiana, before the House Appropriations Committee on the hearings on the War Department civil-functions appropriation, 1940]

LAKE CHARLES DEEP-WATER CHANNEL—STATEMENT OF HON RENÉ L. DEROUEN, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF LOUISIANA

Mr. SNYDER. We have with us this morning Representative DEROUEN, of Louisiana. Mr. DEROUEN, you may proceed in your own way and give us such information as you desire.

Mr. DEROUEN. Mr. Chairman, at this moment, I want to address myself to the river and harbor appropriation recommended by the Bureau of the Budget, and, in that connection, I want to insert in the record this table showing the estimates made by the Chief of Engineers and the amounts allocated by the Bureau of the Budget for flood control and river and harbor improvements.

Mr. SNYDER. It may be inserted at this point.

The table referred to is as follows:

Estimates (76th Cong., 1st sess.)

	The Budget	Chief of Engineers
Flood control:		
General	$110,000,000	$195,525,500
Mississippi River	31,000,000	50,000,000
Sacramento River	2,000,000	1,754,400
Mississippi River, emergency	800,000	1,000,000
Power plant:		
Bonneville Dam	7,000,000	
Fort Peck Dam	2,000,000	
River and harbor:		
Improvement	30,000,000	102,975,800
Maintenance	41,135,000	51,738,210
Total	223,935,000	402,993,910

Mr. DEROUEN. May I say to you, gentlemen, that we of the Rivers and Harbors Committee are amazed at these estimates. I happen to be one of the ranking members of the committee. Mr. MANSFIELD is ill, in a hospital, and is not able to appear. We were amazed at the tremendous cuts made to $30,000,000 for the entire United States, for improvements for rivers and harbors. It is simply impossible, and you might as well have no money for that purpose.

Throughout the entire country, on the Atlantic, Pacific, and the Gulf, there are projects under contract that should go forward.

At this moment may I quote what the President of the United States said yesterday to the National Rivers and Harbors Congress. He said, "I congratulate you on what you have achieved in the past;" and he then went on to recommend the continuation of projects which, by vision and foresight, and after due consideration, have proved to be good and worthy projects.

Certainly we cannot carry on these projects with this amount. If they are carried out, as intended, they would serve to create a condition of reemployment of people all over the country.

I now address myself particularly to those projects on the Gulf coast, such as the Calcasieu River and Pass, La., project; the new ship channel to Lake Charles, La.; and those on the coast between Louisiana and Texas, connecting all of the great ports on the Gulf, including Lake Charles, Houston, Beaumont, Orange, Galveston, etc. These waterways carry today 50,000,000 tons, nearly as large as the tonnage of the Great Lakes, which ranks as No. 1, so far as tonnage is concerned. The Lake Charles or Calcasieu River and Pass project was approved in 1872.

Mr. SNYDER. By the Army engineers?

Mr. DEROUEN. Yes. It was of great importance because of the potential volume of raw material located in this area and valuable for purposes of national defense. In this area you find the great sulfur deposits, in Louisiana and Texas, which are used today in the manufacturing of TNT and many of our other explosives.

Mr. SNYDER. Is that the only place it is found?

Mr. DEROUEN. I mean this is the largest sulfur-producing area in the United States. There is some small production elsewhere, but I am talking about the greater volume of sulfur, as bearing on the necessity for continuing these improvements. This is one reason why we should complete this improvement as expeditiously as possible.

The port of Lake Charles was developed through local interests at an expense of $6,500,000. The report I have here indicates that it was built by local interests and turned over to the United States. This is the report of the Army engineers, approved by the Secretary of War. On page 2 of Document No. 299, Seventy-fifth Congress, covering the Lake Charles deep-water channel, ship channel, and Calcasieu River and Pass, La., you will find this statement:

"The Board of Engineers for Rivers and Harbors, after considering the reports of the district and division engineers and the additional information submitted by local interests at a hearing before the Board, finds that the substantial and growing ocean commerce of the port of Lake Charles is now handicapped by the restricted dimensions of the existing channel and by the heavy and increasing barge traffic therein. The construction of the channel direct to the Gulf as recommended by the reporting officers will afford a new and shorter route for this commerce, with substantial savings in transportation costs; and provide an emergency outlet for the ocean commerce of the entire Sabine-Neches area, which in 1935 exceeded 32,000,000 tons. The prospective benefits of the improvement to the extensive water-borne commerce, especially the petroleum industry of the locality, warrant its prosecution at Federal expense."

Mr. SNYDER. What was the tonnage in 1938?

Mr. DEROUEN. About 50,000,000 tons.

Mr. SNYDER. How does that compare with the tonnage in 1933 or with 1928?

Mr. DEROUEN. There has been a 200-percent increase.

Mr. SNYDER. Since 1928?

Mr. DEROUEN. Yes; it has continually increased, even during the depression. Instead of the volume diminishing, it increased during a period when commerce in other parts of the Nation was at a standstill.

Mr. SNYDER. How do you account for the fact that the volume of traffic increased during the depression years?

Mr. DEROUEN. I can well understand that. This is the only section where sufficient petroleum supplies could be found to carry them over, or to meet the great demands resulting from the development within the last 10 years of automobiles, airplanes, and other petroleum-consuming motors. A condition was created where we did not have sufficient transportation facilities for the traffic involved. Consequently, barges and tankers were pressed into service in handling the agricultural and petroleum products, and as Lake Charles is the natural outlet to the sea of this area, the commerce of the port increased by leaps and bounds.

We were carrying full loads of petroleum products during all of that time. That is about the explanation of it. The East was buying raw materials, while prices were low, and storing them. This accumulation of material, particularly of petroleum, sulphur, naval stores, etc., resulted in increased traffic through the port of Lake Charles and its ship channel as water transportation offered the cheapest and most accommodating method of moving these products. Manufacturing, particularly in the East, has also played an important part in the development of the port. For instance, the Mathieson Alkali Works, of New York, built a plant at Lake Charles, La., costing about $15,000,000, and was busily engaged in the manufacture of caustic soda and many other ingredients that are used in the manufacturing of munitions. In an effort to find ways of protection, they were storing these products in the East, which accounts for barge movements during the depression period, especially in the movement of oyster shells and chemicals. Further, world-wide commerce emanated from the port; cargoes of oil, cotton, rice, grains, naval stores, petroleum, etc., going forward to Central and South America, Europe, Asia, and Australia.

In Document 172, Seventy-second Congress, containing the report of the Chief of Engineers on preliminary examination and survey of Lake Charles deep-water channel, dealing with the question of enlarging the channel, making it 250 feet wide instead of 125 feet, with a depth of 30 feet, the Secretary of War said, in recommending the improvement, the following:

"Based on the comparative freight rates, submitted under the appendix II, and the cargo tonnage handled through the port of Lake Charles during the calendar year 1929, the saving in freight accruing was $1,169,458.40, as compared with the rates through the nearest competing port in the instance of each commodity. This saving does not include 137,030 tons of miscellaneous cargo, principally shells, sand, and gravel for which there is no comparative rate. However, it may safely be said that these materials could not be marketed were it not for the water transportation provided by the deep-water channel."

In Document 299, Seventy-fifth Congress, the recommendation was made that it should be a 3-year program. Now, do not forget that the people have contributed $6,500,000 and an additional $3,000,000 for rights-of-way, or practically $10,000,000, already. This 3-year program contemplates straightening of the channel, shortening the distance through the river and lakes to the Gulf, and the repair, extension, and improvement of the jetties at the mouth of Calcasieu Pass in the Gulf of Mexico.

Mr. SNYDER. How many miles is that?

Mr. DEROUEN. It is 33 miles to the Gulf by the straight channel, and if we followed the present route it would be 75 miles. The engineers conceived the idea of shortening this for two reasons: One was that when a large ship came from the Gulf it could not enter the small channel at night, therefore it would have to remain in the Gulf until daylight before entering the channel, which raised the cost per ton-mile exorbitantly high. Secondly, the contemplated improvement would be a saving of 42 miles in the distance from the port to the Gulf of Mexico. We still have now from this point, indicated by the yellow streak [indicating] over here, 40,000,000 yards of material to be removed at this time. The first amount appropriated was the $1,000,000 last year, whereas the Army engineers had recommended $1,955,000.

Now, there are right here in this area three dredging boats, one of which is the largest dredging boat in the world, dredging material and removing it to a point a mile away. You can imagine what would happen if we do not have sufficient money to carry on this operation. These contractors would have to move away, and that would mean a loss of at least $1,000,000 to the contractors and, in addition, it would throw out of employment all of the men who are working on this channel. Of course, they would be thrown out of employment.

Mr. SNYDER. How many are there?

Mr. DEROUEN. They have about 895 men at work. I am not counting the Government officials who would be paid whether they were working or not, but I am speaking of the laboring class who would be forced on relief, also the thousands who are employed in producing the tonnage shipped through this port. We ask you to provide the $1,500,000 recommended for this year and an additional $1,000,000, making a total of two and one-half millions. I would like to say now that we had a conference with the Chief of Army Engineers, and he said this: "You ought to have more money, but my hands are tied because I have to make allocations within the Budget recommendation."

The district engineer, Col. R. W. Crawford, on March 5, made the statement in New Orleans that this work should be done at once. He said that the project was needed right now.

Mr. KERR. How much would it cost to complete this channel?

Mr. DEROUEN. About $6,000,000, but this figure applies only if completed in 3 years. And here is what Colonel Crawford said:

"NEW ORLEANS, March 4.—Oil to power the battle fleets of the United States in times of national crisis will find another exit into the Gulf of Mexico when the short-cut channel connecting Lake Charles to the Gulf is completed, Col. R. W. Crawford declared here today.

"'At present,' Colonel Crawford, who is United States district engineer for the first New Orleans district, said, 'stoppage of the Sabine Pass would temporarily shut off the movement of fuel coming out of Port Arthur, Beaumont, and Orange, Tex., as well as those from Lake Charles, La.

"'MORE DIFFICULT TO BLOCK

"'Another entry to the Gulf, such as the project which links Lake Charles directly to the Gulf through Calcasieu Pass and gives the Texas ports access there through the Intracoastal Canal, would make it more difficult to block off oil supplies.'

"Citing other advantages for the new straight-line waterway, which is being constructed through a straightened Calcasieu River and out through Calcasieu Pass, Crawford said:

"'In addition, oil that came originally from the Lake Charles district and was intended either for the Atlantic seaboard or a battle fleet, could move to the Gulf with more speed than it can over its present route—by way of the Lake Charles deep-water channel and the Sabine Pass.

"'SEVENTY MILES SAVED

"'On that particular trip, about 70 miles or approximately 10 hours' running time would be saved.

"'Under all conditions,' the colonel continued, 'the new channel will serve as an alternate pass for some 30,000,000 tons of petroleum products shipped annually to the refineries along the Atlantic seaboard.'

"Other advantages which the new channel will offer in times of national emergency, the colonel envisioned as:

"'OUTLET FOR FOOD

"'To provide a relatively speedy outlet for food from the cattle and grain sections around Lake Charles to Atlantic ports or to ships at sea.

"'In event of chemical developments in this region, to provide faster movement of such cargoes destined to points in the Gulf of Mexico.'

"The Lake Charles Channel, according to report, should be completed during 1940 or 1941."

I have here a recent report, just out, by the Corps of Engineers and the Maritime Commission, on the port of Lake Charles. This report is signed by the Chief of Engineers, and it is entitled "Port Series No. 31, 1938," covering the Port of Lake Charles, La. This report indicates the necessity of completing the project at this time.

Within this area are located plants of the Mathieson Chemical Co., of New York, and a number of the big oil companies, including the Gulf Refining Co., the Mellon oil interests of Pennsylvania, the Continental Oil Co., and many others. Here are located their main storage and loading plants. In addition to that, Swift & Co. have acquired 640 acres there, and have one of their largest plants located there. That has been done during the last 2 years, and they are employing about 1,000 men. There is a glass factory planned, which is in course of being built, and there are some alkali works also. Those people, in those industries, are seeking an opportunity to spend hundreds of millions of dollars there, and they will do so if proper port facilities are provided, thus creating new employment, thereby reducing the relief rolls. I have letters from them saying that they will have to abandon their plans unless these facilities are provided. They say, "we are ready to put men to work when these facilities are provided." All of those investments are predicated upon the completion of the work within 3 years, because the Government said to them, "you can go ahead and build your manufacturing plants, and we assure you that the facilities will be completed in 3 years." Now, if we do not complete the work in 3 years, I think those people will move away and seek other places in which to operate, and that would mean a great loss to all those States in the South bordering on the Gulf.

We had at the meeting down there representatives of some of our greatest financial and industrial institutions, including the vice president of the Missouri Pacific, the president of the Louisiana & Arkansas, and executive officers of the Texas & Pacific, Kansas City Southern, and Southern Pacific Railroads, Mr. Dan Moran, president of the Continental Oil Co., of Ponca City, Okla., and many other, representatives of leading financial and industrial institutions, and they all wanted this constructed at once. Now, we have been inviting those people to come there and build factories so as to put more men to work, and then we find ourselves defaulting on the promise, or we find that there is a default on the promise that the Government made to us. That is the situation there.

Mr. STARNES. How much money do you recommend for that project?

Mr. DEROUEN. We should have $1,000,000 more, or $2,500,000. That would keep the construction companies going.

Mr. STARNES. Would that complete the project in its entirety?

Mr. DEROUEN. No; that would only be carrying out the promise of the Government to complete it in 3 years. We of the State of Louisiana did the first job on it. In doing the first job we spent $10,000,000. The Government has said, or the report of the Chief of Engineers, approved by the Secretary of War, has recommended a 3-year program. The Government has promised to complete it within 3 years. Assurance was given to the world that it would be completed in 3 years, but now we are defaulting on that. It is a serious situation. Here is an instance where we could put men to work. The large petroleum companies want to operate in our section; they are seeking material that is produced there, and they have built many large boats and tankers for the transportation of oil, but if they are cut off because of the lack of these facilities, they will operate in other localities.

But for the operations down there you would be paying 38 cents per gallon for gasoline right now. That is what we have been saving to the country as a result of those operations. But for that you would be paying 100 percent more for sulfuric acid than you now pay, and that saving is largely attributable to water carriage or water transportation. This channel will be an integral part of our national defense and as such the project's speedy completion should be further assured by the allocation of sufficient funds to carry on the dredging work planned for the year 1940.

I am glad to have this opportunity of appearing before you, and I do hope you will see fit to grant this increase. When we do this we provide employment for men who would otherwise be out of work. It seems strange to me that in one breath we say, "Let us put men to work," and then in another breath we say, "No; we will not do that—we will not put men to work." I do not see how we can expect industry to put men to work when we say to them, "You cannot invest your capital in a way that will permit you to put men to work." We cannot expect that result when we cut off not less than $75,000,000 for projects under construction and which should be completed. Of course, there are a great many projects that should be completed, and certainly we should continue in employment those who are now on the job.

Mr. SNYDER. We thank you for your statement, Mr. DEROUEN, and you will have the privilege of revising and extending your remarks.

Mr. DEROUEN. Thank you, Mr. Chairman.

Mr. Speaker, Gen. Julian S. Schley, Chief of the United States Army engineers, on the occasion of his recent inspection of the Lake Charles deep water channel project, had this to say:

It is quite clear to me that all of you appreciate how fortunate you are in having your project authorized and money for the work allotted just when it was. We don't know just what is ahead for us in the matter of national defense.

Referring to the comparative ease with which rivers and harbors appropriations passed Congress in pre-war sessions, General Schley continued:

Now, with the tremendous Federal debt and the possibility of international trouble facing us, you would have difficulty in getting anything of the kind.

I want to emphasize the fact that your very active Congressman, Mr. DEROUEN, had much to do in giving matters a push whenever you wanted something done.

In conclusion, Mr. Speaker, I wish to call the attention of the House to the following editorial of the Lake Charles American Press, Saturday, May 25, 1940, to wit:

[From the Lake Charles (La.) American Press of May 25, 1940]

SHIP CHANNEL IS SAFE

The veto by President Roosevelt of a river and harbor appropriation a few days back makes very pointed the comment of Gen. Julian Schley that Lake Charles is fortunate in having its new ship channel already authorized and about completed. With the national debt so large, as he noted, and Congress now so bent on spending all possible funds for defense, projects like our ship channel will be forced to wait a while.

With our ship channel now about completed, we will not only avoid the risk of having it postponed for some time, but will instead have it ready for use in the event of any national emergency. One of the reasons urged for the Lake Charles ship channel was the advisability of having another outlet to the sea for oil tankers. It was pointed out in hearings that if all the oil of the productive Gulf coast in Louisiana and east Texas had to go through the one channel now being used, that possible interference with this channel would seriously cripple the shipment of vital oil supplies. With the two outlets available, we would be far safer. So, our ship channel is now being completed at a period when it may be counted as one of the very valuable contributions made to national defense.

Nevertheless, we all may be certain that it was a fine thing for Louisiana to get the appropriation for the ship channel through when it was, and we will readily believe General Schley that we are fortunate to have it now.

Aircraft Defenses—Warning to New England

EXTENSION OF REMARKS

OF

HON. ERNEST W. GIBSON

OF VERMONT

IN THE SENATE OF THE UNITED STATES

Wednesday, June 5 (legislative day of Tuesday, May 28), 1940

ARTICLE FROM THE ST. ALBANS (VT.) DAILY MESSENGER

Mr. GIBSON. Mr. President, in these days when the people of this country generally are thinking about speeding our national defense, there is great need for emphasis on the strengthening of our air defenses. As a warning to New England, I ask unanimous consent to have printed in the RECORD an article containing excerpts from an address made by Brig. Gen. E. L. Daley, United States Army, more than a year ago at Worcester, Mass.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the St. Albans (Vt.) Daily Messenger of May 9, 1939]

WARNS NEW ENGLAND IT MUST BE READY—GENERAL DALEY URGES BIG EXPENDITURES FOR "SLEEP INSURANCE"

WORCESTER, MASS., May 8.—Asserting "the Atlantic has shrunk to a mere lake," Brig. Gen. Edmund L. Daley, United States Army, called upon New England today to demand $50,000,000 in aircraft defenses as "sleep insurance" in event of war.

General Daley, who will take command next month of the new United States Army department in the Caribbean, recently completed a strategical air defense of New England, which he said would be the first point of attack by a European power.

"I am here to ask you to demand aircraft defenses so you can sleep at night," General Daley told a communion breakfast of Hibernians.

"New England needs strong defensive ports, protected air bases, antiaircraft batteries, and mobile units for protection of industrial centers.

"The crucial element in European diplomacy is not that Germany has more planes but that the German air force can take off for bombing flights knowing perfectly well the country will be protected by strong ground defenses. England and France lack that defense and are feverishly trying to overcome that handicap."

Protect America's Families

EXTENSION OF REMARKS

OF

HON. FRED L. CRAWFORD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 5, 1940

RADIO ADDRESS BY HON. FRED L. CRAWFORD, OF MICHIGAN

Mr. CRAWFORD. Mr. Speaker, under leave granted me to extend my remarks, I include a radio address given by me in New York last Monday night and broadcast through radio station WOR and the Mutual network, as follows:

Thirty million American families are now wondering to what extent the war hurricane sweeping Europe will further descend upon them. Naturally they wonder what, if anything, is being done in Washington to materially cushion the blast.

The press is filled with statements from Washington as to defense plans and programs. One message after another is submitted to Congress. Your representatives, in line with custom, act hastily and approve sweeping proposals.

Will legislation, now being "blitzkrieged" through Congress, provide our families with genuine defense? Will the equities of our people be protected? What is defense, if it fails to preserve for our people that which they have in the way of liberties and possessions?

Recent European history leads me to say that no one can absolutely answer these questions. European people allowed their governments to rush legislation, to enact it quickly, without careful thought, on the claim hurried action would provide adequate defense against invaders; yet, when the invader arrived, the nationals found what they had been led to believe would be adequate amounted to little more than a good cap pistol.

Today in the form of laws we have examples of how legislation, high-pressured through Congress in the past 7 years, has failed to produce the results originally claimed for it.

Let us remember the Banking Act of 1933, the Securities Exchange Act creating that Commission in 1934, the far-reaching Banking Act of 1935, and the Public Utility Holding Company Act of the same year.

The proponents of all these laws claimed their provisions—when administered—would protect the equities of our American families as represented in homes, farms, factories, public utilities, transportation, and communication facilities.

Our first world tornado since the enactment of these laws to protect our people from world economic crises is now blowing. Yet Ralph Hendershot, financial editor of the New York World-Telegram, informs us in a recent article that, despite these laws, our American families have lost about $30,000,000,000 in the market value of their securities, to say nothing of the disappearance of values suffered in the drop in prices of commodities owned by farmers and others.

Thirty billion dollars—just what does this sum represent?

Our ears are now attuned to war costs and to discussions dealing with defense programs.

Thirty billion dollars worth of equities is approximately $4,000,000,000 more than the cost we incurred in prosecuting our portion of the last World War.

It is apparent that if legislation to prevent disastrous economic wash-outs which destroy the equities of our people is possible, then that legislation has not yet been enacted. Every farm owner of beef and hides, of fats, of wheat and cotton, and every security holder who suffered violent market-price breaks in recent weeks clearly understands what I am now saying.

Let us remember the United States still is, we hope, a capitalistic country. By this I mean to say, everyone who owns property in any form is a capitalist to that extent. The families of America work, economize, and save; and they want to reinvest. This process of reinvestment provides jobs for salary and wage earners.

The free and unrestricted flow of capital, of savings, back into industry has provided our families with the highest level of individual possessions of any people on earth.

Every force which directly or indirectly interferes with the voluntary reinvestment of our savings, adds to the unemployment list. It supports those who would overthrow our private enterprise system and substitute instead one of collectivism.

Governments know the surest way to destroy the private enterprise system is to maintain unsound monetary and fiscal policies, permit instability in the buying power of the medium of exchange, and exercise arbitrary power over the issuance of securities to finance industry. They know all of this discourages the individual in making investments in private industry and in functioning capitalistically. This because it drives the investors either to hoarding or buying Government obligations. Such facilitates the substitution of state capitalism for our private enterprise system.

Let us better understand what your Congress—the board of directors of American agriculture and industry—has been doing.

Many people think the acts of Congress, to which I have referred, affect only Wall Street operators and those who buy and sell securities and commodities through the machinery of the exchanges.

But let's not be mistaken about this matter.

We must bear in mind in 1934 Congress created the Securities and Exchange Commission and gave it jurisdiction over several of the laws to which I have referred. Since this Commission began to function, its restrictions have prevented the creation of scores of new units of industry throughout this country. This interferes with obtaining needed funds for new undertakings and the expansion of old ones. It also prevents risk capital acting freely.

This means to say—as the savings of our people accumulated and could not be reinvested—idle bank deposits increased, the production and exchange of goods and services was prevented, and the relief rolls remained crowded with idle workers.

If the net effect of the Commission's administration of the several laws over which it has jurisdiction has been to prevent the reinvestment of the savings of our people and the creation of new industries, and if the failure of the Commission to liberalize its rules and regulations in the face of the present international emergency has contributed to our people losing over $30,000,000,000 within 3 weeks, then I say we should demand a complete investigation of the laws and their administration by the Commission. This would enable us to find out what is the real intent of the Commission.

Furthermore, let us remember that the Commission's jurisdiction covers not only investments held by our 30,000,000 families. Its power reaches far afield. It goes into every corner of the globe where people reside who own securities issued by our American enterprise system.

And this, incidentally, covers our securities held by the nationals of the Low Countries recently overrun by the great force now operating in Europe.

There is such a thing as international loot. How much of the aggressor's loot, if any, has been dumped on the American markets in recent weeks? We should know. By what method and in what volume can those securities and unwanted commodities, which may hereafter be obtained through conquest, be placed on the American market? Let the Securities and Exchange Commission keep the American people informed.

The S. E. C., through its rules and regulations, compels American investors holding our securities to make information, relative to their trading activities, a public matter. But this same Commission, created by your Congress through its rules and regulations, refuses to divulge information relative to dealings in American securities by foreigners.

Leslie Gould, financial editor for the New York Journal and American, declared in his column as early as last January that:

"The S. E. C. goes out of its way to make public the trading done by Americans, but when it comes to operations by foreigners it follows a policy of strict secrecy.

"Why?

"Can it be that the S. E. C. is more interested in protecting foreigners and foreign governments than Americans?

"If not, then why this un-American policy?

"Whenever anyone says anything about this being un-American, the Securities and Exchange Commission Chairman, Jerome Frank, begins to beat his chest and point to his recent book. But Mr. Frank should know it is by actions and not by words that a person really is judged."

Certainly Congress did not intend to pass laws which discriminate against Americans and in favor of foreigners. If it did, then it is time the American people found out about that.

And it should be noted at this point that the work of keeping track of raw-material prices in this national-defense program has been turned over to Mr. Leon Henderson, another member of Mr. Frank's Commission. Will Mr. Henderson follow the un-American policy to which Mr. Gould refers? If Mr. Henderson has been given the power to control the prices of raw materials, has he not actually been given the power to control industry, which cannot function without those raw materials?

In considering this question of foreign ownership of American securities it may be claimed that Treasury Department officials have more or less power to cushion the heavy foreign selling through its powers to "freeze" such holdings. It may even be pointed out that the holdings of the Low Countries were "frozen" on May 10, following the invasion. But the Treasury also "unfroze" them a few days later—and the record shows that heavy security selling began almost immediately thereafter. True, they again "froze" them; but apparently the damage had been done.

The Securities Exchange Act and rulings of the Commission provide certain prohibitions and restrictions covering purchase and sale of securities. This contributes to the development of thin markets in which there may be but few bids to buy stock in a stampede to sell, as was witnessed from May 10 to May 21.

Unquestionably, if officials of units of industry had been permitted, they would have bought their companies' securities in sufficient volume to cushion the abnormal decline. However, under the laws as now administered, they are barred from so doing.

Congress gave the Commission power to relax its rules and to exempt transactions for the protection of investors in the interest of the public. After describing the securities that would be exempted under the act—such as Government obligations and the like—it declared: "* * * and such other securities * * * as the Commission may, by such rules and regulations as it deems necessary or appropriate in the public interest or for the protection of investors, either unconditionally or upon specified terms and conditions or for stated periods exempt from the operation of any one or more provisions of this title which by their terms do not apply to an exempted security." Instead of so doing in this present market collapse, the Commission has adopted a policy of watching the market closely, according to its own official statements.

And how does this help the portion of 30,000,000 American families whose equities were wiped out by the recent declines? Why has the Commission refused to avail itself of the safeguards provided by Congress for the protection of investors and in the public interest?

To further illustrate the effect of these economic storms the security financing for the month of May fell two-thirds below that of April. And May financing amounted to only 50 percent of the monthly average for the first 4 months of the year.

If this same ratio of decreased financing is to govern, it is clearly evident a further substitution of state capitalism will follow hurried action on the part of Congress in giving the President the latest $1,000,000,000 requested.

These rapid-fire demands for vast appropriations by the Congress, and all in the absence of a sound tax approach and complete and definite plans as to how the funds shall be spent may well be questioned.

For Congress to so quickly grant these vast sums and at a time when the markets are demoralized, there is brought into operation an ideal atmospheric condition for wild spending, a greatly increased Federal debt, and political exploitation. Congress can meet again, and after Army and Navy officials have time to present worth-while plans. Is all of this money to be spent before next January 1? Sound procedure would afford checks and balances. Such is the very essence of defense.

The S. E. C. was created largely on the thin excuse of protecting you from losing that small sum you may have to invest in private enterprise. I am convinced, after careful consideration, that this Commission actually—through its interpretation and administration of the several laws—is preventing the free flow of our savings into private enterprise and the use of risk capital which we must have if we are to create new industries. In so doing, the Commission strangles free enterprise and prepares the way for Government ownership or state capitalism.

A free flow of savings into private industry is essential to the financing of the present defense program. Failing in this, the claim will be made that our private system has collapsed and that government must confiscate private wealth in order to raise the required funds. And don't forget—wealth in this case means equities in homes, capital levies on demand deposits, on savings accounts, on cash surrender value of life-insurance contracts, and stocks and bonds.

Consider the powerful position of the S. E. C. Created by Congress to protect your equities, it gives preferential treatment to foreigners; impedes the flow of our savings into private industry and why? Can it be the Commission employs some who are not citizens of the United States, who have been trained in other countries, and who are unfriendly to our free enterprise system?

March 25 I introduced in the House resolution 440 calling for a sweeping investigation of the S. E. C. On May 21 I introduced House Resolution 495 asking for an investigation of the recent stock market crash. Both these resolutions are now bottled up in the House Rules Committee and will remain there unless you—the 30,000,000 families—demand action on them. This is your problem, your fight. I repeat the numbers of the resolutions, House Resolutions 440 and 495.

Continued strikes and lack of plans can quickly involve the President and the Congress in a very nasty situation on this whole defense approach. Whatever our strength is at present is due to our private enterprise system. Just how much "trifling" will Messrs. Stettinius and Knudsen and the public put up with in this crucial hour? To make our productive capacity effective against that of the European aggressors, our system must be permitted to function.

The Congress could well afford to give some of its time, before adjourning, to a more thorough consideration of the national-defense plans and needs. Along with this, it could very profitably look into the matter of just who is selling our American economic system short, and with it all, make a very careful survey of the acts pertaining to banking, money and credit, and the operations of the exchanges under the powers of the Securities and Exchange Commission.

Pernicious Political Activities

EXTENSION OF REMARKS

OF

HON. HATTON W. SUMNERS

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 5, 1940

MINORITY VIEWS ON S. 3046

Mr. SUMNERS of Texas. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following minority views on Senate bill 3046:

MINORITY VIEWS

It is a matter of deep regret that we find ourselves unable to agree with the majority of the Committee on the Judiciary with reference to S. 3046 (to extend to certain officers and employees in the several States and the District of Columbia the provisions of the act entitled "An act to prevent pernicious political activities"). We regret also that we find ourselves in disagreement with other supporters of this bill, many of whom, we are persuaded, have not thought the matter through and are attracted by the title, "An act to prevent pernicious political activities," and are giving their support because they are opposed to pernicious political activity.

There are several very basic questions which are presented by this proposed legislation. The first and most fundamental is, What sort of government do we want to live under in America? There is no doubt but that this bill presents that question. There are only two sorts of government—one of which is termed a democracy in which general classification are included republics or representative governments. That sort of government functions from the people upward. In the people is lodged the strength, the security, and the sovereignty of the Government. In the final analysis they speak the voice of government which is effectuated by their chosen representatives.

It is our view that in such a government, capacity to govern like all other human capacities is retained only by its exercise. In such a government, since the people are the source of power upon which the Government depends, that power can be preserved and increased only by its exercise, and can best be exercised only by having the governmental duties close at hand. The most fundamental, common-sense policy in such a system we hold must be to move governmental responsibilities back toward the people and hold the people inescapably to the necessity of doing in these smaller units of government whatever is within their governmental capacity. No system of government is foolproof and self-perpetuating. Of course, there are things wrong in our elections. There is something

which needs to be done all the time. There must be, or the capacity for self-government dies, and the other sort of government has to take over. Keeping elections clean is important, but the more important thing is the correction of the civic condition which makes this corruption possible. The cure for that civic condition we submit is not for some supergovernment to do that service for them, but for the people to clean up their own elections, and in the performance of that duty they will develop local leaders, develop community accomplishment, develop civic decency, develop strength by the struggle, develop consciousness of responsibility, develop pride of achievement, develop fitness to be free. These opportunities are lost if somebody else goes in and does the job for them. That is the fundamental vice in the bill.

We went into a tail spin after the World War. We went mighty low. The people are struggling out of it now. They are still confused. But they want things wrong made right. The support of this bill is evidence of that fact. But the most deadly thing that could be done to this people, to their opportunity to become fit now, would be for a supergovernmental agency to do for them the things which in their State and community governments they can do and should do for themselves, and thereby rob the people now of the strength, the pride of independence, the virtue of self-reliance, and all the other qualities which make men fit to be free and able to defend their freedom. These are the qualities which the country needs now and must have.

Even now there are signs that the people are anxious to undertake the task of gaining lost ground. It is an interesting fact, however, that the demand for Federal legislation of this sort increases in almost exact proportion to the decrease in the necessity for it. It would be impossible to have strong support for a Federal law of this kind until public opinion and public purpose to clean up politics had developed to the point that it either has been, or soon will be, done in the smaller units of government by the people themselves.

The other sort of government functions from the top downward. The only difference between them, whether that of Russia, of Italy, of Germany, or of a great centralized bureaucracy, is the kind of machinery through which they function. This bill shows them the way and establishes the precedent. First, we drain the States of resources by Federal taxation, thereby making the States dependent upon the Federal Treasury for the money upon which to operate. Then, following the plans and precedents of this bill, Washington can attach any condition it pleases to this money it sends back to the States, and the job will be completed. There is a difference in the details of procedure through which these types of government functioning from the top downward operate and perpetuate themselves, but not in essence.

If we may say so without offense, and we certainly do not mean to be offensive, it is our judgment, after a careful examination of this bill and its far-reaching effect upon the governmental structure of our States and their security, and upon the governmental capacity of their peoples, that it proposes a deeper thrust into the vitals of our democratic institutions in favor of bureaucracy than any of which we have known in the history of this Government. In the first place, it proposes a Federal activity denied by the Constitution to the Federal Government. It opens up a route around established constitutional barriers protecting the people against bureaucratic control in order to attack from the rear the reserved rights of governmental responsibilities of the States and of their smaller communities. We respectfully insist that these are not things of sentimental or academic importance merely, but they are as important as the hope and opportunity of this people to remain free.

The distinctive characteristics of this bill, as provided in section 12 (a) is the proposed extension of the Federal power over State, county, city, village, and precinct elections, including primary elections, and over the opportunity for employment of private citizens of the States and over the States themselves. Of course, there is no constitutional warrant to do this. There being no constitutional power, and no warrant in the philosophy or experience of free representative government, it is proposed by this bill to proceed indirectly through an extra-constitutional power acquired by getting more money from the people of the States than is expended for Federal purposes and sending a part of that money back to the States and their communities with the Federal power attached to control the States, their subdivisions, and citizens.

We realize that the obligation to support and defend the Constitution sits lightly upon the shoulders of many these days, but it might be mentioned, at least in passing, that this proposed legislation is without constitutional authority. By its intended and actual coercive effect, it impinges upon the sovereignty and governmental responsibility of the States and of their communities and upon the liberty of speech, action, and opportunity for employment of the private citizens of the States, in matters clearly within the exclusive governmental responsibility and capacity of the States, and that, too, with reference to one of the most basic of their governmental responsibilities—the election of their public officials.

This procedure, compelling the States to submit to a Federal control not authorized by the Constitution, by not letting them get back enough of the money, which their citizens had been compelled to pay into the Federal Treasury, to discharge their governmental duties, presents an important, fundamental question for the consideration of Members of Congress now. Shall we by the enactment of this legislation give our approval to doing and establish the precedent of doing in a circuitous way that which it is denied to us to do, both by the letter and spirit of the Constitution? In other words, are we willing to adopt the policy of blackmailing the States and their subdivisions into the surrender of their reserved powers? This bill shows the way. Just as the Supreme Court has the power to render any decision it wills to render, just as two-thirds majority of the House could expel all its opposition, we have this power by the control of this money to do this thing. The framers of the Constitution could not protect against the violation of the Constitution by certain officials of the Government from whose determination there is no appeal, except to the people.

It is provided by section 12 (b) that the deduction or fine to be levied against the States or their subdivisions specified, for each employee whom the agent of the Federal Government demands shall be discharged, and whom the State or subdivision does not discharge, is to be the amount of 2 years' salary of such person.

It is further provided by this bill that such person whom this agent demands shall be discharged may not be reemployed for 18 months by such State or subdivision in any capacity, even though the new employment may be on a project or in a capacity in which there is not one dollar contributed by the Federal Government.

This bill is far more important in its potential than in its immediate results. It is the most striking example which we have yet had of the Federal power following the Federal dollar. Congress by this bill endorses the policy and sets the precedent.

In opening the way for our rapidly developing bureaucracy to get around our constitutional barriers, in setting the precedent and in approving the policy, this bill is a rear attack upon the most intimate, vital, and necessary reserved powers of the States. We do a thing, the far-reaching consequences of which nobody can foresee.

If by this method we are to compel the States to surrender their exclusive control over their State and community elections, why may we not compel the States to a surrender of educational policy and of the schools themselves? It can be done. Why not everything? The Federal Government may tap the sources of State revenue, bring the money up here, and compel the States to do whatever Washington wants them to do under the policy of this bill in order to get their share of the money necessary to carry forward the States' own work.

This bill in section 12 (b) further provides that if an employee who has been discharged in one State succeeds in getting employment in any capacity in another State or local agency which receives loans or grants from a Federal agency, this Federal power pursues him whether he be policeman, street sweeper, or what not. This is the provision:

"Such order shall require the withholding of such amount (2 years' salary) from such other State or local agency" employing this man.

One of the prohibitions carried in this bill (sec. 12 (a)) is that "no such officer or employee shall take any active part * * * in political campaigns."

That language is followed by this language:

"All such persons shall retain the right to vote as they may choose."

This is not some foreign dictator saying this to his people. That language is contained in this bill, which Members of Congress are in process of saying to the people who send them here.

Members of Congress and the people of the States should be advised that there is nothing in this bill that secures their people from being coerced by the Federal power which this bill establishes.

Is it not to be supposed, looking a little way down the road we are traveling, that a bureaucratic organization, seeking to perpetuate itself in power, might not "bump" these citizens off the pay roll who do not vote "right," from the standpoint of these people seeking to perpetuate themselves in power?

There is no question that they are being given the power under the provisions of this bill to do exactly that thing. We are dealing now solely with governmental power. Human nature and its disposition to use an arbitrary power does not change during the journey to Washington.

This bill does not eliminate the power of political coercion of voters but shifts it from those whom the people can control through local elections and prosecutions in their local courts to an appointed personnel operating from Washington whom the people of the communities can have no possibility of controlling.

As long as this responsibility and power is located in the communities of the States the people of the several communities at least have the governmental power and responsibility to protect themselves and their elections. They elect their chief enforcement officers. But when that power is brought to Washington, the individuals in the several communities have no possibility of protecting themselves against its arbitrary exercise. The fact that these new custodians of this power would not have to answer to the people of the communities where the power would be exercised ought to appeal to the caution and sound judgment of the Congress and the country.

Section 16 of the bill contains this language:

"Whenever the United States Civil Service Commission determines that, by reason of special or unusual circumstances which exist in any municipality or other political subdivision, in the immediate vicinity of the National Capital in the States of Maryland and Virginia or in municipalities the majority of whose voters are employed by the Government of the United States, it is in the domestic interest of persons to whom the provisions of this act are applicable, and who reside in such municipality or political subdivisions, to permit such persons to take an active part in political

management or in political campaigns involving such municipality or political subdivision, the Commission is authorized to promulgate regulations permitting such persons to take an active part in such political management and political campaigns, * * *."

How much? We quote from the bill:

"To the extent the Commissioner deems to be in the domestic interest of such persons."

These provisions are not limited to Federal employees. They apply to every citizen who lives in these communities and has employment on jobs where these communities have got back for those jobs any part of the money which they have paid into the Federal Treasury either in taxes or in payment for bonds which they or their children or grandchildren or great-grandchildren must either pay, carry indefinitely, or repudiate.

These citizens of these communities are "permitted" by the terms of this bill to do with reference to the selection of the public officers for their communities not what their respective States permit, but what the Federal Civil Service Commission "deems to be in the domestic interest of such persons." The States themselves may be punished. This language, and it is in general harmony with the bill, we may have to remind ourselves, is not from some edict from the ruler of Russia or of Germany but is in a bill, this bill, seriously proposed and now more than half enacted by the American Congress.

There are other provisions of this bill which fall within the general governmental scope of the Corrupt Practices Act and of the Hatch bill passed last year, but it is the proposed extension of Federal power over the citizens of the States and over the elections in the States, both general and primary elections, and over the States themselves through the power to deduct Federal money where the demand of Federal agents is not complied with, which is the central, dominating characteristic and the controlling inspiration for this proposed legislation. This statement cannot be questioned.

This bill brings into clear vision not only the direction in which we are moving with reference to these two sorts of government, but also the distance which we have traveled. It also gives us a clear example of how the Federal power may be made to follow the Federal dollar.

Every student of our Government today must agree that, regardless of what may be the present attitude, only a few years ago it would have been inconceivable that the representatives of the people sent up from the several States would entertain a legislative proposition such as this bill, that can have no possible justification except upon the assumption that the people of the States have so degenerated in character and in governmental capacity that they can no longer be entrusted with the discharge of a governmental responsibility so vital to them and so completely within the governmental power of their community as their State and community elections. Just a few years ago it would have been inconceivable that chosen agents of the people of the States would ever actually favor a policy of compelling their States and their communities, in order to get back a part of the money which had been got from them, to submit to the character of degradation and governmental vassalage proposed to be imposed upon them by this bill. This bill is intended to compel an actual surrender of essential elements of sovereignty and self-respect and a surrender of their own employees to the character of bureaucratic power authorized by this bill to be exercised over them. But the worst thing is the removal from the people of the inescapable necessity to do the job of self-governing. It is perfectly ridiculous to remove that necessity and expect the power to remain. It is perfectly ridiculous for us to hope to escape some form of totalitarian government when the people shall have lost the power to govern themselves. It is our conviction that this Government is in far more danger from the inside jobs that are being done than from outside subversive activities, dangerous as they may be.

Section 12 (c) of the bill provides the right to resort to the Federal courts. Those who probably could afford to resort to these courts, however, are exempt from the provisions of the bill that—

"No such officer or employee shall take any active part in political management or in political campaigns."

Those thus exempted by the bill are the "Governor, or the Lieutenant Governor of any State, or any person who is authorized by law to act as Governor, or the mayor of any city; duly elected heads of executive departments of any State or municipality (except civil-service employees); officers holding elective offices."

The little fellow without influence or money to fight his case may be ousted for the very things which these officials are specifically permitted to do. He has the right of resort to the Federal court, but in the meantime without any salary. This appointed Federal employee, under the provisions of this bill, by the coercion which this bill authorizes to be exercised over the States, may stop the salary of this State employee working on a State job. The bill provides in subsection (c) of section 12:

"Such officer or employee is suspended from his office or employment during the pendency of such proceedings [court proceedings]."

He may go even to the Supreme Court of the United States, which, as a practical matter, for the average State employee below the grade exempted by the language of the bill referred to, is about the same as telling him there is somebody in the moon who might protect him against the arbitrary power to which his Congressman had subjected him if he would go there and tell him about it.

There is now an encouraging and widespread revolution against political corruption. There are two courses we may pursue—enact a law like this bill and let the pressure of this revolution blow itself out in the enactment of a Federal law and let the people go home and go to sleep again, or to refuse to do that by defeating this bill and letting the pressure of that revolution force its way back into the States and their communities, where it will find expression in community action, and result in the promotion of the civic decency and fitness of the people to govern, in an increase of their will to govern, a belief in their right to govern, and in an increase in their confidence in their ability to govern, and in the strengthening of their determination to govern. That is what this country needs and must have if it is to survive.

We believe in the ability of the American people, even in this complex age, to maintain an efficient system of free government, but only if we preserve and increase that ability by holding in the smaller units of government which the people can control, those governmental duties which are within the governmental capacities of these units to discharge.

We do not have the slightest question as to the high purpose actuating the support of this bill. We are persuaded, however, that the anxiety to remedy conditions in certain sections has prevented an examination of the deep, far-reaching, and disastrous consequences which would result from the approval of this bill, and particularly from the precedent it would establish and the governmental policy which the Congress would thereby inaugurate and sanction of using Federal money got from the States to compel the States to surrender their independence and governmental responsibility and submit themselves and their people to the domination of a supergovernment operating from Washington.

Where Do We Go From Here?

EXTENSION OF REMARKS
OF
HON. ANDREW C. SCHIFFLER
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 5, 1940

ADDRESS BY HON. FRED BRADLEY, OF MICHIGAN

Mr. SCHIFFLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by the gentleman from Michigan, Hon. FRED BRADLEY, at Bluefield, W. Va., on May 31:

I feel highly honored in being invited to address you. I realize and I wholeheartedly accept the responsibility placed upon me because of my friendship for, and your confidence in, my very able—my very distinguished colleague and my very good friend, the Honorable "ANDY" SCHIFFLER. In him you have a true patriot, a loyal American and a most distinguished and industrious Representative of the State of West Virginia. West Virginia should indeed feel highly honored by the representation afforded it by the Honorable ANDREW C. SCHIFFLER.

These are indeed difficult times for any one in public life to adequately express himself and avoid misinterpretation. As a matter of fact, I had rather adopted this slogan, "We in Washington hear so much, it behooves us to say so little."

Our New Deal brethren in Washington now continually prate about unity. Of course, we are a united people, patriotically dedicated to the preservation of these United States. But at this moment in Washington, the majority's idea of unity is complete capitulation of the minority. For one to dare to question—much less criticize—the will of the New Deal majority is to be branded as disloyal and unpatriotic—while to differ with the slightest whim of the President is practically treason.

Well, you and I, I know, feel differently about this question of unity. In 1918 we fought in Europe to make this world safe for democracy—we fought the war to end all wars. We know the second objective was a tragic failure. Let us not permit the first to become a complete wash-out. This is the last big democracy intact today. Let us not be guilty of creating a Hitleresque dictatorship here. Let us not confess a total abolition of democratic virile two-party government here is necessary to successfully cope with the madcap Hitler of Europe today. It is the solemn duty of the Members of the minority in our free land to keep a checkrein on the majority at all times. Therefore let no man question the loyalty nor patriotism of any duly elected minority Member of our Congress when, in these days of national concern, he frankly and from his very heart speaks forth the facts he has learned from

reams of evidence made available to him in committees, on the floor of the House, or in innumerable other ways while he is conscientiously striving to discharge his constitutional oath of office.

Oh, my friends, you recall these words of the sage:

"God, give us men! A time like this demands
Strong minds, great hearts, true faith, and ready hands;
Men whom the lust of office does not kill;
Men whom the spoils of office cannot buy;
Men who possess opinions and a will;
Men who have honor; men who will not lie;
Men who can stand before a demagog
And damn his treacherous flatteries without winking!
Tall men, sun-crowned, who live above the fog
In public duty and in private thinking.
For while the rabble, with their thumb-worn creeds,
Their large professions, and their little deeds,
Mingle in selfish strife, lo! Freedom weeps,
Wrong rules the land, and waiting Justice sleeps."

So, Mr. Chairman, we here are Republicans and we're proud of it. Last Wednesday afternoon, on May 22, I heard the Majority Leader of the House make this statement, and I quote:

"* * * and in the months to come, they're going to find out (meaning we Republicans) that that glimmer of hope which they had after the election in 1938 when they had such an overwhelming victory that they left a majority of only 92 Democrats in the House—that small glimmer of hope which they had then is not flaming quite so brightly as it was a few months ago, and it will continue to flicker and flicker, and perhaps instead of carrying 46 States of the Union in November 1940 it will have then flickered out, and the vote for the Democrats will be unanimous." (And I ought to add this from the CONGRESSIONAL RECORD—"applause"— on the Democratic side.)

Now what is the matter with the Republican Party?

Are we going to take a statement like that lying down? Are we going to adopt a defeatist attitude? Are we going to accept, lying down, a one-party government in this country—and there is no question but that this administration and this New Deal Party expect it—are we going to take that lying down, or are you and I as true Americans going to fight our way out? It's up to you. It's up to me.

So, Mr. Chairman, I have chosen as the title of my speech tonight, Where Do We Go From Here?

In this group here I know I do not have to tell you where we are. I do not have to remind you or any other loyal Americans of the shortcomings of this administration. I do not have to remind you of the proven gross inadequacies of this administration to cope with the domestic problem. And if it can't cope with our domestic problems, how can it cope with international problems? I do not have to remind you, for example, that at the end of the preceding 144½ years before the Roosevelt administration our total public debt was approximately twenty-two and one-half billion dollars, while at this moment the national debt is almost $45,000,000,000, if not over that, thereby an increase of approximately $23,000,000,000 over 8 years. In other words, a greater indebtedness has been accumulated in 8 years than all the preceding Presidents were able to pile up in the preceding 144 years. I don't have to remind you of that. You are all aware of it. I do not have to recall to your mind the gross miscarriages of justice in the administration of the W. P. A., the farm program, the C. C. C., the social security, and other maladministered, though highly idealized and publicized, beneficent measures of the holier-than-thou New Deal.

I do not have to remind you that last week—under White House pressure—on the relief bill, if you please, we appropriated a half million dollars for the Office of Government Reports. We call it the "Ogre," and we had previously turned it down twice this year on other bills. That's a honey, that one. A glorified clipping service so the tomcats of the New Deal can learn how they sounded on the backyard fence the night before.

Now, Mr. Chairman, I hesitate, I do not want to dwell on the unfortunate, the tragic developments in Europe in a world gone mad. I need not repeat them here now. We are all aware of them; not a man or woman in this room but what is sincerely concerned with them and in anguish over them. And in going into this subject also, may I say that I full well appreciate that in many parts of this Nation, perhaps in this district right here, due to administration propaganda, I may be touching on a very difficult subject. I may be sticking my head in the noose when I arise not in opposition but, at least, in a spirit of questioning the President of the United States.

Mr. Chairman, it is, indeed, fortunate that the Orson Welles' broadcast of the story of the war of the worlds preceded the recent message of the President as it was so dramatically presented to the assembled Houses of the Congress of the United States, and, incidentally, to the people of the United States and the world on Thursday, May 16. And may I say that, even in the city of Washington, it was not only presented to us so dramatically by a personal appearance of the President but it was, indeed, recorded and rebroadcast, not once but three different times, during that same evening in the city of Washington itself. Now, surely, no living, sane individual in this country can tell me that we are in so imminent danger of invasion that that was necessary. As a matter of fact, only last Sunday, in his "fireside chatter" he tried to pull the "fire" out of his dramatic message to the Congress and to reassure the people that everything is going to be all right. So, by his own words, his message to the Congress largely stands repudiated. It was publicity—it was political publicity—a political publicity stunt from start to finish. I say that and I demand or challenge a denial. It was personally and dramatically staged by the President not to arouse the Congress of the United States, not to call our attention to our state of unpreparedness, not to call our attention to the alarming state of affairs in Europe, not to call our attention to the demagogic stated need for unity in this Nation, but it was staged purely and simply for one purpose—to alarm and arouse the American people. It was the first political speech aimed at a third-term nomination.

Oh, I say to you it was well that Orson Welles months ago broadcast his war of the worlds, broadcast his imaginary parachute invasion of every city, village, and hamlet of the United States—yes, of St. Louis, Mo., and of Bluefield, W. Va.

Mr. Chairman, in the words of my good friend, the Honorable DAN REED, of New York, "I shall support an adequate defense program, but I reserve the right as a Representative in Congress to use every legitimate effort to prevent this administration from leading this Nation into the war now raging abroad. The people of this Nation have had one experience of keeping out of war until after election, and unless I miss my guess, they will not repeat the experiment of the political duplicity of 1916."

Now let us examine the President's speech of May 16 to the effect that the Congress and the President are a team as far as national defense is concerned. That, therefore, after we adjourn he would not hesitate to call us back into special session if some unusual defense requirement demanded it.

Now listen, you folks, how can you drive a team of horses when the horses are out in the field and the driver back in the barn? As far as I am concerned, it is far less important to me that I get back into my district and campaign—that I run away from my duties in Washington—than it is that I stay on the job where I belong, in Washington, during this crisis, and that the Congress remain in session and that as the President requests, we act as a team with him in this present international crisis. But do you think we'll do it? Not a bit of it. The latest dope I had when I left Washington this morning was to the effect that Congress would adjourn and be sent home with the blessings of this administration.

Congress should remain in session, the American people demand it, and I shall vote against adjournment of this session.

Just exactly what is the situation with respect to foreign purchase? This war has been going on since last September. As a matter of fact, we had Allied purchasing missions in this country before that. To date they have taken delivery on less than 800 American planes. In effect they demanded we give them the latest and best of the types we had available, not only in production or in existence, but those that we had on the drafting table as well, while balking at paying any part of the development costs.

Now I appreciate the benefit of letting someone have the latest type airplanes we can produce in order to ably cope with those last produced by the dictators. I appreciate the logic in the suggestion, albeit a rather satanical suggestion, that we must of necessity let the battle-strewn clouds of Europe be a testing ground for our fighting craft. And that based on those experiences, and based on those sales, we shall be able to build up our aircraft manufacturing industry to a point where we shall ever be able to produce the most efficient, the most effective aircraft in the greatest quantities ever known to mankind. But an aircraft on paper cannot fight. It must be on the airport ready to take the air, manned by a capable crew, equipped with the best of self-protective devices, and full of the best of fuel in order to cope with any adversary. Therefore, I sincerely feel in the interests of self-preservation, the first law of nature, that we should adopt this policy. First we must decide upon what we are going to defend; namely, the continental United States, or secondly, the continental United States and its possessions, or thirdly, the continental United States, its possessions, and South America, Canada, Greenland, and the rest of this hemisphere which comes under the Monroe Doctrine. That should determine the numbers and types of aircraft necessary to meet any and all challenges from abroad, and, having determined upon the classifications and quantities required, then I say to you, our first duty should be to order and procure in fighting condition those aircraft of the latest design of which we are capable, and having done that, let us deliver them to foreign nations off this end of the line only as many of those aircraft as we can furnish of the latest and most efficient design as we can add onto this other end of the line. In other words, I want to see the armed forces of this Nation, the aerial arm of the defenses of this Nation, kept as near to the maximum of efficiency as we are capable of maintaining it, and then—and only then—should we release our aircraft abroad.

Now, I know there are those in this Nation, there are probably those in this audience who feel that that is entirely too selfish. Who feel that perhaps the President was right when he said our frontiers are in France. There are those who perhaps entirely misguided—and I say that conscientiously because it is not founded on fact—believe that should the dictator nations conquer the Allies, we will come next. To them, I say that the only way in which I personally am willing to concede a point in this aerial argument is this. Based on the fact that we still have 3,000 miles of ocean on the Atlantic side and 5,000 on the west, based upon that fact, I might be willing for the moment to go 50-50, in other words, I might be willing to send one of our

latest and most modern ships abroad for each duplicate ship that is turned over to the armed forces of this Nation and in the interest of our own safety. No further than that would I go.

Now, Mr. Chairman, I want to go into another phase of the President's speech. He stated:

"This means military implements—not on paper—which are ready and available to meet any lightning offensive against our American interests. It means also that facilities for production must be ready to turn out munitions and equipment at top speed."

Now that is a perfectly logical position. No man in his right mind can be critical of that, but I want to ask you this. What has the President done with the money we have appropriated for national defense during the past 8 years?

From 1925 to 1932 our annual average for Army and Navy defense and maintenance was $634,351,098. During the New Deal from 1933 to 1940 the average was $1,027,424,154, which includes the allotments of emergency funds separately allocated to defense. Now what have we gotten out of it? I'm asking you. As a Member of Congress, I can't find out definitely. The Army Air Corps, for example, will not tell me as a Member of Congress how many airplanes it actually has in modern fighting condition right at this moment. And the President himself, in his fireside chatter of last Sunday evening, utterly failed to take the American people into his confidence and disclose the true condition of our defense. There is a grave difference between "on hand and on order."

Last week Gen. George C. Marshall, Chief of Staff, testified that a force of 70,000 now maneuvering in Louisiana and Texas, and the Third Division on the west coast, has no reserves of material or men. And I quote him.

"In other words," he said, "if they were bombed actually instead of theoretically today, there is no duplicate truck to take the place of the one destroyed.

"If our pilots who are operating in those maneuvers today were shot down, we have not the replacements in actual pilots to take their places. We have replacements of planes, or rather we will have them, when production comes to current orders."

General Marshall also stated to the Military Affairs Committee that as the situation now stands, the Army's lack of guns and fighting equipment makes it impossible for the United States to capitalize on its greatest national asset—man power—because without adequate material a soldier is in a hopeless, tragic situation on the battlefield. General Arnold, the Chief of the Army Air Corps, stated that our present best bomber, the twin-engined D-18, if "sent out against modern equipment would be suicide."

Maj. Gen. C. M. Wesson, Chief of Ordnance, told the committee that the Army was so short of ammunition that the situation was so serious that "it ought to be emblazoned on the Flatiron Building so that the public would know."

O Mr. President, what have you done with these billions we have given you? If you couldn't prepare our Army in peacetime, how can we trust you to prepare it in times of international crisis?

And, then, 10 days ago the President summoned to Washington the leading aircraft manufacturers of the country. They were to lay plans, as he stated, for the production of 50,000 planes annually. What happened to that? The leaders in the aircraft industry of the United States were in Washington for only 1 day, on May 20. They left the city in disgust, after attending a meeting designed to throw the aircraft industry into high gear.

After listening to the Army chief confess that this whole thing was thrown at them so fast they did not have a chance to prepare, some of those key industrialists left, charging, "It's all an administration publicity stunt; they do not even have a plan."

Mr. President, in this question of preparedness you have been as woefully inefficient, as woefully extravagant, as woefully incapable as you have been in many other of your New Deal experiments of the past 8 years. And in November of this year, Mr. President, the American public—the thinking public—is going to prove to you that neither you, nor Hitler, nor Mussolini, nor any other dictator armed with all the dictatorial powers which you have built up around you, armed with the dictatorial powers that are now prevalent in Gerat Britain and France, are going to prevail in this free America. America needs no dictatorial powers to wage a war of defense. America needs no regimentation, and will accept none, except the regimentation of patriotism which it has always had, and which, praise God, it will always retain to defend its shores and its ideals and traditions against any foreign invader.

Now, Mr. Chairman, I have been dwelling at length—too long, I fear—upon this subject of what we call national defense, and by that I mean our armed defenses. Now I want to dwell upon what I consider a far greater menace to our security than the threat of a foreign invader landing on our shores. I refer, of course, to the menace of the "fifth column," to the menace of the Trojan horse.

O Mr. Chairman, I appreciate every man and woman in this room, myself included; all of us were either immigrants at one time, or our ancestors were when they came to this country. For one, I shall always welcome to these shores those oppressed peoples of foreign nations, but I do insist that when they come to this country of ours, seeking the freedom which we alone can give them, that they come here openly, unembarrassed and unashamed, craving that freedom, but agreeing among all things, as a guest in my own home would do, that they live as we ask them to live—under our laws and under our ideals and traditions of government. When those do not suffice, after a trial, then I say that they are no longer welcome, any more than an unwelcome guest would be in my own home. When they do not want to live as we, their hosts, want them to live, then I say to them, "Get back where you came from because America does not want you"; and the sooner we wake up to that menace, the sooner we drive those undesirables out of this country, the better off and the more secure we'll be.

Within the past week the President has finally publicly recognized this menace. He proposed, a week ago, Reorganization Plan No. V, to take the Bureau of Immigration out of the Labor Department and transfer it to the Department of Justice, which we, in the House unanimously approved last Monday—this, after our good friend "Ma" Perkins had been shielding Harry Bridges and every other known type of criminal alien in this country for years.

You all know what a remarkable record has been achieved by the G-men—by the Federal Bureau of Investigation. They have working agreements with practically every nation on earth and for many years, through interchange of fingerprints of aliens taken upon arrival in this country, they were able to stop international crooks, dope peddlers, prostitutes, spies, and other criminals at our shores.

I regret that I haven't the time this evening to even begin to tell you all I know about the existence of the Trojan horse and the "fifth column" in this Nation. There are in Bluefield, I appreciate, a great many among you who, perhaps, are members of the United Mine Workers of America and the C. I. O. I hope that every one of you in this room who has the opportunity will carefully read the speech delivered by MARTIN DIES in the House on Friday, May 17; and if I may say so—with becoming modesty—I hope you will all find an opportunity to read the speech which I made in the House on May 13, both dealing with this subject about which the President has since become concerned.

Now, let me make one point clear before I start in on this subject. I know of no organization, no body of men, in this country for whom I have a more sincere or more profound respect for their loyalty and patriotism than I do for the United Mine Workers, for the rank and file of the men in that union and in the C. I. O. But I say to you right now that if there are in your midst disloyal, un-American leaders or members, I hope and pray to God you'll have the courage to drive them out of your ranks and expose them to the public for what they are before the public loses the faith in you that I hold for you.

Now please do not misunderstand me and imagine for one moment that I am saying these "termites" are to be found only in the ranks of labor. They are to be found everywhere and anywhere, in all walks of life. We have but to look to the teachings and the utterances of these dictators to determine the classes of people whom they have imbued with their spirit, the classes of people whom they have selected to bore from within, making dupes, if you please, of honest but misguided and misinformed people in this country. Here is what Lenin himself advocates as the nucleus for the Communist Party in this country—and I quote him: "A small kernel consisting of reliable, experienced, and steeled workers with responsible agents in the chief districts and connected by all the rules of strict conspiracy." Again he says—and I quote: "Revolutionaries who are unable to combine illegal forms of struggle with every form of legal struggle are very poor revolutionaries."

Are they here? Earl Browder, the present head of the Communist Party in the United States, has himself estimated that there are nearly 2,000,000 Americans who go with the Communist Party all the way to its full program. In an official pamphlet of the Communist Party of the United States, Leon Platt has this to say: "American workers, when called upon to go to this war against the Soviet Union, must refuse to fight the Russian workers and go over on the side of the red army. The American workers, like the Russian workers in 1917, must turn an imperialistic war into a civil war against their real enemies, the capitalist class of the United States, which exploits and oppresses the American working class." Earl Browder, before the Dies committee, testified that he would try to precipitate this country into a civil war in the event of a conflict between the United States and the Soviet Union. Thus, my friends, do we learn something about the aims, the villainous aims, of the conspiracy of the Communist Party financed by and acting under direct orders from the Communist headquarters in Moscow. And yet, when the American Youth Congress was in Washington some months ago, the President of the United States himself told those misguided youths that it was perfectly legal and proper for them if they so desire to become members of the Communist Party in the United States.

Now let us look at the Nazis. How does Herr Hitler operate? How did he bring about the sudden collapse of Austria, Czechoslovakia, Poland, Denmark, Norway, and Holland? Listen to his words, and I quote him:

"When I wage war, troops will suddenly appear. * * * They will march through the streets in broad daylight. * * * No one will stop them. Everything has been thought out to the last detail. They will march to the headquarters of the general staff. * * * The confusion will be beyond belief. But I shall long have had relations with the men who will form a new government—a government to suit me. We will find such men; we shall find them in every country; we shall not need to bribe them. They will come of their own accord.

"Ambition and delusion, party squabbles and self-seeking arrogance will drive them. * * * Our strategy is to destroy the enemy from within, to conquer him through himself."

Now again I want to make this clear, I cast no aspersions whatsoever on the loyalty or on the patriotism of millions of German-Americans in this country. There are many of them in my own district, as fine citizens as you and I. But I do say that there are in this country today thousands of dyed-in-the-wool Nazis who

would not hesitate for one moment to carry out the orders—and are right now acting under the orders of Herr Hitler. Just a few weeks ago in Washington, I was told by one of the key men in the Department of Justice that they had voluntarily and were carefully following the movements of thousands of foreign secret agents in this country. They were keeping track of them and keeping aware of their movements and their actions by the process of wire tapping. The Federal Bureau of Investigation has employed wire tapping for only four types of criminal cases. Kidnapping, coercion, sabotage, and espionage. They were keeping careful track of these termites and then through that old bogeyman, the cry against the violation of civil liberties in a Senate committee, pressure was put upon the Attorney General, Robert Jackson, and he issued an order prohibiting all wire tapping by the Federal Bureau of Investigation. And so now these men are roaming this free land of ours at will while they are unimpeded in their attempt to bore from within and bring about the very destruction of the land you and I love so well.

I hold in my hand a list of some 563 officials and employees of this Government alone in the city of Washington who, according to testimony before the Dies committee, are members of the Communist Party or follow their leadership and carry out their orders. In my speech of the 13th, I outlined at length how the policies and aims of the Communist-controlled National Maritime Union were put into effect and are being carried out through the connivance of a man no less than Harry Hopkins' brother-in-law David K. Niles, who pulls the strings in the Department of Commerce, and who has direct contact with the topmost figures in our National Government.

Yes; it is about time we wake up in this country. I don't blame the President for becoming alarmed, because he knows these subversive elements have grown up under the very noses of, and often coddled and nourished by, some of our highest-placed officials in Washington.

Mr. President, if you are truly alarmed about a "fifth column" prove it by driving these vultures off their nests of carrion within the inner temple of your administration.

My friends, let us gird ourselves to legal preparedness against our enemies from within. As MARTIN DIES so ably stated in effect on the floor on the 17th: Our first defense against these termites should be the prompt enforcement of the laws that are now on our statute books and fully capable in most cases to cope with this Trojan horse, with this "fifth column."

By all means, let us speed up preparedness in this Nation—armed preparedness against invasion from without. Let us accomplish that preparedness under the leadership of men trained in the efficient expenditure of large sums of money, under the leadership of men trained in the efficient mass production of aircraft, of automobiles, of tractors, of munitions. Let us not entrust that responsibility alone to those men whose primary training has been in the military use of such equipment rather than in the production of it. As the President stated, arms and munitions on paper cannot defend this Nation. Let us not entrust this expenditure to starry-eyed New Deal politicians whose only claim to fame during the past years has been in their proven ability to pour money down the rat hole, to chase good dollars after bad. This huge expenditure should be directed by men who can assure a dollar's value for a dollar spent.

But finally, let us remember this. We have more problems on our home front, more local problems, more domestic problems within the confines of the Atlantic and Pacific than we had back in 1933. We still have 11,000,000 unemployed in this land, we still have a grave agricultural problem, we still have a social-security problem, we still have a mass of inefficiency in the operation of every branch of Government, and we are still continuing to spend for peaceful pursuits $8 for every $5 we are taking in. The widest breach in the wall of our national defense is the stupendous national debt which we did not have in 1933.

Let us not lose sight of those facts. Let not this White House inspired war hysteria blind us to our domestic problems. We recognize the need for preparedness, we are willing to pay for it, but those plans for the proper payment of this program should not be left over for the next administration.

As long last, due to Republican pressure, the administration leaders have recognized this fact, and so it is to be hoped that this Congress will pass a tax measure which will at least make a start toward paying this bill. However, we learn with dismay it is now proposed to raise the legal debt limit and resort to more borrowing.

We are told this is an emergency. Our greatest emergency is our national bank roll. Why in heaven's name doesn't the administration come forth with a definite plan to finance this on a pay-as-you-go basis? Fellow Republicans, this is an emergency—a national emergency—but it is our emergency and we should pay for it in cash—now. We have no right to pass this presently created debt on to our children and our children's children. It should be anything but comforting to this administration to realize that they have squandered, and wasted, and thrown away our money and credit the past few years until now the bank roll is exhausted.

Oh yes, Congress and the President should be, and are, a team, as the President stated, and should work together. I say to you again, this matter of payment should be carefully thought out and a pay-as-you-go plan decided upon. Therefore Congress should stay in session. And when I say work together I do not mean that Congress should blindly follow every whim of the occupant of the White House. At least he should be willing to reason with the 435 elected Members of the House of Representatives and the 96 Senators, elected to office just as he was by the people of the United States, by you and by me.

And so I say to you Republicans, to you young men and women before me here tonight, if there was ever a time in this land when you should bend every effort to elect a Republican President and a Republican Congress, it is right in this year of 1940. It is up to you to work like you've never worked before. It is up to you to promote harmony within our ranks. It is up to you to start working right now and work to the very end of the campaign in November.

Remember this, both France and England have found it necessary "to change horses in the middle of the stream." It was their only hope.

So do not get panicky in the face of all this third-term talk. Remember this: If you draft Roosevelt, he will draft you. It's up to you to save America.

Thank you and good night.

Memorial Address to George Washington

EXTENSION OF REMARKS

OF

HON. FRED BRADLEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 5, 1940

ADDRESS BY HON. FRED BRADLEY, OF MICHIGAN, AT THE GEORGE WASHINGTON NATIONAL MASONIC MEMORIAL SHRINE, ALEXANDRIA, VA.

Mr. BRADLEY of Michigan. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by me last evening:

When half the world today is aflame with war and hatred, it is fitting that we should come here to this peaceful shrine to again derive fresh inspiration and hope from the life and character of that mighty man and Mason, George Washington. From any and every angle, his versatility furnishes an example for emulation. Whether in war or in peace, whether as Master Mason or country gentleman, or as engineer or President, or as banker or realtor, or in any relationship of his many-sided life—in all spheres of which he was proficient—this generation, whatever our occupation or profession, may look to him to guide us and our country in the right way.

"A people is but the attempt of many
To rise to the completer life of one;
And those who live as models for the mass
Are singly of more value than they all.

"Keep but the model safe.
New men will rise to study it."

That we are in the midst of a great world crisis is unquestionable, and mere politics of the kind that deals only with the ponderables of the situation is impotent to solve our problems. But that brand of politics, of which our first President bore the imprint was the essence of true statesmanship which took into account the imponderables, the spirit of this American Republic. These offer a solution, based as they were upon eternal verities and those true principles which our founding fathers chose in the light of mankind's experience in the quest for a stable government of the people.

Knocking at the very gateway and citadel of the birthplace of freedom is a vast military machine seeking to overthrow Christian civilization and the heritage of liberty and to establish upon their ruins the iron rule of dictatorship. Yet, thank God, there stands a valiant and courageous liberty-loving people with this challenge:

"My name is Liberty
From out a mighty land
I face the ancient sea,
I lift to God my hand;
By day in Heaven's light,
A pillar of fire by night.
At ocean's gate I stand
Nor bend the knee."

Not far from this hallowed place the Virginia Bill of Rights, older than the Declaration of Independence, was written by George Mason, farmer friend and compatriot of Washington, and an intrepid advocate of freedom. That immortal document embodied the ideals which the French philosopher Rousseau had popularized as being the "natural rights of man."

At this crucial period in our history let us for a brief moment recur to just one sentence of that basic document, the forerunner

of the Declaration, from which Jefferson drew much of his inspiration. Listen to these words, pregnant with meaning for us today as well as for those in the days of Washington and Mason:

"The blessings of liberty can only be preserved by a firm adherence to justice, moderation, temperance, frugality, and virtue, and by frequent recurrence to fundamental principles."

This was the thought and those were the principles which animated and motivated the founders of this Republic, and upon such a foundation we should stand unswervingly against any enemy without or any enemy within seeking to undermine it.

We have no room in this country for a dictator. Washington was tempted to become one. A body of Army officers attempted to make him a monarch. Those officers planned not only a mutiny of the Army but a coup d'etat in which they had aimed to set up a monarchy. They wrote to Washington their intentions and expressed their belief that he would be an ideal monarch. This offer, Washington replied, "he must view with abhorrence and reprehend with severity." "I am at a loss," he said, "to conceive what part of my conduct could have given encouragement to an address which seems to me to be big with the greatest mischief that can befall our country. If I am not deceived in the knowledge of myself, you could not have found a person to whom your schemes are more disagreeable. Let me conjure you then if you have any regard for your country, concern for yourself, or respect for me, to banish these thoughts from your mind and never communicate as from yourself or anyone else a sentiment of like nature."

Doubtless when some time later Washington wrote a letter to Lafayette he had in mind the one to Col. Lewis Nichols, just quoted. To Lafayette he wrote:

"There cannot in my judgment be the least danger that the President will by any practical intrigue ever be able to continue himself in office, much less perpetuate himself in it, but in the last stage of corrupted morals and political depravity; and even then, there is as much danger that any other species of domination would prevail. Though when a people shall become incapable of governing themselves, and fit for a master, it is of little consequence from what quarter he comes."

If Washington were alive today, he might be inclined to be specific and say, "If the people are incapable of governing themselves it makes no difference if their master be a Hitler, or a Stalin, or a Mussolini, or somebody else."

Grover Cleveland, a great President, speaking of the Constitution, said:

"To us is delivered this ark of the people's covenant, and to us is given the duty to shield it from impious hands. It has been found sufficient in the past, and it will be found sufficient in all the years to come if the American people are true to their sacred trust."

Each of us here today is a receptacle of the faith of our fathers. In us, as in a safety-deposit box, are the securities, security against tyranny, security of our persons and property, security of our rights, and a due sense of our obligations. Let us, therefore, go forth from this sacred place, with the example of Washington before us, holding fast to our priceless relics, resolved to "keep the securities of the faith intact," by adherence to the principles transmitted to us by Washington and the men who established this American Republic.

Perkins Answers Taber

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 5, 1940

LETTER FROM THE SECRETARY OF LABOR

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a letter written by Secretary of Labor Frances Perkins to Representative JOHN TABER, as follows:

MAY 27, 1940.

The Honorable JOHN TABER,
Member of Congress, House of Representatives, Washington, D. C.

MY DEAR CONGRESSMAN TABER: I have just had called to my attention your speech in the House today with regard to the reorganization order transferring the Immigration and Naturalization Service to the Department of Justice. You are quoted as having said:

"We are going to vote for this reorganization plan because the President has not the patriotism nor the courage to remove the Secretary of Labor, a notorious incompetent, and one who for the last 7 years has steadily and steadfastly failed and refused to enforce the immigration law, and continuously admitted and kept here those who were not entitled to stay."

I have no objection to your expressing your opinion about my competency. That is a matter of personal judgment and you are unquestionably entitled to yours. I feel, however, that I must raise objection to that part of your statement which professes to be a statement of fact, namely, "That I have for the last 7 years steadily and steadfastly refused to enforce the immigration law and admitted and kept here persons not entitled to stay." This statement is not true, nor is it a mere expression of opinion.

The immigration law has been enforced faithfully and effectively during the last 7 years. For the first 4 of these 7 years the Immigration Service was in charge of the Commissioner, Col. Daniel J. MacCormack, an officer in the United States Army with a long record of effectiveness, efficiency, and patriotism. I appointed him for these reasons and directed him to enforce the law fairly and faithfully. We were confronted on the threshold of our duties with not only certain undesirable situations of administration which had been denounced by the Wickersham committee appointed by President Hoover, but by clear evidence of corruption in certain offices. It was our duty to correct these things and we did so. We directed our attention not only at the deportation of aliens not legally entitled to remain in the country, but also took vigorous steps to prevent the illegal entrance of aliens, including the smuggling of aliens, falsification of immigration documents, fraudulent activities in naturalization proceedings, all of which were found to be going on under the administration of the law.

We have reorganized and expanded the border patrol, one of the most effective branches of the service, for the prevention of illegal entry. We completely motorized the service with radio-call system and provided for the modern supervision in training of that service. We developed a system of education and training for naturalization, which is practical and aims to enable the courts to make proper selection of those who are attached to the principles of the Constitution and so eligible for citizenship. These policies have been continued under Commissioner J. Lawrence Houghteling.

I also appointed a committee of experts, external to the Department (Dimock, Hart, and McIntyre) to study the problems of immigration. On the basis of their report a reorganization in the interests of making the service still more effective and of giving to the people in the field a better knowledge of the law and the court decisions is being set up. A classification survey of positions in the Immigration and Naturalization Field Service has been completed in the interests of greater efficiency, following the recommendations of the committee.

The changes made, at times misrepresented by some, were designed to improve the system. They have cleared up irregularities and dishonest situations, and have accomplished many of the reforms badly needed and recommended in the report of President Hoover's Wickersham committee in 1931.

Every person admitted, temporarily or otherwise, to the United States during my administration of the immigration law has been admitted in accordance with the laws as enacted by the Congress of the United States. These admissions for brief periods as temporary visitors have been under proper safeguards. In a number of deportation cases involving no subversive or criminal charges, but which would have meant separation of families and the abandonment of American citizens, I have deferred making effective final deportation orders while legislation giving relief in these cases was pending in Congress. These cases have been reported to the Immigration Committees of Congress which were considering them in connection with private bills, and with proposals for general remedial legislation.

Throughout my administration the immigration law has been enforced energetically, fairly, and humanely under my direction.

I have been in public office for many years. I have a reputation for service to the public and for faithfulness in discharge of public duty, and for placing the public interest above any other, which I am sure you will admit I should and must defend in fairness to those who have placed their confidence in me, as well as to myself. I have tolerated many expressions of opinions adverse to me personally in my administration of this Department, believing that it was not in the interest of the public to raise personal objections to the free expression of opinion, however unfavorable. Some of the expressions led to statements on the floor of the House and to impeachment proceedings. These charges finally culminated in an investigation by the House Committee on the Judiciary resulting in a finding of lack of any evidence to evade responsibility to enforce the law, or of failing or neglecting or refusing to enforce the law against any alien.

Your statement of today, however, I feel I should not accept without protest. Since it was offered as fact, sir, I believe that it is in the interests of justice not only to me but to the 4,000 men and women of the Immigration Service who have faithfully carried out the law, since they cannot speak for themselves, that this letter be made public.

I know that many things are said in the heat of political controversy which one does not wish to stand by, and I am sure you will understand that I bear you no personal animosity, but wish to correct the record. I realize that these statements were made under a rule of immunity which Members of Congress have and for that reason I am sure you will be the first to wish to correct anything that is misleading therein.

Yours very sincerely,

FRANCES PERKINS.

America's Greatest Danger Is Roosevelt

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 4, 1940

Mr. HOFFMAN. Mr. Speaker, when Roosevelt was first elected there was a vague rumor which went the rounds that he would be the last President of the United States. Very few, if any, gave that rumor a second thought but, in view of recent events, it is all too apparent that he and some of his adherents, who depend upon his coattails for their jobs, are quite convinced that he and they are quite indispensable.

In fact, the President at one time sought to disarm those who were becoming fearful that he was driving toward a dictatorship by getting up in the middle of the night and telling the public through the newspaper reporters that he had no thought of being a dictator. Perhaps he meant that when he said it but it is now certain that he has changed his mind, for last night, he said, according to this morning press, that he saw no good reason why Congress should continue in session for the duration of the emergency, as desired by the Republican Members. Sarcastically, he said, the press reports, the situation does not require Congress to remain in session except for the laudable goal of delivering speeches.

So he has evidently reached that point where he considers himself all-sufficient, notwithstanding his record of complete failure to meet the problems which have confronted him during the past 7 years. He now sees himself as a dictator, and like all dictators, cannot tolerate the presence of the people's representatives. So like a dictator, he would send the people's representatives home in order that there may be no check on his actions.

An editorial from the Chicago Tribune of May 20 shed some light on what we would get with Roosevelt in the White House for another term. That editorial is as follows:

[From the Chicago Tribune of May 20, 1940]

THE THIRD TERM IN ITS TRUE LIGHT

The third termers are trying, as was expected, to turn the war excitement to their advantage. They think their timing has been good. They could foresee that the news of a German drive on Paris would cause a series of shocks in this country. It would present what might be the finale of a struggle for power in a world to be shaped by the outcome. Sentiment would be deeply stirred.

Mr. Roosevelt dramatized the moment before Congress. Many people who had not lost their heads began to show signs of having them turned. Commentators and public men began to talk nonsense about the united front, the adjournment of politics, and the rally around Roosevelt, the indispensable. It was proposed that the Republican convention should not be held and that there should be no election.

This is hysteria taking high jumps. When people sober down a little they will find that the timing was not good. It put the third term in its proper light just when it should be studied in relation to external and internal difficulties.

If the remainder of this year is to be one of great anxiety for the American people it ought not to find them divided by a serious constitutional question affecting their form of government. The third term will present a constitutional question. Tradition and usage have added an unwritten provision which declares it the sense of the country that a President shall not serve more than two terms. The tradition has never been broken. The first attempt to break it, particularly at this time when dictatorship is causing so much trouble and creating so much alarm, would divide the American people as they have not been divided since Civil War days.

Mr. Roosevelt's candidacy will do that. No other man's will. He alone can divide the country and he will if he demands renomination and gets it. The United States will go at once into a disrupting struggle, one it should avoid if there are external dangers. If there were no other reasons to stop all third-term talk, the war abroad is enough. It makes Mr. Roosevelt's candidacy a national danger.

He has proved himself incompetent to manage the peacetime economy of the United States. If the country is unprepared to meet emergency it is his fault. He spent the money. As a wartime Executive he would be a greater disaster.

The third termers speak of his experience as something which will be indispensable to the Nation for another 4 years, whatever happens abroad or at home. The worse things get abroad and at home the more Mr. Roosevelt's experience, so say the third termers, will be needed to pull this country through. Against Mr. Roosevelt's experience the American people may set their own. Their experience in the two terms should convince them that they could not stand a third term. In experience against experience the people have had the worst of it.

The experience of the people has been with the deepest and most protracted depression the country ever had. It has been an experience with constantly increasing debt and taxation, of stagnation in private investment, of continued and undiminished unemployment, and of continued and undiminished subsidies and doles.

The experience Mr. Roosevelt has gained has been in doing things from which the people suffer. It is an item in his experience that he must ask, in the eighth year of his two terms in the White House, for $1,111,000,000 to be spent for relief, nearly a billion of it to be expended as he sees fit in the next 8 months.

Mr. Roosevelt's experience has made him adroit in the use of public funds in the year of a national election. The reports to Congress are full of the scandals of it. The amount Mr. Roosevelt asks to relieve destitution by methods unknown in this country until he became President is about the amount he asks for emergency defense. The emergency is one created by his administration.

These are some of the experiences Mr. Roosevelt has had in the White House and they are some of the experiences the people have had with him as head of government. The record indicates to any person who will examine it that the country would have the greatest difficulty in surviving 4 more years of this as a self-governing, representative democracy. The planned society of which Mr. Roosevelt is the chief architect has brought the country to the choice between finding another Executive or taking another form of government, which will impose on the American people the economic conditions prevailing in Europe.

The people of Europe went into economic servitude because they were not in time able to get out of conditions such as Mr. Roosevelt's experience is imposing upon this country. It may be that when the third termers refer to the value of Mr. Roosevelt's experience they mean that, having prepared the country for a collapse into either economic anarchy or economic autocracy, he is the one man fitted to manage the autocracy. If you concede that that autocracy is desirable, the point about Mr. Roosevelt's experience can be taken into consideration with more intelligence.

The Organization and Administration of Relief

EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 5, 1940

ADDRESS OF HON. CHARLES A. SPRAGUE, GOVERNOR OF OREGON

Mr. ANGELL. Mr. Speaker, under leave to extend my remarks, I wish to include an address by the Honorable Charles A. Sprague, Governor of Oregon, delivered June 3, 1940, at the Conference of Governors held at Duluth, Minn. Governor Sprague spoke on The Organization and Administration of Relief. His address follows:

THE ORGANIZATION AND ADMINISTRATION OF RELIEF

The more I study the problem of relief the more I am reminded of those characters in Greek mythology whose plights are part of the common legend of mankind: Tantalus and Sisyphus. Tantalus, you recall, was punished for revealing the secrets of his father, Zeus, by being plunged chin-deep in water. When he tried to drink, the water receded from his lips. When he sought to pick the luscious fruits that hung from boughs over his head they were raised just out of his reach. His plight suggests that of thousands of people in recent years who have become "reliefers."

Probably not a Governor here but has had them haunt his office. We have seen their need, and recognized it as real; and then realized how inadequate are the efforts to satisfy that need. All of us have heard the stories over and over again, the relief check which will not quite cover the rent and the provisions; dental service needed and no money to pay for it; old people caught with their life's savings wiped out and not yet eligible for old-age assistance. We Governors have seen these beaten, despairing people

for whom an adequate supply of life's necessities seems forever out of reach. Like Tantalus, they appear doomed to continuous deprivation.

Then there was Sisyphus, crafty king of Corinth. Because he deceived Zeus he was condemned to spend his time in the lower regions rolling a stone uphill, but never getting it to the top. Always it rolled down again and he had to start his task again. The modern taxpayer suffers the fate of Sisyphus, particularly with regard to this burden of relief. He toils manfully up the slope trying to reach the crest, a plateau reached; each year he has to get under a heavier burden of public relief, until he, too, despairs.

We, as Governors, are sympathetic with the sufferings of the modern Tantalus and Sisyphus. We see the reality of human need, on the one hand, and worry also over the burden which falls on the backs of those fighting to remain self-supporting. We also know that if Sisyphus, the taxpayer, collapses, Tantalus, the reliefer, is left without hope.

I have been startled at the expansion of costs of the various public-relief programs in my own State. Back in 1932, which we regard as the depth of the depression, the total expenditure in Oregon for relief was probably not over $3,000,000—the figures have not been compiled. For 1938 the total for all programs reported by the Bureau of Research and Statistics of the Social Security Board amounted to $26,577,000, and for 1939 $27,664,000. However, the latter figures do not include unemployment-compensation benefits, which amounted to approximately $6,000,000 more in 1938 and $4,000,000 more in 1939.

You recall how in the early 1930's we said that if we could just get our factories to running again our relief load would ease off. Well, in Oregon, the total pay rolls of firms reporting to the State Industrial Accident Commission expanded from $74,123,000 in 1933, the low point of the depression, to $158,357,000 in 1939, or more than double. Yet the figures already quoted on the expansion of the public-welfare program during the same period show how foolish was our expectation.

It is evident, therefore, that hope is vain for any radical reduction in costs of public relief unless and until there is a radical change in public policy, both Federal and local. We must therefore regard public relief or welfare as a permanent addition to the list of publicly supported obligations on top of the older burdens of education, care of criminals, insane, and defectives, public health, and recreation. Accordingly it is important for those charged with executive responsibility in the States to develop sound, permanent programs of welfare administration. That is the theme of my paper today.

I shall relate the history and experience of welfare work in Oregon, not only because I am most familiar with the conditions of my own State, but also because I feel this administration has been singularly successful. The credit goes chiefly to my predecessors in office, but I have been happy to build on the sound foundations they laid.

In predepression years the counties in Oregon, as in most other States, were responsible for care of indigents. The poor farm was a historic and dreaded institution. In cities, private efforts for relief were often organized under the associated charities. There was, however, a growing demand for mothers' pensions and for old-age pensions to spare the impoverished aged the ignominy of being sent to the poorhouse. Our State struggled through the early depression years, with county assistance, liberal private contributions, and a measure of Federal funds for loans or public works.

In February 1933 our State legislature made its first appropriation, $15,000, to meet the costs of administering relief funds from other, chiefly Federal, sources. At a special session in December of that year, following repeal of prohibition, a State liquor monopoly was set up and $3,000,000 appropriated from its prospective profits. Since then the State's portion of welfare expenditures has been provided from proceeds of liquor control, supplemented with appropriations from the State general fund. The aggregate of the appropriations made available for this biennium are $9,260,000, and the State operates on a cash basis both for its general and its public-welfare funds.

The type of organization set up in the Emergency Act of 1933 has remained the same. The State relief committee was constituted with seven members, to be named by the Governor. The county relief committees were likewise composed of seven members, four of them to be named by the Governor, the other three to be the elected county commissioners or members of the county courts or their nominees. Responsibility for the administration was thus vested in the Governor through his power to appoint the State committee and the majority of the county committees, including the chairman. The administration was by no means centralized in the State committee or the Governor, however. The 1935 act gave the county committees the duty of examining all applications for relief and fixing the amounts, with the State committee charged with the duty of approving the grants.

The present law authorizes the State committee to supervise administration and prescribe rules and regulations to be uniform throughout the State, and old-age assistance grants are subject to State approval. The practice is, however, for the county committees to administer public welfare in the counties, without interference from the State committee unless they get out of line. The fact that the Governor is the final authority is, of course, a powerful factor in preserving cooperation between the State and local committees.

In 1939 the legislature rewrote the laws covering relief. Recognizing the permanent character of the programs, the title of the agency was changed from "public relief committees" to "public welfare commissions." Members are appointed "on the basis of interest in and a knowledge of the field of public welfare," and hold office for 4-year terms.

From the beginning, public relief in our State has been administered on a nonpolitical basis as far as the State organization could require. The first State relief committee, named by the then Governor, Julius L. Meier, was composed of high-minded, public-spirited citizens. His successor, Charles H. Martin, appointed persons of similar type; and I have retained, with only two exceptions, the appointees of my predecessor. The first State law on the subject by inference required a nonpolitical administration. It specified that appointed members of county committees should not be removed by the Governor except for cause, and then only after notice and hearing. It also authorized the county committees to appoint relief officers, who should be experienced and qualified persons, chosen solely on the basis of their executive and administrative qualifications, and with especial reference to their experience in relief work. That policy has likewise prevailed through the years.

As we look back now that law set an impossible requirement, for there were not a sufficient number of experienced and qualified persons to act as administrators of relief. The committees had to do the best they could, which meant to take the material available, train it or weed it out, and build up a competent, trained personnel.

It is because our State has operated on this basis, selection of personnel by the administrative heads on their qualifications and not on personal or political patronage, that we object vigorously to the new imposition of the Federal Social Security Board for a new so-called merit system of staff selection. We know the new machinery will prove far more costly, thus reducing the amount of funds available for assistance to the poor; and fear that it will give us a less competent and less loyal and efficient staff. How can you by formal examination measure one's understanding of human nature, or the fine balance between sympathy and moral courage which are required of case workers and administrators? We have acquiesced grudgingly in the mandate from Washington and only under threat of denial of grants to our aged, our dependent children, and our blind. I should like to see this conference adopt protest against this dictation from the Federal Government. It is fair that the Federal Government, which contributes about 30 percent of the welfare funds, should be sure that its moneys are properly expended; but that does not necessitate imposing a rigid system of personnel selection.

In Oregon virtually the entire welfare program is concentrated in the hands of the public-welfare administration, State and county. General assistance, old-age assistance, aid to crippled and dependent children, aid to blind, certification to W. P. A., N. Y. A., and C. C. C. are all handled by the same organization. This gives a unity of administration, prevents duplication of staff and friction between programs. Federal cooperation is greatly simplified. Exceptions to this administration are unemployment compensation, hardly a welfare program, which is handled by a separate commission; and maternal care, which is administered by the State board of health.

Moreover, State appropriations are made in lump sums, giving the administrative agency power to apportion funds among the several programs. Thus we avoid having appropriations for some categories excessive and for others deficient. While for some programs the demand can be charted with a fair degree of accuracy, for others, particularly general assistance, it is impossible to forecast the need exactly. A heavy winter storm may run up the cost many thousands of dollars in a single week. Flexibility in financing, therefore, has much value.

Sometimes this control works otherwise, however. Under the pressure for old-age assistance our expenditures for that purpose ran up to two-thirds of the total welfare expenditures, while the national average is just about 50 percent. Realizing this was disproportionate, the State committee adopted an order a number of months ago stopping receipt of new applications until the existing rolls could be reexamined. As a result the proportion for old-age assistance has declined to around 60 percent, a figure still somewhat out of line.

All grants are based on the existence of need, and in case of the aged, near relatives are obligated to take care of their needy kin. A saving clause of value is one in appropriation bills which limits grants "in any case only to the extent that funds for each such purpose are available." This prevents suits to enforce grants and a piling up of obligations.

Previously I referred to the administrative relationship between the State and county commissions. This same dual responsibility extends to the burden of finance. All general relief is handled on a 50–50 basis. For the other welfare programs where the Federal Government contributes one-half, the remaining one-half is divided 60 percent from the State and 40 percent from the counties. Administrative costs are all borne by the State save for some Federal contribution. Cities are exempt from any control of relief administration and from any financial burden. We believe a division of financial responsibility is important in holding costs within reasonable limits.

It is significant in the history of Oregon relief administration that there has never been any break-down, either of organization or of supplies. There has never been any major demonstration in protest. There has never been any scandal over the handling of funds or the making of appointments. During the whole period the State has had but one State administrator, Mr. Elmer R. Goudy, to whose sound judgment is due much of the credit for the success of the Oregon administration.

One thing which I have worked out is the close coordination of the welfare department with other agencies dealing with employment. For example, the employment service, also under the Governor's control, works closely with the welfare department. When seasonal work opens up, as it has recently in the berry harvest, the welfare department drops employables from its rolls in the regions affected and the employment service places them in jobs. We thus lighten the relief burden and reduce to a minimum the importation of labor at seasonal peaks.

Our employment service has also been preparing a job census showing surplus and deficiency in particular trades. This information is to be used by the vocational education department in its training program. There has been for some time a shortage of skilled metal workers, while at the same time hundreds of unskilled workers have been supported by Government welfare or relief programs. It seems to me essential to coordinate all agencies, public and private, for a constructive attack on the employment problem.

In this connection I wish to report that we have used, to excellent advantage, advisory committees for our employment service. These committees have accomplished much in getting employers and labor organizations to work together. Believe it or not, in certain lines of industry, notably general contracting, employers and labor unions have agreed to use the State employment service as the referral agency, the hiring hall. Control of the hiring hall, as you know, has been a bitterly contested point in labor relations. We feel in obtaining recognition of a neutral State service for this work, we have made an important contribution to industrial peace.

In summary our experience in Oregon justifies these principles for the organization and administration of relief:

1. Unity of organization, under a common authority, for administration of all programs, with appropriations available in lump sums, and the administrative authority given broad powers of regulation and allocation of funds.

2. Vesting authority in appointive, nonsalaried commissions, with operating staff selected on basis of qualifications.

3. Division of administrative and financial responsibility between the State and counties.

4. Close cooperation with other Government agencies looking to economic rehabilitation of those on relief.

I wish to add this comment respecting this business of relief. While there appears scant hope for "relief from relief" either for the taxpayer or the recipient of public aid, we dare not let the welfare programs be such as will encourage and develop a class of permanent mendicants. The spirit of relief administration should be that of self-help, to stimulate others to help themselves wherever it is possible. Keeping multitudes on public doles inevitably results in their deterioration as self-reliant and self-respecting citizens. The social consequences are as dangerous as the economic burden. Our social security in the future is going to depend quite as much on whether we cultivate the sense of personal responsibility for self-support among our people as whether we relieve the distress of the destitute.

An Adventure in Public Service

EXTENSION OF REMARKS

OF

HON. JOSEPH J. O'BRIEN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 5, 1940

ADDRESS BY J. EDGAR HOOVER, DIRECTOR, FEDERAL BUREAU OF INVESTIGATION

Mr. O'BRIEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an address of J. Edgar Hoover, Director, Federal Bureau of Investigation, to the graduating class of Drake University, Des Moines, Iowa, June 3, 1940, from Washington, D. C., through the Mutual broadcasting network:

Although duty detains me in Washington, I am glad to have this opportunity to address the graduating class of Drake University and their assembled friends.

Commencement exercises symbolize the culmination of years of hard study and the beginning of manifold careers. This is the proper time to pause and view the trails which will be followed through life. Where these trails will lead for you, the graduates of Drake University, no one can foresee. One thing is certain—pitfalls lie on every hand and the obstacles before you can be surmounted only by superior intellect, industry, imagination, integrity, and initiative.

War is raging abroad. Its fire and flying embers menace our shores, as they did over 20 years ago. Then, as now, the United States became the jousting ground of espionage agents and saboteurs, each seeking to impede America's program of national defense, through the destruction of industry and the poisoning of public opinion.

In meeting the challenges that confront us, we all must give our best endeavors, if democracy and liberty are to survive. Life can be better, if we will unite to make it so and protect our Nation from the possible onslaughts of sadistic butchers. Today, the man who will not serve in this task of preparedness has no right to call himself an American.

On the thresholds of your careers, you must accept a sacred responsibility. The time is ripe for a rebirth of patriotic citizenship. We must put an end to chicanery, corruption, nonfeasance, and malfeasance which defeat efficiency and achievement.

It seems to be an American trait to be indifferent to civic responsibility. It is this indifference which permitted the great American public to stand idly by during recent years while crime ran rampant. Men fail in business because they underestimate the ability of their competitors. Law and order break down in a community because citizens underestimate the power of the underworld. Internal defense falls apart because a nation underestimates the potential threats which lurk on every hand. It is also, I am happy to say, an American trait to arise in times of emergency to meet all challenges. That time has now arrived.

I urge you to seek adventure in public service, not as public servants, but as public volunteers. The greatest threat confronting our Nation today lies in the apparent lack of a stout-hearted spirit of preparedness and a high moral courage to face the truth. We need a youthful spirit to insist upon and work for the rebuilding and reestablishing of the strength and sinew of national unity and preparedness, by which we may hope to avoid war and protect ourselves from the enemies within our gates.

If we would protect the future well-being of our Nation, our communities, our homes, and ourselves, we cannot wait for tomorrow, because community after community is threatened by the insidious forces of lawlessness and subversion. Within the span of your lives, unless you help to change the picture, three out of every four of you will be victimized by the forces of lawlessness, through loss of property, through injury, or even by the visitation of death itself.

Preparedness is a national necessity, whether against criminal elements or foreign foes. It is the cheapest form of safety. It is the acme of adventure in public service.

Sixteen years ago the Federal Bureau of Investigation was inspired by the interest and support of that great American, the Honorable Harlan Fiske Stone, Justice of the United States Supreme Court, then Attorney General of the United States. Under his leadership the F. B. I. was commissioned to effectively serve the American people. His views have been subscribed to by each of his successors in office, so that today your F. B. I. is respected by the good citizens of America as much as it is feared, hated, and vilified by the scum of the underworld, conspiring Communists, and goose-stepping bundsmen, their fellow travelers, mouthpieces, and stooges.

The F. B. I. has a record of performance which has set the pace for scientific law enforcement everywhere. It now shoulders many tasks in protecting America, not only from the kidnaper, extortioner, and bank robber, but from the espionage agent and saboteur. And every dollar spent for this task by the F. B. I. over $6 are returned to the Government or to individual taxpayers.

Naturally, everyone cannot engage in such a specific adventure in public service. But today's adventurer in public service can help to clean house, to isolate the forces which produce crime, and to inoculate the community against them. Nothing is so important in the perpetuation of America as the building of homes. Unless the sanctity of the home is safeguarded the pillars of democracy crumble.

Then there is the important matter of home training, which of necessity must be a continuation of church training. The lessons taught in Sunday school must be retaught and lived in the home. The crime problem today is primarily a youth problem. It is not pleasant to face the fact that 12 percent of all murderers, 45 percent of all burglars, 32 percent of all thieves, 15 percent of all arsonists, and 52 percent of all automobile thieves arrested are under voting age. These facts point to the responsibility which you must assume in establishing homes of your own and in proving the wisdom of teaching respect for the rights of others.

Let no one tell you that family discipline, just because it is old-fashioned, has no place in America today. It is an old saying that "youth must have its fling," but at the same time it must be remembered that we cannot depart from the traditional paths of honor without ending in the shambles of character degeneration. What we need in America today is a return to the God of our fathers and a most vigorous defense against the minions of godlessness and atheism, which are allied with the powers of destruction that today threaten America's future.

Against these mass worshippers of perversion, degeneracy, and murder we must present a unified phalanx of Americanism, marshaled from every walk of life. Now is the time to put our houses in order and face the foes which, like termites, weaken the internal structure of America, masquerading as they do behind a hundred fronts.

The Communist and the bundsman represent more than a mere political party. They espouse a way of life, a fanatical worship of materialism, destruction, and the blacking out of decency. They stand for the overthrow of democratic institutions, social, governmental, and religious, even while their lying leaders in our midst seek to delude us with a mumbo jumbo of high-sounding phrases. Their "fifth-column" methods have permeated into every walk of life. By falsehood and fakery they gnaw at the Nation's vitals. Their insidious propaganda in one form or another has even gained an entry into some of our churches and many of our schools. Unless we resist their efforts on a united front, America will rue the day it let down its bars of self-respect—then it may be too late to act.

Conquering the foes of democracy is the greatest of all adventures in public service. The fulfillment of this task is of paramount importance. It means a rededication on all fronts to Americanism and its bulwarks.

The founders of our Constitution believed in a living God as we do; the would-be seducers of our liberty today believe in no God, except one of carnage and death and destruction. The confirmed criminal has nothing but sneers for the Almighty. It is the same with the multinamed "fronts" of the foreign "isms" which seek to mire us in the abysmal depths of despair. They should be reviled for what they are, a cowardly, slithering mass of humanity, too evil and too slinking to assume their true identities, crawling to their objectives while concealed in a jungle of deception. From their spokesmen you hear much of freedom of speech and freedom of worship. They want freedom of speech for themselves, while gagging others. They want freedom of action, while the hands of others are bound, so they may plunder and rob. They want freedom of worship, so they may erect the idols of Lenin and Marx and others of similar ilk. Our Constitution grants freedom to the law-abiding, but what these vermin seek is license. America has no room for these espousers of foreign ideologies, which are alien to everything we cherish.

The lying propaganda machines of un-American bodies have been working overtime, while all too many American citizens have been hoodwinked by their falsehoods and tirades and vituperations. From these same sources have come charge after charge, designed to discredit and blacken the good name of the Federal Bureau of Investigation and to undermine public confidence in law and order. They stop at no level in their efforts to misrepresent the organization which has made American homes safe from the kidnaper and which is now in the first line of defense against the foreign enemies of America.

Many of the Communist Party's leaders stand convicted, in courts and in the public mind, of falsehood and deceit, but they are still on the march, burrowing deeper and deeper into our system of democracy.

There is a sneer behind their every smile and a vicious lie in their every promise of Utopia. If the land whose banners they carry is Utopia, then let them go there and enjoy it. America is good enough for us and we do not want it tainted by the poisons of foreign "isms."

It is with a feeling of devotion to my country that I find myself engaged in seeking recruits this morning; in seeking volunteers in a career of public service. We owe it to ourselves and to our country to make our voices heard and to stand unified against the forces which menace America. You graduates of today are tomorrow's heroes. Without your intelligence, loyalty, common sense, and courage, America may not withstand the fakers who pretend to hand us heaven, while concealing hades of violence, destruction, and revolution. No other adventure in life is so worthy. No other cause is more just. No other aim can exceed this in glorious accomplishment. May all of us join in a crusade for the betterment of America.

Direct Relation Between the Circular and Hyperbolic Measures

EXTENSION OF REMARKS

OF

HON. FRANK O. HORTON

OF WYOMING

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 5, 1940

STATEMENT BY MIFF M. BUTLER

Mr. HORTON. Mr. Speaker, one of my good friends, Mr. Miff M. Butler, of Seminoe Dam, Natrona County, Wyo., has recently discovered a new relationship between pi and e and in order to date, as well as to give a partial but necessarily incomplete description of his discovery, I ask unanimous consent to insert the attached statement by Mr. Butler in the RECORD.

Mr. Butler claims that this is the first basic mathematical principle ever developed in the United States.

DIRECT RELATIONSHIP BETWEEN THE CIRCULAR AND HYPERBOLIC MEASURES

In using mathematics, a number of relations of different numbers are known to exist, while other relations are felt to exist but have so far eluded exact definition.

Euler (1707–83), who evolved the figures now used for cannon fire, indicates the strange interrelation between the number 3.1416, etc., which is the result of dividing the circumference of a circle by the diameter, and the number 2.178 (whose hyperbolic logarithm is 1). Euler uses the square root of minus 1 to arrive at his relation and therefore arrives at no definite conclusion. The square root of minus 1 is the base of many figures of mathematics but defies definition. It is used, however, to correlate phenomena that are known to exist but cannot be explained and may be said to be the base of Poncelet (1788–1867) reciprocity and Riemann (1826–66) surfaces.

Three more relations that are known to exist are:

The logarithm of 10 to the base of 2.718 (e) is 2.30.

The transcendent angle and the number 10.

The number 10 may be said to be exact, but the remaining figures are obtained by questionable methods—that is they are based on the use of McLaurens series or some other method of like character, that lack definite proof though analogies show them to be very close. They may be said to be the value where two nearly parallel lines intersect and to say that the value is between these lines—that is within the convergence, but not necessarily at the end—has not, to my knowledge, been proven incorrect.

The importance of these figures is great and they form the base of energy problems and nearly all problems that contain a number of variables such as land values, insurance rates, monetary basis, etc.

It is significant that the figures below were obtained on the third trial after evolving the continuous time curve described later and that figures conservatively estimated at thousands of pages have been examined with a possible connection between the circular constant 3.1416 and the hyperbolic constant 2.718 in view.

The values obtained here are all within the convergence (above mentioned), while Poncelet reciprocity is indicated.

If the unit is taken as divided into 10 subdivisions whose values are governed by a law similar to the compound interest or snowball law, that is each number is 10 times the preceding number after 1 has been added. These 10 units are further divided into two divisions with one ten-thousandth as the beginning of one of these divisions and five ten-thousandths as the beginning of the other, so that the two numbers 5.4321 and 9.8765 are obtained.

The square root of 5.4321 is 2.33, with a remainder of .32 (decimal points disregarded), which are the logarithm of 10 to the base 2.718 and the reciprocal of 3.1416 (the circumference of circle divided by the diameter), respectively.

The square root of 9.8765 is 3.142, and the reciprocal of the remainder is 2.3, with 2.72 as a remainder, which figures are the circumference of a circle divided by the diameter plus the reciprocal of the logarithm of 10 to the base 2.718, with a remainder of 2.72 which is the hyperbolic base or number whose hyperbolic logarithm is 1.

Furthermore, the sum of these two numbers is 15.3086—one-tenth of which is 1.53, which is as high a value as the transcendent angle may reliably assume.

Mathematical respectability and correlation of these remainders is given by the equation (McMahon, 1906) the derivative of X divided by the square root of the square of X plus the square of a is the sectorial measure, the derivative of whose hyperbolic sine is the ratio X to a.

The occurrence of the above significant figures shows their direct connection by law.

CONTINUITY

In an attempt to fill out the interval from zero time to a world of stratified gas (conjectured by LaPlace and substantiated by known mineral associations) the gravity law of Newton and the bursting atom of LaMaitre are not tenable with the observations of Kepler; i. e., that the planets move about the sun in a path of an ellipse, with the sun as one focus. This conclusion is derived from the fact that the radius is the only variable and that accordingly the distance should either increase or decrease continuously and not follow Kepler's ellipse. Furthermore, the force of gravity would be much greater at the poles than at the Equator, where centrifugal force would be the only variable.

With zero time numbers immediately become essential, and, as far as I know, existing analytic geometry is inadequate. It is customary to speak of minus 1 as plus 1 rotated 180°, and then to make use of the square root of minus 1 to go from plus X to minus X in the infinitesimal distance of the "y" axis.

As a possible solution of this problem the transcendential angle (gudermanian) was drawn (Gauss-Argand diagram) with a constant unit radius times the gudermanian of the angle. The advantages of this figure is that it retains the quadrants, passes through zero continuously from $+1$ to -1, and indicates the rotation so well exemplified by the earth. The curve is made

by beginning at zero and following through continuously to 90° where it is assumed to be rotated 180° in a plane orthogonal to the above, at this point it resumes its course in the original plane and continues 90° in the same direction to zero and continues through zero into the fourth quadrant; thence through 90° to the "y" axis; thence in the same orthogonal plane as above 180° in the same direction as the previous rotation where it passes in the original plane 90° to the point of beginning.

This is a complete cycle and is my conception of time.

Orthogonal lines (not radial) may be taken to represent space (solids are circles, liquids are horizontal, and gases are hyperbolas). These same lines or those orthogonal to the Z plane circle may represent tension which will conform with the force of gravity as it is known to exist and if tension can be traversed only normal to surface, the orbit of the planets is defined.

The above orthodox (partially) Riemann-Cauchy surfaces necessitate the use of two or three foci which are indicated by taking unity and dividing into 10 units according to the gudermanian 10 (N+1) with 5 on each side of the center to obtain 5.4321 and 9.8765. Though this phase of the problem is unsolved the answer may lie in temperature phenomena unavailable to me.

RÉSUMÉ OF PROGRESS

The purpose of this work is to obtain a more secure and definite base for science—where the answer is not conclusive, it is given as a possibility for improvement.

Phenomena used for end points (considered known) are—

(1) Electrons (atomic rays)'; (2) gaseous stage (sun); (3) high-temperature minerals, i. e., chromite in peridotite with diamonds, spinels, anorthite, graphite, asbestos, and titanium irons; (4) mountain ranges; (5) igneous rock associations; (6) juvenile springs; (7) ore deposits of magmatic origin, etc.

Significant definite conclusions (partially): Limestone is of igneous origin and definitely points to the origin of cell life.

Mountain ranges are the result of reaction between ocean water and deep formations (fairly well corroborated by the location of major faults and hot ocean currents); graphite exuded from iron reacts with the hydrogen of catalyzed ocean water to form hydrocarbons (oil) and its contact with upper solutions accounts for the occurrence of sulphide ore deposits predominantly at mountain intersections and thrust faults.

An attempt to form definitions needed in science: Tension is the result of a change in motion, which in turn defines electricity and atomic structure. Rupture of tension produces heat, mostly lost energy, and rays which assume independent motion to form mass.

This should be sufficient data to indicate the field in which it is hoped to show the major role performed by the newly found relation of pi and e.

Cooperation of Eisele & Eisele, of Iron Mountain, Mich., is acknowledged.

Respectfully submitted.

MIFF M. BUTLER.

Values in Education

EXTENSION OF REMARKS
OF
HON. HOMER D. ANGELL
OF OREGON
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 5, 1940

COMMENCEMENT ADDRESS OF HON. CHARLES A. SPRAGUE, GOVERNOR OF OREGON, AT MONMOUTH COLLEGE, MONMOUTH, ILL., JUNE 4, 1940

Mr. ANGELL. Mr. Speaker, I ask unanimous consent to extend my remarks by including an address by the Honorable Charles A. Sprague, Governor of Oregon, delivered June 4, 1940, at the commencement exercises of Monmouth College, Monmouth, Ill. The address follows:

VALUES IN EDUCATION

On the campus of the University of Oregon stands the statue of the Pioneer Mother. A citizen of Oregon erected it in tribute to his own and to other mothers who had journeyed 2,000 miles across the continent to set up homes in a new country. The sculptor has caught and frozen in bronze the hands worn with toil, the face lined with care. Yet this pioneer mother seated there on a block of stone reveals a mood of calm serenity, almost of benignity in proof of her spiritual triumph over the hardships of life.

What inner fires burned in the souls of those men and women to drive them across prairie and desert and mountain? What unrest stirred within them; what goal attracted them? It was not so much the awakening of a nomadic spirit inherited from ancient ancestors as it was the quest for a land in which to settle, a land fuller in opportunity for themselves and their children. That inner urging was the restlessness of dissatisfaction which has driven the race and especially the American people forward.

Though the pioneers failed to realize full satisfactions for themselves, there was always hope for their children, and a consecration of purpose that the way for the children would be less rugged and painful. The means by which they hoped to smooth the path for their children was to furnish them with a better education than they themselves had enjoyed. So it was that schools were founded with the earliest fixed settlement. That is why the pioneers sacrificed to provide schools and academies and colleges. It was out of such devotion that Monmouth College was born. How fitting it is, therefore, that the statue of the pioneer mother who suffered privation to provide education for her children should stand on the campus of an educational institution. There she may see the fruit of her labors in the institution itself, and the fruit of her loins in the youth who utilize its facilities.

That spirit of parental self-sacrifice has not died out. That goal of giving a lift to children by means of an education, a college education, if you please, has not been abandoned. Assembled here today are parents for whom this is one of the great days of their lives. They see their hopes fulfilled, their dreams realized, their toil rewarded as their children today receive the diplomas and the academic degrees from Monmouth College. It is, I assure you, a day of victory for fathers and mothers as well as for young men and women.

And what is this thing we call "education"? What do you graduates have which you lacked 4 years ago? What values do you attach to your diplomas and your degrees?

Many regard this education as something which may now be cashed in the market place. To them the economic values of education stand out. There is reason for that. I recall in my high-school days the recruiters for colleges used to prove by statistics how much greater the average income of the college graduate was than that of the high-school graduate, and that of the high-school graduate greater than the eighth-grade graduate. But the past decade has taught that the law of supply and demand works with education as with corn and copper. I have known of graduates and post graduates whose professional education found no market. If the ticker tape had carried quotations on the symbols "BA" and "BS" and "MA" and even "Ph. D" the last 10 years the lows recorded would have reflected a diminishing economic value for a college education.

While better times have resulted in better placement of graduates I think we must modify somewhat our conception of the money values of education. The rising level of general intelligence, the broader spread of high-school education, plus its distinct improvement in character, increase the supply of so-called educated persons. There is growing realization that compensation should be based on quality of service and not on the scarcity factor which is involved through possession of peculiar knowledge and skills. The economic value in education which rests on exploitation of the ignorant is not a wholesome measuring stick. In brief, the economic value of your education will depend increasingly on your putting it to worthy use and less on the mere possession of a degree or the secrets of a profession.

Others may find this value in education: That it introduces one to the fraternity of the intellectually elite. Appreciation of things intellectual is one of the real benefits of education. But sometimes there develops among educated persons a social exclusiveness amounting almost to class distinction. The Phi Beta Kappa key may open the door to the friendly company of the learned; or it may open the door on a group of intellectual snobs. Respect for learning and intelligence need not go the extreme of university Brahminism. Rather I commend to you the frank confession of St. Paul, who said:

"I am debtor both to the Greek and to the barbarian."

There is another conception of education which still has its following: The idea that the brains of youth are to be shaped through formative years to conform to set patterns of thought. It is true that as the twig is bent the tree is inclined; and some take advantage of that fact. I recall observing in the high Cascades, at just below timberline, groves of small hemlock where the trunk of each tree had a crook in it 3 or 4 feet above the ground. The explanation was simple. Some previous season the snowfall had been unusually heavy and the weight of the snow bent the tree whose trunk was not strong enough to stand alone. The twist thus sustained by the immature saplings is preserved in the trees with the crooks in their trunks. A parallel to that is the description of a certain scene given by Anne Morrow Lindbergh in Listen, the Wind:

"Here there were gray, scraggly trees, their tops all bent in one direction, like seaweed swept along in the current. But the trees would never bend back again. They were caught, held in that tortured shape forever."

So it is that constant pressures warp immature minds. I am confident, however, that you who graduate from this college do not go out intellectually stoop-shouldered like those mountain hemlocks. I am sure that your minds have not been bandaged to the hard board of fixed ideas until you have become mental flatheads. An education like that is devoid of value. The training to be encouraged is like that of the fir tree in a favorable environment, whose roots spread out in the firm soil of durable reality and whose shaft rises straight to the light of truth.

What then are the great values in education? It is true that you get a fund of knowledge; but if you think your education ends with this, you have only a storage-battery conception of education, and you may find yourself at age 38 or 46 out on the road with your storage battery run down.

I conceive the great value of education to be the stimulation of the mind, so that it can utilize creatively that fund of knowledge and the constant impact of experience. This 4 years of advanced work should have resulted in the unfolding of your mental powers, in their exercise like the muscles of the body until you have developed a capacity for action based on independent thinking. There are plenty of people who can pass examinations by giving answers to questions they have learned by rote. There are too few, even among college graduates, who can attack new and unique situations and resolve them into clear solutions. This so-called higher education has set you up above your fellows on a high rung of the ladder. But from now on you must do the climbing yourself. That means you must possess alertness, you must be mentally awake and active, or someone with fewer initial advantages but with greater energy and keener awareness will pass you in the competition of life.

The question you face now and each day of your lives is this: "Will I be a routine worker, a thresher of old straw, or will I be an affirmative worker, seeking to do each job better, to explore new trails of endeavor?"

The whole progress of the human race rests on those who do creative thinking, who by purposed experimentation or alertness in discovery develop new materials and new ideas which result in the elevation of the race. Countless are the benefactors of mankind, but few of their names live in history. Who first shaped moist clay and baked it in the sun and thus invented pottery? Who first agitated cream in a goatskin bottle and discovered golden globules of butter, or learned to season curds and make mellow and nutritious cheese? Who first pounded grain in the cup of a rock and introduced the art of grinding, and who learned the property of yeast for the baking of bread? Who first learned how to lay a rafter and thatch it with straw and thus emancipated man from the dark caves of the hills? Who first drew taut the bowstring and sped the arrow to stop the wild deer in his leap? Who had imagination when he saw rock melting in the fire to run the molten stream into a mold and thus first brought metals into use? Who introduced the rites of matrimony and lifted mating humans above the animal level? Who first prescribed a rule for his fellows and laid the foundation for law and orderly society? Who first caught the rhythm of language and revealed to man the melody and the beauty of poetry? The names of these adventurers are lost in oblivion or, like Prometheus, the fire giver, survive only in legend.

As a matter of fact, each fresh achievement is usually only a short step over the frontier line of past accomplishment. Columbus did not discover America alone. Sharing honors with him were his predecessors who had invented the compass and the rudder and shaped plank to keel to frame a vessel. St. Paul might have converted all the Roman Empire by radio and been spared shipwreck and imprisonment.

The laws of sound and of electricity were the same then as now. The radio did not come by a single discovery; it was the culmination of centuries of patient experimentation in widely divergent fields. Each link in the chain was essential to ultimate success.

The challenge comes to college graduates today to make their contribution to human welfare. The greatest need appears to lie not in the field of mechanical invention but in that of successful coordination of individuals and groups. New attitudes, perhaps new mechanisms, are needed to enable people to live together more happily. For over 10 years we have lived under fearful strains, both economic and political, which reveal the difficulty of groups to adjust their relations smoothly and promptly. What creative thinking can you do in this great field, or in other fields of human interest?

There is one other great value in education besides that of self-realization as to one's mental processes and powers. That is the influence of education in raising the level of culture. Society is governed not alone by laws enacted by parliaments and legislatures. Society is controlled by the complex body of customs and habits which make up what we call the mores of the people. The mores are the resultant of many forces—of tradition, of political and economic conditions, of the play of fresh ideas. They are not fixed but constantly changing, a fact which grandmothers are constantly reminding us of, as they recall an elder and more virtuous day. Sometimes the changes are slow, like the deliberate, crunching march of a glacier. Sometimes they are swift like the flow of a river.

For a long time we have had the notion that the level of culture was constantly rising. That idea no longer seems valid. Cultures decay and the decline may result in social collapse. It requires the continuous effort of individuals to sustain the quality of community mores, and here the contributions of education are most pronounced.

Changes in customs are determined by popular taste, and naturally we must look to educated persons to cultivate the highest standards. They must, in fact, set the canons of taste—in dress, in recreation and entertainment, in morals, in the arts, in business. The competition between the wholesome and the spurious, between the genuine and the gaudy, is never ceasing. Four years in college should have taught you graduates the ability to distinguish better values in the endless succession of choices which make up the stream of daily living. You have been checking "true" and "false" on your term tests for several years; now you must make similar responses to life's questions, and there is no professor to score you on your decisions. I do not mean to preach, but I cannot emphasize too strongly your obligation as persons of education to cultivate tastes which will mark you as strong, free, self-disciplined, sincere men and women. I am not speaking now of great decisions. As you read a novel you will instinctively take the side of the heroic and the noble. But great decisions, as the psychologist will tell you, are usually the normal sequence of small decisions. Rarely does a man have strength for great denials unless he has nourished his courage with firm decisions in the small matters that make up the daily round of living. Lao Tzu, the Chinese philosopher, has left us this proverb, rich in wisdom:

"A journey of a thousand miles begins with one step." Each choice you make fashions your taste and your character. That is why great decisions seem to come easy for those of great character. The final step merely follows the pattern of the first.

The social significance of all this is apparent. The mores are but the trend of popular reactions; hence the selection of the individual helps fix the social climate of the period. You may not think much of it as you buy a magazine or patronize a movie; but the aggregate of these choices is what reveals the temper of the time. I do not mean that you should be burdened with a tremendous sense of social responsibility as you select your dresses, your reading matter, and your wall decorations. I am hoping, though, that college has served to refine your tastes so that almost instinctively you make your preference for the beautiful, the useful, and the enduring and reject the vulgar, the tawdry, and the transitory. This is the way that education yields supreme value, in lifting society from mediocrity into a rich and fertile culture.

You recall in history how civilization has been marked by cycles. Genius seems to be periodic, flashing for a time and then expiring. There was the Periclean age in Athens, followed by centuries of reversion. Rome blossomed in the Augustan age and under some of the later emperors. Then followed the night of the Dark Ages, 800 years, until the dawn we call the Italian Renaissance. The sixteenth and seventeenth centuries saw fresh undertakings: geographical exploration, the Elizabethan age in literature. The late eighteenth century saw torches lit for liberty and democracy, at a time when political thinking was remarkably keen. For the last century we have had the machine age, of which American industrialism is an example.

Each of these periods was a cycle of intellectual ferment. The question now pressing is this: Has the last phase reached its climax? Are we at the point of mental exhaustion which precedes an era of disintegration, fast or slow? The late Oswald Spengler, pessimistic German philosopher, thought so, and predicted the decline of the West.

The present war seems to demonstrate that the culture we have known and respected has come to a final collapse. One statesman has said we have sat at the "death watch of western civilization." Even we in nations yet unscorched by the flames of war have been psychologically shell-shocked. What the fate of Europe may be we cannot now predict. But for America surely the genius of our people is not yet burned out. Our natural resources are still abundant. Our human resources are still strong in vitality; we cannot believe that a racial blend so young has exhausted itself so quickly.

In other words, we ought to look forward to a fresh flowering of the American genius. Perhaps the cycle of the machine may be superseded by a richer culture, one which employs the machine more wisely; which exalts higher values than goods; which rises above the economic and political snarls of today to planes with broader horizons. Surely we ought to aspire to such a culture. Among the leaders to plan and usher in that culture should be the graduates of our colleges and universities.

I began this address with a brief description of a statue, the Pioneer Mother. I shall close with a description of another work of sculpture, Lorado Taft's Fountain of Time which stands in the old Midway at the University of Chicago. You have heard tempus fugit—time flies. But Taft has a different conception of time. In the basin of his fountain stands a symbolic figure, Father Time, draped by a mantle which falls in sweeping folds. Across the pool of water is a bridge crowded with sculptured figures, emblematic of pressing multitudes who rise out of the waves, mount the arch, and descend again into the waters of mystery. In the procession are a variety of folk: the mother suckling her babe, the priest, the general on horseback, light-hearted girls, despairing and wretched men, the scholar, the laborer. The inscription is taken from the poet's line: "Time flies—ah, no; time stays—we go." And thus it is that the monolithic figure of Father Time waits aloof; and humanity passes on.

Let me make the application. Life, not time, is fluid. Life is not sharply segmented into generations. This human procession is continuous. It is a basket-weave of rich and poor, young and old, intelligent and ignorant, frivolous and serious. It is the impact of mind upon mind, the action and reaction of personalities in this endless stream which weave the design of the prevailing social pattern. You graduates are now part of that stream. Your contacts, your influences, your choices are molding the cast as you mount the arch for your moment of high destiny.

"Time stays—we go." The present pushes; the future beckons. The world of tomorrow lies in your hands.

Democratic Victory in November May Mean War for United States

EXTENSION OF REMARKS

OF

HON. LEWIS D. THILL

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 5, 1940

ADDRESS OF HON. HAROLD KNUTSON OF MINNESOTA

Mr. THILL. Mr. Speaker, our New Deal administration is rapidly going down the road of intervention which leads to war. Roosevelt, in his eagerness to take part in the war now raging in Europe, has swept aside the arms embargo, and through his spokesmen, Senators PEPPER and BYRNES, is urging this country to take still more active steps leading to involvement in war. Our colleague from Minnesota, the Honorable HAROLD KNUTSON, addressed a meeting in Ohio several months ago and indicated that a Democratic victory in November may mean war for the United States.

The following news article reports the opinion held by the gentleman from Minnesota, Congressman KNUTSON, the only remaining House Member who voted against American participation in war in 1917:

REPRESENTATIVE KNUTSON SAYS DEMOCRAT WIN MAY MEAN WAR FOR UNITED STATES—CONGRESSMAN RECALLS WILSON BATTLE CRY AT MEETING IN OHIO

HAMILTON, OHIO, November 27.—Democratic warnings against "changing horses in midsteam" were met here last night with the argument that the "Democratic donkey has been floundering in midstream for 7 long years, and the time has come to make a change."

Flouting the Democratic feeling that the administration should be continued after 1940 was Congressman HAROLD KNUTSON, of St. Cloud, Minn., speaker at the Women's Republican Club.

"I say," said Congressman KNUTSON, "that it is better to change to a horse that will head us back to our own bank rather than toward the other side, where we would inevitably become involved in foreign wars."

CITES PROMISES

Criticizing the administration for having abandoned its campaign declarations of 1932 and 1936, which were directed at maintaining American neutrality even to the point of refusing armaments to belligerents, Congressman KNUTSON reminded his listeners of the events of the Wilson administration. He referred to the "He kept us out of war" slogan used by Wilson in 1916.

"We all remember what happened then," Congressman KNUTSON went on. "Just a month and 2 days passed after Wilson's second inauguration before war was declared on Germany. Yes; Wilson kept us out of war until after the election, and history is very likely to repeat itself in 1940, if by chance the Democrats should triumph."

G. O. P., PARTY OF PEACE

"The Republican Party," he said, "is the party of peace," and to its administrations of the past he credited numerous peacetime internal improvements that have had lasting benefit to the public. "The Democrats," he went on, "are now referring to restoration of the prosperity of 1926—a Republican prosperity."

Democratic failure to restore either agricultural or labor prosperity during its 7 years in office were roundly criticized by the Minnesota Congessman. Ten million men are still looking for jobs, he said, while agricultural parity has foundered because the loss of foreign markets while our own "have been surrendered to foreign competition."

PROMISES BENEFITS

"A Republican victory next year," he said, "would promote recovery, assure America's staying out of the war, revise the national tax structure to aid in business recovery, curb unnecessary spending, repeal the dangerous discretionary authority of the President over the Nation's monetary system, amend the National Labor Relations Act, restore American markets to the American farmer and wage earner, and reject all experimental legislation not clearly helpful in promoting recovery."

Mr. KNUTSON averred that Republicans do not consider all acts of the Roosevelt administration bad. "Its difficulty is," he said, "that they will not admit their mistakes." Republicans in control would mean "elimination of the bad features and retention of the good," he said.

Aid to the Allies

EXTENSION OF REMARKS

OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 5, 1940

EDITORIAL FROM THE CHATTANOOGA TIMES

Mr. KEFAUVER. Mr. Speaker, under leave to extend my remarks, I wish to include an editorial from the Chattanooga Times of June 4, 1940.

This editorial expresses, I believe, the overwhelming sentiment of the American people. I think the Congress is running behind the sentiment of the people. Eventually, I believe Congress will act to give every possible aid, short of sending troops abroad, to the Allies. My fear is that we will not act soon enough.

As pointed out in the editorial, "The time to help the Allies is now, not 6 months or a year from now, when our aid may not be able to turn the tide."

A good strong declaration of our attitude toward the Allies plus sending them all planes and materials available, might now turn the tide. Later it might come too late.

Let us be realistic and squarely meet the issue.

The editorial follows:

[From the Chattanooga Times of June 4, 1940]

OLD PLANES FOR NEW

The proposal, reportedly made by Senator PEPPER, of Florida, that this country sell immediately to the Allies older war planes now in the service of the Army and the Navy is an ingenious one. The plan would be carried out along the line of the automobile trade-in; that is to say, the Army and the Navy would select some of their older war planes and trade them in to manufacturers to apply on the cost of new models coming out in the next few months. Because title to the planes would have passed to the manufacturers they would be free to sell the planes immediately.

Some critics of the proposal contend that if the planes in question are good enough to help the Allies they would be valuable to this country in the event of any emergency in the 12 to 18 months necessary to replace them. There are factors, however, which suggest that from the standpoint of defense, this country would in no way be weakened by such an arrangement. For instance, the Army Air Corps has more than 200 two-motor bombers which even now are being replaced as obsolescent. Spokesmen for the Allied high command have been quoted in the past few days as stating that 1 airplane sent to the Allies now will be worth more than 10 sent in 6 weeks, and worth more than 100 sent in 6 months.

The Army bombers now obsolescent will be even less serviceable 6 months from now. If delivered to the Allies now they can be used to excellent account. As a matter of fact, the theory which makes it possible for the Allies to obtain priority in new-plane deliveries is that American manufacturers not only have the advantage of increasing plant capacity for which the Allied Governments pay, but also the tremendously important opportunity to perfect later models on the basis of performance in battle conditions.

To argue that sale of the older planes might weaken this country in case of emergency is to overlook the fact that the policy of giving the allied governments priority in delivery of new planes could be changed the moment this Nation's interests required newer models. The present policy of the Government in respect of plane production and delivery is based on the reasonable assumption that twice the present plant capacity could in an emergency provide planes for the Army and the Navy more than twice as rapidly as existing plants can do the job.

Those factors overlook the Allies' immediate and urgent need of virtually anything that can fly. And the matter of trading in older planes for immediate sale to the Allies concerns policy in a political sense rather than policy in a defense sense; that is, the administration will doubtless be most concerned with the implications of such a policy in the field of international relations. Despite a technical showing that the neutrality laws had in no way been circumvented, the practical effect of such a step might fit in with the contention that the German Government is concerned not with our reasons for doing or not doing any specific thing, but with the effect of our actions.

The time to help the Allies is now, not 6 months or a year from now, when our aid may not be able to turn the tide. The fundamental question which must be answered has to do with whether

the American people are prepared to face the consequences of granting to the Allies the unstinted assistance they need. Once the people reveal to the Government in Washington that they are prepared to face the consequences, help to the Allies will no longer be a matter for debate, but a matter of national policy, boldly and generously executed.

Henry Ford and National-Defense Program

EXTENSION OF REMARKS

OF

HON. WILLIAM A. PITTENGER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 5, 1940

Mr. PITTENGER. Mr. Speaker, a few days ago Henry Ford made the statement that if the Government needed airplanes, he could manufacture 1,000 planes a day. He also said rather significantly that he did not want to be tied up with red tape at Washington if planes were to be produced in large quantities.

Among our industrial leaders, Henry Ford has no superiors. He made a patriotic offer to his Government, and if I am correctly advised, up to this time, that offer has not been accepted. It would appear to some of us laymen that steps should have been taken the same day the offer was made to put Mr. Ford to work.

We have had over 7 years of New Deal and "brain trusters," and foolish experiments. During all of this time the administration has been in control of our Government, has wasted its money, and has the full responsibility for present conditions. The lack of any adequate national defense is apparent to everyone in possession of the facts. In connection with a preparedness program, just as in its other policies, the New Deal has been a total failure.

It now has an opportunity to correct its mistakes and to start out with a constructive program which will give us airplanes, and adequate army, and the armament necessary for national defense. Let us hope that for one time, at least, the New Deal will quit playing politics and act with some degree of patriotism and with some degree of consideration for the American people. I, for one, would like to know why this offer of Henry Ford has not been translated into action.

Let me say to the New Deal dreamers in fairyland that other people throughout the country are asking the same question. I call attention to an editorial in the Virginia Daily Enterprise, of Virginia, Minn., for Saturday, June 1, 1940. This is one of the leading newspapers in the district I represent, and its editor is Burt D. Pearson, who comments as follows in connection with the offer made by Henry Ford:

If the Washington politicians are really interested in getting the most for the money, in improving the Nation's defense facilities, they will let the industrialists of the United States have something to say about rearmament plans. Henry Ford says he can turn out a thousand airplanes daily, providing the politicians leave him and his factories alone. "If it becomes necessary," he declared, "the Ford Motor Co. could—with the counsel of men like Lindbergh and Rickenbacker, under our own supervision, and without the meddling by Government agencies—swing into the production of a thousand airplanes of standard design a day." No one doubts Mr. Ford's ability to do just this.

Why Congressmen Are Elected Every 2 Years

EXTENSION OF REMARKS

OF

HON. BUTLER B. HARE

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 31, 1940

Mr. HARE. Mr. Speaker, there is a feeling and some agitation throughout the country that Members of Congress should be elected to serve a 4-year term instead of 2. Personally and selfishly such a change might be looked upon with favor by some few Members of Congress, but when we review the debates and deliberations of those who framed our Constitution, and see why the term was placed at 2 years at the beginning, we cannot help but feel a 2-year term was and is still a wise provision.

The framers of the Constitution planned, of course, to create a Federal Government and convert the then 13 States into a more perfect union. There was no difference of opinion in that it was to be a Government expressly limited both as to its purpose and powers, and that the powers were to come from the States and the people and that such powers as were not specifically delegated were to be retained by the several States and the people. But there was some difference of opinion as to the extent of the powers to be delegated the new Government, and there was much deliberation as to what the relative rights and powers of the individual States making up the United States would be. The smaller States had a feeling that if the several States were to be represented in the Federal Government according to size or population it would be only a short time before they would have little or no influence in the new legislative body. A lot of time was consumed in discussing this one matter before reaching a satisfactory solution.

It was finally decided that the legislative body would be a Congress to be made up of two bodies—the Senate and House of Representatives. It takes the two to make the Congress, and all Members, therefore, are Congressmen, whether they be Senators or Members of the House of Representatives. However, it was not many years following the ratification of the Constitution until only Members of the House of Representatives were referred to as Congressmen.

In planning the powers and functions of the new Government, it was understood, as we have already suggested, that the several States should have someone to represent them and to see that their rights and powers were protected, and not completely absorbed by the Federal Government. Following a long discussion, it was decided the States should have two Senators each, regardless of size or population, and it was provided that they should be elected for a term of 6 years by the legislatures of the various States, it being made clear that the primary duty of the Senators was to look after and protect the rights and powers of the States. However, upon the adoption of the seventeenth amendment to the Constitution, it was provided that the Senators be elected by the people.

It was next planned and agreed that the people of the various States should have a separate representation in the Congress, and that such representation should be in proportion to population, and that the representatives should constitute the membership of the House of Representatives. It was emphasized in this connection that in order for the Congress to be fully advised of the wishes of the people at all times, the term of office of the Representatives should be much shorter than that of the Senators. Thomas Jefferson, the founder of the Democratic Party, believed the 2-year term for Representatives to be the strongest protection the people have in our scheme of government; that is, the right to express themselves every 2 years as to who shall be their Representatives in Congress. It was his idea that in this way Members of Congress would always be fresh from the people, and would, therefore, know the wishes of the people at all times. He had the further conviction that Members of Congress should, in the meantime, assist in keeping the people of their districts fully advised of the leading national problems in order that they might be able to give an intelligent expression of their views every 2 years. In replying to Alexander Hamilton's criticism, when he said:

The people will never be able to select capable and competent men to represent them in Congress.

Jefferson said:

Teach the people and trust the people.

It was his idea that the public should always be advised of public questions, and it is interesting to note that Congress as a body has always been mindful of this obligation.

Not infrequently legislation is proposed where Members of the Congress are quite familiar with the provisions of the proposal and, insofar as they are personally concerned, there is no real necessity for discussion or debate. However, in order that the people throughout the Nation may be equally well advised through the record, press reports, and distribution of such discussion by Members to their constituents full debate and discussions are generally permitted. A fair illustration of the point I am trying to make arose in the House of Representatives a few days ago when the chairman of the Military Affairs Committee reported H. R. 9850, a bill to strengthen our national defense—a bill in which the people of this country are vitally interested and have a right to be fully informed as to its provisions—said:

> There is no controversy in this bill whatsoever. After we had heard all the evidence and gone into executive session and considered it thoroughly section by section, even line by line, the bill is presented now with a unanimous report.

This was all true. However, the minority leader rose and suggested:

> The gentleman thinks, of course, it is necessary to have adequate debate so that the people of the country will understand the bill and the situation as to our national defense.

The chairman replied by saying there would be sufficient discussion or debate in order to advise the public fully in the matter. The debate followed and lasted an entire day. The discussions covered approximately 40 pages of printed matter, and when the vote was taken only 1 out of 435 Members voted against the bill. I make this reference to show that the primary purpose of extended debate and discussion is often to fully advise the people of the facts pertaining to the legislation, because this is not only a Government for the people, but it is a Government by the people, and in order for them to be able to function properly at all times they should have opportunity to be fully informed.

Mr. Speaker, these are not mere gratuitous statements or observations because I am firmly convinced that our democracy, about which we hear so much recently, cannot survive without an honest, fearless, and informed discharge of their duties by both the people and their representatives in Congress. A democracy cannot run itself. No government by the people ever survived any extended period of civic indifference. Good governments are not accidents. The same is true of bad governments. They are good or bad in proportion to the performance of their duties and functions by the people and their representatives, neither of whom will be able to long shift their responsibilities to the other. That great statesman and historian, George Bancroft, emphasized this point much better than I can when he said:

> The public happiness is the true object of legislation and can be secured only by the masses of mankind themselves when awakened to a knowledge and care of their own interest.

With these conceptions of a Congressman's obligation to his constituents in mind, it has been my policy to avail myself of opportunities from time to time to discuss the leading questions before Congress and distribute these discussions throughout my district in order that the people may know whether I am representing their interests or expressing their views on these matters. At the same time I am able by this practice to obtain their reaction and can better know how to represent them, because ours is a representative form of government. In an effort to follow such a policy I have distributed to as many of my constituents as circumstances would permit my views on the following matters: Our reciprocal trade-agreement policy with foreign nations; our old-age-assistance plan; the Conciliation Service in the Department of Labor; the farm-tenantry problem; parity payments for agriculture; the use of W. P. A. labor for the construction of public buildings to accommodate post offices and so forth; the National Youth Administration; power development as provided for in the Clarks Hill Dam project; the antilynching bill, and so forth. Of course, it is impossible to distribute copies of all debates to all constituents, but I trust it may be possible to continue the policy described as long as I am in Congress.

If there is an increased agitation of the subject within the next 10 years as there has been in the last decade we believe the question of whether Congressmen shall be elected for a 4-year term instead a 2-year term will be submitted to the people for a decision within that time, and I have, therefore, asked for this time to make my contribution to the discussions which may follow.

Highway Officials Offer Services in Emergency

EXTENSION OF REMARKS

OF

HON. WILBURN CARTWRIGHT

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 5, 1940

TELEGRAM FROM AMERICAN ASSOCIATION OF STATE HIGHWAY OFFICIALS

Mr. CARTWRIGHT. Mr. Speaker, I ask unanimous consent to have printed in the RECORD a telegram from the president of the American Association of State Highway Officials to the President of the United States tendering the full services and facilities of the State highway departments in the present emergency.

There being no objection, the telegram was ordered to be printed in the RECORD, as follows:

CHICAGO, ILL., *June 3, 1940.*

HON. WILBURN CARTWRIGHT,
House Office Building, Washington, D. C.:

The following telegram has been sent to the President:

"FRANKLIN D. ROOSEVELT,
"President of the United States, the White House, Washington, D. C.:

"The American Association of State Highway Officials hereby tenders the full services and facilities of its membership for any service we can render in any capacity, and on any undertaking in the present emergency. The State highway departments have highly trained technical and mechanical staffs located in each of the 48 States. We have available large quantities of construction and maintenance equipment. Following the precedent established in 1917 and 1918, we again offer our services.

"HENRY F. CABELL, *President.*"

By order of the executive committee.

T'hell With Europe Club

EXTENSION OF REMARKS

OF

HON. LEWIS D. THILL

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 5, 1940

ARTICLE BY EUGENE WARNER

Mr. THILL. Mr. Speaker, I heartily agree with the purpose behind the organization of a club which desires to keep our country from being involved in another European mess. I do feel, however, that after the war in Europe is over America can offer tremendous assistance in rehabilitating the war-torn countries and in relieving the distress, want, and suffering occasioned by war.

American boys now lie in Flanders' Fields, which have again been soaked with the blood of Europe's youth. Over 20 years ago we fought on European battlefields "to make the world safe for democracy," but shortly after the armistice was

signed Americans realized that we were hoodwinked by Europeans.

The following news article indicates that certain correspondents covering the American Peace Commission in 1919 became disgusted with the way the French and British were hoodwinking Woodrow Wilson, and these correspondents then formed a "T'hell With Europe Club," which has now been revived.

REVIVED CLUB DEMANDS UNITED STATES SHUN EUROPE—UNIT FORMED ABROAD IN 1919 "REINCARNATED"

(By Eugene Warner)

Scene 1: The Crillon Hotel in Paris in 1919.

Scene 2: The Carlton Hotel in Washington in 1939.

Dramatis Personae: (Scene 1), Samuel G. "Sam" Blythe, a dashing young correspondent; Jay Jerome Williams, the kid reporter at the peace conference; many another famed newsman. (Scene 2), Blythe, now a noted author and political analyst; Williams, now a syndicate head, still a boy at heart, but a little heavy for juvenile roles, and Commissioner George Henry Payne, of the Federal Communications Commission.

"T'HELL WITH EUROPE"

"In 1919 the correspondents covering the American Peace Commission became disgusted with the way the French and British were hoodwinking Woodrow Wilson," Williams said yesterday. "Over the aperitifs one afternoon Blythe proposed forming a "T'hell With Europe Club,' which was noisily seconded and then and there became organized."

Yesterday Blythe and Williams, with their friend Payne, decided to revive the club, with Blythe as president and Williams as secretary-treasurer.

In his rededicatory remarks, Blythe said:

"In those dark days in 1919, when earnest Americans thought it was possible to effect an enduring peace in Europe, there were some of us who were a trifle suspicious of it all.

SO, CLUB IS REVIVED

"Came the time when Woodrow Wilson saw his nethermost garments taken by Messrs. Lloyd George and Clemenceau and the realities of the situation came home to us. Spontaneously the T'hell With Europe Club came into existence.

"It is being revived. Its sole purpose is to keep our country from being involved in another European mess."

Suggested Relocation of British and French Capitals

EXTENSION OF REMARKS

OF

HON. ERNEST LUNDEEN

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Wednesday, June 5 (legislative day of Tuesday, May 28), 1940

ARTICLE FROM WASHINGTON TIMES-HERALD

Mr. LUNDEEN. Mr. President, I call the attention of the Senate and of the country to a curious article appearing in the Washington Times-Herald of today by Drew Pearson and Robert S. Allen. This article relates to efforts by the President seeking to restrain Italy from entering the war on the side of the Nazis.

TRANS-ATLANTIC TELEPHONE COMMITMENTS

Are we to understand that the President of the United States is acting for and in behalf of Great Britain and France? Why all this excitement, and trans-Atlantic telephone commitments?

Are we to have the British Empire dumped upon our doorsteps—the bloody English Empire with all its troubles? What business of ours is it if France rules her Empire from Europe or Africa?

INTERNATIONAL MEDDLING

What business of the United States is it whether Italy goes Nazi or Ally? How does this feeble international meddling square with the sturdy Farewell Address of the Father of our Country? How can you square such Europeanism with the foreign policy of Madison and Monroe, Jefferson and Jackson, and every great American statesman from that day to this?

BRITISH "SEVENTH COLUMN"

Is there a British "seventh column" operating in the United States? Since when did we surrender our American independence to European intrigue? I say to Senators and my fellow citizens, it is time to return to Washington, Jefferson, and Jackson Americanism.

LET THE AMERICAN PEOPLE BE FOREWARNED

Mr. President, if this information be true, let the American people be forewarned. These writers are supposed to be close to the White House. I feel that the Senate and Senate committees should endeavor to learn the sources of these rumors, and, if true, decide what action should be taken in the interest of the United States.

I ask unanimous consent that the article be printed in the RECORD for the information of the Senate and the country.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From Washington Times-Herald of June 5, 1940]

DUCE'S PEACE TERMS TOO HIGH, PRESIDENT LEARNS BY TELEPHONE—CHIEF EXECUTIVE URGES ALLIES TO MOVE CAPITALS AND BRING WAR FLEETS HERE

(By Drew Pearson and Robert S. Allen)

For more than 10 days the most significant peace discussions in which President Roosevelt has yet engaged have been taking place with Premier Mussolini in an effort to stop the carnage in Europe.

At least one of these conversations took place directly between the two men by trans-Atlantic telephone. The chief purpose behind them, from Roosevelt's point of view, was to keep Italy out of the war. He believes Italy's entry would be crushing to the Allies.

WANTED BENEFITS FOR NOT FIGHTING

The conversations reached a point where Il Duce promised the President that he would keep Italy out of the war if the United States would step in and see that a peace was worked out which gave something to Italy.

For several days the discussions continued, but broke down last Friday. It was the next day, Saturday, that Nazi raiders bombed the cities of Marseille and Lyon in southern France—a gesture of support to Italy. Some observers believe that the Nazi planes actually flew from Italy.

DUCE ASKED SIX FRENCH DEPARTMENTS

The rock upon which the Roosevelt-Mussolini discussions foundered was the actual peace terms. Il Duce wanted six French departments (provinces) on the Franco-Italian border, including the famous resort towns of Cannes and Nice, also Tunis and some other French colonies in Africa. He also proposed that the southern or pro-French part of Belgium be given to France to compensate for her lost provinces, the rest of Belgium being combined with Holland under Germany.

Finally, Mussolini wanted the Maginot Line blown up and leveled off.

During all of these discussions, Germany did not come into the picture. However, it was suspected that Mussolini was in touch with his axis ally.

When Roosevelt put these ideas up to France, he got no encouragement whatsoever. The French have been willing to give Italy various African colonies, but they balk flat-footedly at ceding the French side of the Alps. Such a cession would mean that Italy would control both slopes of the Alps, thus wiping out their value as a natural barrier, and leaving France open to attack at any time in the future.

Also the demolition of the Maginot line would leave France equally exposed on the west from Germany. Thus placed in a vise between two powerful neighbors, France would virtually cease to be an independent nation.

Roosevelt had several discussions with Ambassador Bullitt regarding this, also with Ambassador Kennedy in London. Both felt that the original energy of the German drive had been spent and that from now on the Allies could hold their own, particularly if they got airplanes, tanks, and guns from the United States.

Ambassador Bullitt also felt that although Italy might come in, her troops would not be able to cross the Alps and Mussolini was not worth buying off.

PRESIDENT CALLS TWO ENVOYS

These views were not entirely shared in Washington. In fact the President was most pessimistic. He had his last conversation with Mussolini on Friday, May 31. After that Mussolini refused to see Ambassador Phillips further. On the same day Bullitt called upon Premier Reynaud, while Roosevelt summoned the French and British Ambassadors.

The President was so convinced that Italy was coming into the war and so pessimistic regarding the consequences that he advised the British to set up a new capital in Canada, bringing the fleet to western Atlantic waters, and suggested that the French establish a capital in Africa. He also told the French that their fleet would find a safe haven and receive the cooperation of the United States in American waters.

Let Us Perfect Our Labor Legislation—Retaining and Not Destroying It

EXTENSION OF REMARKS

OF

HON. JOHN R. MURDOCK

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 5, 1940

Mr. MURDOCK of Arizona. Mr. Speaker, it seems that much of our time this session is taken up with amendatory legislation pertaining to the wage-hour law and the Wagner Labor Relations Act. A very large part of my correspondence pertains to the proposed amendments to one or the other of these laws. Some laborers make the extreme demand that no amendments be made to either act. Other labor organizations insist on some perfecting amendments, but not too many so as to endanger the essential legislation. Many employers have insisted that amendment, and drastic amendment, of each act is imperative.

What is a reasonable attitude and course of action in regard to such legislation? Although not a union man, I am, and always have been friendly to labor. I recognize human values above dollar values, and wish to see the greatest good to the greatest number, in economics and industry as well as politically and socially. On the other hand, I recognize the interdependency of employers and employees and the basic economic need of fostering private employment to the greatest possible extent with a minimum of labor controversy. Although the Wagner Labor Relations Act was placed on the statute books before I became a Member of Congress, I recognize that it is almost as new as the wage-hour law; and because both are in the experimental stage, it stands to reason that both contain imperfections which ought to be remedied. I favor remedying such imperfections. This work is one of degree; that is, it should go as far as necessary, but not to the extent of emasculating either act.

It may be that many of our constituents do not understand that all legislation here at Washington is a result of compromise. No man can have his entire way about anything—not even the President, and I think his way is usually right. All during my very first session in Congress—the long-drawn-out session of 1937—I felt at that time we should not leave Washington in the autumn of that year until we had enacted suitable farm legislation and proper wage legislation. I so stated to many of my colleagues during that long, hot summer through which we sweltered in our offices that were not air-conditioned.

Why was I interested in wage and hour legislation? Because sweatshop conditions prevailed in parts of our country and because the rank and file of our people looked to the administration to keep a promise and take a necessary humanitarian step to better conditions. Of course, I knew that the need for such legislation was greater in the East and in the South—far greater than in the Rocky Mountain area. Of course, I knew that wages paid in the mining camps of Arizona were far above any minimum which we were apt to set by law. And, of course, I knew that in the small, isolated mining communities there was not much unemployment, and therefore no need of shortening hours in order to put more men to work.

It is extremely difficult to write a law providing uniformity in hours and wages in this great and diverse country of ours in which conditions differ so extremely. At the risk of offending, or possibly misleading, some elements of labor in my own State I worked diligently to get certain mining operations exempt from the proposed wage-hour law. I not only tried to get them exempt but, in cooperation with other western Congressmen, we actually got a considerable element of labor in mines exempted from the bill which was before the House in the special session of 1937. However, that was the act which was recommitted, and when finally revived it was in entirely different form. Therefore, I say to employers and employees alike in the mining communities of my State—the same is true of agriculture labor—that we westerners have done the very best possible to shape this necessary and wholesome legislation so as to do the most good with the least hurt to the peculiar labor situation prevailing in our part of the West.

With a change in war conditions, it may be that labor must expect some restrictive adjustment, which necessary adjustment labor will no doubt accept in a patriotic spirit for national defense.

Our great leader, President Roosevelt, has announced that he wishes a policy of national defense to be set in motion at once with determination and vigor, without the loss of our social gains or without relaxation of our humanitarian efforts. Accordingly, I believe that we should by all means retain the floor under wages, but may in certain lines of industry relax the hour requirements. In regard to the Wagner Labor Relations Act, while I favor a consideration of the proposed amendments, I fear the score or more amendments offered by the Smith committee would go too far, and I think two or three amendments, such as increasing the personnel of the Board, would be sufficient at this time. I do not look upon this proposed amendment, such as increasing the Board, as appeasement, but as a logical step in enabling this Board to carry on its weighty and highly important function.

The Air Program and National Defense

EXTENSION OF REMARKS

OF

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Thursday, June 6 (legislative day of Tuesday, May 28), 1940

LETTER FROM THOMAS D. COOPER AND ARTICLE FROM THE UNITED STATES NEWS

Mr. REYNOLDS. Mr. President, I ask unanimous consent to have published in the Appendix of the CONGRESSIONAL RECORD a letter addressed to me under date of May 28, 1940, by Hon. Thomas D. Cooper, of Burlington, N. C., in particular reference to our national defense, together with a reprint of an article from the United States News, issue of May 31, 1940, entitled "The Truth About Our Neglected Air Program."

Mr. Cooper is a prominent attorney of North Carolina, a World War veteran, and a member of the American Legion, and is intensely interested in our defense program.

There being no objection, the letter and article were ordered to be printed in the RECORD, as follows:

BURLINGTON, N. C., *May 28, 1940.*

Hon. R. R. REYNOLDS,
United States Senator, Washington, D. C.

DEAR BOB: I hand you herewith a reprint of an amazing article appearing in the United States News issue of this week. To me, the article fairly rings with truth and, at my own expense, I am causing it to be distributed to a limited number of my friends and to persons in positions of influence and authority. Further, I have requested this news magazine to distribute copies to each American Legion Post in the United States.

It is my hope that the voice of the Legion may be raised in demand for sure, definite, and immediate armaments adequate for national defense, and especially for a separate air force superior in number and equipment to any the world now knows or any nation has planned. That the cost is not to be considered, either in dollars or in the heads of opposing Army and Navy officers, is conclusively proved by recent events abroad. In the President's "fireside chat" on Sunday evening he used the terms "unity of action" and "the air forces should be part of the Army and Navy." The construction to be placed upon those terms or the distinction to be drawn is all important. To be sure, there must be coordinated action, but it should be made certain that our air force be no longer subordinated to the Army and Navy. Its effectiveness being supreme, its development should be paramount. Those of us who were subjected in World War I to machine-gun strafing from the wobbly crates of that period can best understand from afar the devastating effect of the offense by air in Europe today. Take notice, too, that the

man who directs the entire military operations of Germany is the air-minded man, Goering.

We of World War I are not jittery, and we need no more babbling exhortation against panic impulses. Neither shall we be ostriches with our heads under the sand. Are we to contemplate ironically that our own genius invented the airplane and that our own air-minded prophet insisted upon its development as a potent weapon of future wars? Or shall we insist quite firmly that a 19-year-old mistake be corrected now and at once.

With assurances of high esteem,

Very truly yours,

THOMAS D. COOPER.

[From the United States News of May 31, 1940]

THE TRUTH ABOUT OUR NEGLECTED AIR PROGRAM—HOW INERTIA IN THE HIGH COMMAND HAS KEPT US WEAK IN AVIATION—GENERAL MITCHELL'S PLEA FOR AIRCRAFT POWER IGNORED HERE, HEEDED IN GERMANY

President Roosevelt suddenly is demanding 50,000 war planes. Congress, with equal suddenness, wants to vote unanimously for them. Mr. Roosevelt says those planes can start rolling into production at 1,200 a month or 14,400 a year, and Henry Morgenthau, Treasury Secretary and spark plug of airplane building, talks confidently of early war-plane production of 1,600 a month, or 19,200 a year.

From the White House, from offices of Cabinet members, from Congressmen come statements that all is well, that the airplane situation is well in hand, that this country has missed no bets and is a great air power. There are frequent assurances that the United States itself is amply supplied with modern fighting planes adequate for all defense and that the only problem is to turn out fighting equipment for sale to Britain and France.

THE FACTS ABOUT OUR AIR POWER

But what really is the truth? How well did responsible officials of the Government look to its air defenses? How alert were the commanders of this Nation's armed forces to the meaning of what happened in Poland and later in Norway? What is there to show that high American officials with access to all information coming from fighting fronts all over the world in recent years really learned anything from that information and acted upon it?

The bare facts today, from official sources, are these: The United States Army possesses 2,794 planes, of which 800 are combat planes and fairly modern design, but lacking armor and armament equal to that of German planes. The Army hopes soon to be receiving 40 planes a month of a type that could stand against the best of Europe. Germany today is turning out 3,300 first-line planes each month and intends soon to step up production to 6,000.

Senators were shocked to learn from Rear Admiral John H. Towers, Chief of the Bureau of Naval Aeronautics, that of the Navy's 3,363 planes only 1,367 are adequate for battle and that only 734 more are ordered. Delivery on the new planes cannot be expected before July 1941.

Present monthly production of war planes of all kinds in the United States—training, pursuit, bombing, etc.—is about 450, of which all but a few are going to Europe. The hope is that production can be increased to 800 a month, or 7,200 a year, by next January. References by high officials to much higher production totals are not supported by Army and Navy officials who know actual deliveries. Those references probably are to potential production of airplane bodies, if all aircraft companies start to build war craft. They are not to the planes that will be delivered in months just ahead to Maj. Gen. H. H. Arnold, Chief of the Army Air Corps.

Actually, the United States is far behind in the air race. It cannot now make substantial progress in that race for many months, fateful months for the world. Only a short time ago Congress was tripping up this country in its race by throwing out requested appropriations for war planes, in order to increase subsidies to farmers. Present excitement and demand for action are unable to make up for lost time.

These are facts from official sources. They emphasize the further fact that the United States failed completely to take advantage of the one military weapon that its own genius developed and that its own officers pioneered. Germany today is using the air tactics developed and urged upon this Government by American air officers, one of whom was court martialed for his trouble.

At this time there is no more revealing and no more amazing story than the story of Brig. Gen. William Mitchell and his futile attempt to convince the rulers of this Nation that the airplane could do what Germany now is proving it can do. General Mitchell commanded the air service of the First and Second Armies in the A. E. F. He comprehended the potentialities of the weapon he used.

Mitchell foresaw that the airplane could render obsolete the warship as then designed. When admirals laughed, Billy Mitchell took his case to the public. In June 1921 this Nation saw a dress rehearsal of what occurred in 1940 under war conditions off the coasts of Norway and England. With Members of Congress, foreign diplomats, and the entire American Fleet as witnesses, General Mitchell directed Army fliers who first bombed and sank a submarine, then a destroyer, then a cruiser, and then the German dreadnaught *Ostfriesland* that Admiral von Tirpitz had said was "unsinkable." This ship went down in 21 minutes.

Still the land and sea forces scoffed. Air forces were given the crumbs when money was divided up between the old-line services. Mitchell argued for a separate air force so it could get more attention from Congress and more funds for research and development. To prove and emphasize his point again, in 1923 he took out the battleships *New Jersey* and *Virginia* and sank them both with bombs.

This and the resulting controversy proved too much for the generals and admirals. In 1925 President Coolidge did not send up General Mitchell's name for reappointment. The general reverted to a colonel's commission. When, later, the airship *Shenandoah* crashed, Mitchell issued a bitter statement attacking the high officers of this country's armed services for giving Congress misinformation and for miserly treatment of aviation. He was arrested, court martialed, convicted, and suspended from the service for 5 years, a penalty that President Coolidge approved.

From then on Congress went ahead appropriating billions for battleships and diminishing millions for aircraft. Since 1921 this country has spent more than $9,000,000,000 on its Navy, of which less than $200,000,000 went for aircraft. In 1939, out of a Navy appropriation of $635,000,000, the outlay on aircraft was $24,000,000. In that same year, out of an Army appropriation of above $500,000,000, the amount spent on aircraft was $39,000,000 and for air research $3,500,000.

President Roosevelt went along with the big-battleship advocates, accepting the story that a bomb couldn't sink a warship, or, if it could, it wouldn't, because the battleship would destroy the aircraft first. Mitchell's contention was that "the only defense against air power is air power." He insisted future aircraft would mount cannon and eventually would have not only 1-pounders but cannon up to 6-inch caliber. He argued that the airplane would revolutionize warfare.

HOW GERMANY PROFITED

While the generals and admirals directing this Nation's armed services went on their way scoffing, the generals and admirals in Germany took "Billy" Mitchell's lessons and advice to heart. They studied his methods and his tactics. Today the world sees Germany on the verge of dominating Europe, while the United States is scrambling to find a way to deliver to its Army more than 40 airplanes a month that can mount the cannon that German aircraft carry and that Mitchell foresaw. General Mitchell died in 1936 and did not live to see another power demonstrate the correctness of his appraisals.

General Arnold, present head of the Army's Air Corps, had agreed with Mitchell, and in 1926 was reprimanded by the General Staff for too energetic espousal of the cause of aircraft. The general had started to fly in 1911 as one of the early pupils of the Wrights, and ever since has kept in the forefront of air development. But in the Army, as in the Navy, the Air Corps received what was left over after the remainder of the service was taken care of. The men who got ahead were those who, even if disagreeing, did not kick up too much fuss.

What really is back of America's lack of preparedness in the air at this critical time?

The answer is given by officers who know, but who, for obvious reasons, cannot permit their names to be used. That answer is covered by the one word "inertia."

In other words, in both the Army and the Navy, the ranking generals and ranking admirals—according to testimony of service officers who are acquainted with the facts—didn't know anything about airplanes and didn't want to learn, because it involved effort and a readjustment of ideas and of plans that had been developed through their years of service. The story was told of one officer in charge of an American Army who could shoe a horse and cure a horse of almost any ailment, but who was bewildered by the thought of an automobile engine and who didn't like and didn't trust any kind of machine from a radio to an automobile. Yet today's Army must be an Army of machines and of more machines, from motorcycles and tanks to trucks and airplanes.

Officers in both the Army and Navy will tell a trusted inquirer that the reports from junior officers, who know modern warfare and who know the meaning and use of war machinery, seldom are acted upon by the commanding officials of the services. It took the actual destruction of warships under battle conditions before the American Navy or the British Navy would learn the lesson that Billy Mitchell tried to teach 19 years ago. Right now the fate of an empire may turn upon that refusal by admirals to learn a lesson. Already American taxpayers are likely to be out several billions of dollars for a similar refusal.

Asked why the Navy had stood against important change in battleship design through all of the years, an important and informed officer said:

"It's because the battleship boys are more intolerant of new ideas than the devotees of the horse. The fact that there is more freedom of expression in the Army enabled some progress toward mechanization, while in the Navy the air force had more difficulty selling its ideas."

The basic trouble? As the officers of the Army and Navy air services see it, the trouble in this country lies in the way funds are budgeted.

An over-all appropriation is determined for each service, and then the funds are divided up among the branches of that service, not necessarily according to defense need, but sometimes on the basis of influence of commanding officers. The air force, as a new arm

of each service, has less voice and less influence in the distribution of funds.

In Germany the old-line army officers had to give way to younger men, and younger men, in turn, were forced to think of new ways to prepare for war and to fight a war. The new ways—which in reality represented a return to the lessons that Jeb Stuart and Bedford Forrest taught in their cavalry operations in the Civil War—caught the older generals and admirals of Britain and France off guard.

Officers in the American services, under the top ranks, argue that it is just America's luck that Germany tried out her modern methods on some other armies and navies than those of this country.

The truth happens to be, on the basis of available information, that the United States today is woefully unprepared in the air and has refused to heed the advice of its own prophets. Whether there now will be a change remains to be seen.

Broadcasting Bunk

EXTENSION OF REMARKS

OF

HON. HOMER T. BONE

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Thursday, June 6 (legislative day of Tuesday, May 28), 1940

ARTICLE BY FRANK C. WALDROP

Mr. BONE. Mr. President, I have noted from the news stories appearing in the past few days that there seems to be great confusion in the public mind about the status of the law relating to the use of radio facilities by the candidates of various parties. In view of the conflicting opinions, I admit that I myself have a great deal of misunderstanding as to exactly what the rule is or should be. In view of the uncertainties which now confront us it seems quite possible that some legislative changes which would appeal to the judgment of Congress might well be adopted if the confusion continues.

I noticed the other day that the Senator from New York [Mr. MEAD] put into the RECORD a statement reflecting the viewpoint of one of the radio chains, which seemed to be somewhat uncertain as to what position they should take with respect to a broadcast by Earl Browder, of the Communist Party. The very able chairman of the Committee on Interstate Commerce, the Senator from Montana [Mr. WHEELER], when the matter was brought to his attention, expressed the opinion that the Communications Act should be amended so that no broadcaster would be compelled to give time to the candidates of any political party if it is proven to be subservient to a foreign party. He further indicated that he believed that the Communications Act should be changed so as either to relieve a broadcasting station of liability for libelous political utterances or to permit it to censor them, and that the law was written so that each candidate for public office should have the right to express his views whether we agree with him or not, adding that which would be obvious, coming from the Senator from Montana, that he had no sympathy whatever with or tolerance for the attitude and the views of the Communist Party.

I am rather inclined to believe that some clarification is needed in the interest of both the industry and the listening public; and if legislation is indicated as a necessity, I am of the opinion that it should be presented to Congress at some opportune time, in order that the Senate and Congress generally may pass judgment on the matter.

Indicative of the uncertainty which now exists, I read the other day an article by Mr. Frank Waldrop in which he expresses a somewhat opposite viewpoint to that expressed in the statement put into the RECORD by the Senator from New York [Mr. MEAD]. I do not know where the logic lies in this situation; but in view of the fact that Mr. Waldrop has made this comment, and that it does present another aspect of this matter which will challenge our attention, particularly in a campaign year, when feeling will run high, I ask, merely for the sake of information and for whatever it may be worth from the viewpoint of Senators who have a feeling one way or the other, that the article by Mr. Waldrop appear in the Appendix. Therefore, I am tendering it for that purpose.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BROADCASTING BUNK

(By Frank C. Waldrop)

The National Broadcasting Co. and Columbia Broadcasting System have just got smoothly away with one of the most extraordinary performances in their careers.

On Sunday afternoon last they each broadcast the Presidential nominating convention of the Communist Party, and in the evening Columbia let the nominee, Earl Browder, gobble to a Nationwide audience his notions on world affairs.

The excuse the broadcasters gave for this reckless stunt was that they were forced by Federal law and the Federal Communications Commission to perform for Browder, whether they wanted to or not.

That just plainly isn't so. Not true. False.

The incident has served very well to blacken the public name of the Communications Commission and the communications law, which, while it doubtless was a great surprise to the broadcasters, no less pleased them. Why the Commission doesn't fight back is a mystery. Its sins, in fact, are so many, however, that it probably hasn't any energy left to defend itself against sins in fancy.

But that is no excuse for two great national broadcasting networks to disseminate Communist propaganda willfully and with something aforethought, just in order to snipe at the F. C. C.

Again—they didn't have to give Browder 2 minutes' time, nor did they have to put the Communist convention on the air at all. Of course, if they felt they should let him talk in the interest of free speech that is a matter of conscience. But that they were compelled in law—get a copy of the Communications Act of 1934, turn to page 30, and read section 315. It states:

If any licensee (broadcasting station operator) shall permit any person who is a legally qualified candidate for any public office to use a broadcasting station, he shall afford equal opportunity to all other such candidates for that office in the use of such broadcasting station, and the (Communications) Commission shall make rules and regulations to convey this provision into effect: *Provided* That such licensee shall have no power of censorship over matter broadcast under the provisions of this section.

No obligation is hereby imposed upon any licensee to allow use of its station by any such candidate.

Doesn't that make the facts plain?

Was the convention of the Communist Party in New York City on Sunday last a legally qualified candidate for any public office?

It was not.

After the convention met and nominated a candidate, he then became a legally qualified candidate in the few States of the Union in which the Communist Party has legally qualified itself to contest for an election.

Was any broadcasting network obligated to distribute Candidate Browder's speech from New York City to the four corners of this Nation?

It was not.

The networks have no obligation to send any political program anywhere, anytime. They can give their time away or sell it, as they choose.

Poor Norman Thomas, who was nominated in the Willard Hotel here by the Socialists as a legally qualified candidate for President, with the right to contest for the election in the few States wherein the Socialist Party is qualified legally to do so, was the only official candidate for the Presidency running, up to Sunday.

After being nominated, Browder had the right to go to stations which had broadcast any speech of Thomas, provided such stations were located in States wherein the Communist Party is duly and legally qualified to contest for the Presidential office, and demand equal facilities to those given Brother Thomas.

He would also have the right hereafter to demand from stations in those States the same equality of treatment they may show any other legally qualified candidate for President.

But did the stations have to give Thomas free time? Did they have to give Browder free time? Do they have to give any candidate for public office free time?

They did not and do not. The law says so plainly.

Giving free time to candidates for public office is the broadcasters' legalized device for keeping in good with the politicians. It serves them both well—then and later—in many ways.

All of which is as it may be. They, too, have to get along in this world. But it isn't decent of them to let Browder do something he had no legal right to demand and then tell the American people they were bound to let him under the law and the rules of the Communications Commission.

The Commission ought to stand up for itself on this point. Here's one, anyhow, it could win.

Land Bank Commissioner Loans

EXTENSION OF REMARKS
OF
HON. REID F. MURRAY
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 5, 1940

Mr. MURRAY. Mr. Speaker, the following table shows the commissioner loans, held by the Federal Farm Mortgage Corporation, which have been made each year from 1934, the time of their inception, to 1939:

Amount of land bank commissioner loans made by States during fiscal years from 1934 to 1939

District and State	1934	1935	1936	1937	1938	1939
District 1:						
Maine	$2,146,100	$1,563,300	$817,600	$281,900	$168,500	$76,500
N. Hampshire	323,000	280,200	168,800	80,300	70,300	79,900
Vermont	882,900	493,600	237,300	153,100	112,600	102,800
Massachusetts	1,693,000	1,242,900	689,700	659,300	393,900	274,200
Rhode Island	172,800	142,200	121,700	152,200	90,500	72,100
Connecticut	980,900	917,200	578,200	459,100	343,800	340,600
New York	5,092,500	5,278,500	2,227,000	1,599,400	1,012,100	948,700
New Jersey	1,808,400	1,725,900	699,500	611,500	468,000	381,400
Total	13,099,600	11,643,800	5,539,800	3,996,800	2,659,700	2,276,200
District 2:						
Pennsylvania	5,207,800	2,963,300	837,600	572,200	355,000	299,200
Delaware	306,400	174,500	48,800	32,500	30,300	15,900

Grand total	380,629,751	368,359,126	119,535,395	52,445,608	33,392,245	27,947,259

Farm Credit Administration, Division of Finance and Accounts.

On March 31, 1940, 185,207 of the commissioner loans were first-mortgage loans, representing a value of $250,025,708, and 250,280 were second-mortgage loans, representing a total of $427,691,226, making a total of 445,487 commissioner loans, with a value of $677,716,934.

The figures in the foregoing table indicate that the making of new commissioner loans has practically ceased. While, in 1934, $380,629,751 was loaned, in 1939 only $27,947,259 was loaned. Nearly all the 1939 loans were loans on farms held by the Government and very few were original loans. This is evidence that the whole farm-loan program of the New Deal has bogged down and is approaching the condition in which it was in earlier years.

The second-mortgage commissioner loans were largely a junior mortgage to Federal land-bank loans and were made on the basis of 75 percent of the normal agricultural value of the farm. The first-mortgage commissioner loans were, in part, well secured.

At the present time many of the commissioner loans are delinquent. Even Southern States, which have had subsidies of up to 30 percent of their assessed valuation, show a very high percentage of delinquencies. In South Carolina 35 percent are delinquent. In Mississippi 48 percent are delinquent.

THE CAUSES

There are two principal reasons why there is such a high percentage of delinquencies of these loans. One is that the loans were rather generously made and in good faith. Little did anyone expect to see the shrinking not in farm values but in the selling price of the farms in many parts of our country. Land is the basis of wealth, and a consistent long-term farm-loan policy should be inaugurated that will give stability to the agriculture of the Nation.

New farmers, set up with 40-year loans at 3 percent interest, as promoted by the Bankhead-Jones bill, has not made collections of commissioner loans any more easily effected as the commissioner loans are, in most cases, for 10 to 13 years at 4 percent interest.

Taking the country as a whole, the total number of Federal farm mortgages is 1,062,815 loans of $2,478,050,246—Federal land bank, 617,328 loans, value $1,800,432,312, and commissioner loans of 445,487 loans, value $677,617,934. This is less than the subsidy to agriculture the past 7 years, though, of course, much of this subsidy money never found its way to the pockets of the real farm people of this country. There are approximately 6,800,000 farms in the United States with an estimated total farm-mortgage debt of seven to eight billion dollars.

The second reason for the high percentage of delinquencies is that agricultural products bring only about 75 percent of parity. If these loans were made when cheese averaged from 14 to 17 cents per pound, how can we expect to collect them with the 12.6- to 13.2-cent cheese we have under the New Deal. We must increase the price of farm products, lower the farmer's cost of production by reducing his taxes and his overhead, or lower his standard of living.

On December 31, 1932, there were 500,537 Federal farm loans, and of these 45 percent were delinquent. On December 31, 1939, there were 617,328 Federal land-bank loans, and 22 percent of them were delinquent. On March 31, 1940, there were 445,487 commissioner loans, and 29 percent of the loans were delinquent. In some districts over 50 percent of the Federal loans were delinquent.

The farmers of this country need and deserve a farm-loan policy which will not only have continuation of a fair rate of interest but also a permanent and definite long-term policy, so that the borrower will know exactly what his rate of interest will be and can plan accordingly. Too many changes and too many "emergencies" do not make for a constructive land-loan policy.

Rich, productive land has been a necessity for any great nation of the world, and it ever will be. Real soil has always made and always will make a great nation. Let us have as the first requisite a permanent loan policy. We should not continue a policy of 40-year loans at 3-percent interest, furnishing 100 percent of the purchase price to one class of borrowers under the Bankhead-Jones bill, charge another class of borrowers 4 percent interest on 10- to 13-year loans, with the loan based on 75 percent of the normal value, as in the commissioner loans, and then charge another class of borrowers 3½ percent interest on loans representing 50 percent of the value of the farms as in the Federal land-bank loans. These agencies must be coordinated with equal rights extended to each group. Any other program is unjust and unfair and is not in keeping with a program of the greatest good for the greatest number, the objective of every republic.

With all this talk and political propaganda in regard to the lower interest rate to farmers, it is only fair to remind you that on July 12, 1937, the President vetoed the provision for a 3½-percent interest rate for Federal land-bank loans and the 4-percent interest rate on commissioner loans.

On June 15, 1938, this "veto to extend for 2 additional years the 3½-percent interest rate on certain Federal land-bank loans and to provide a 4-percent interest rate on land bank commissioner loans until July 1, 1940." Congress extended these rates over his veto.

The subsidies to agriculture the past 7 years would have paid off all the Federal farm loans, but these subsidies went in large sums to others than actual farm people.

Over 84,000 farm mortgages were foreclosed during the New Deal years. The average loan of less than $2,500, saw the driving of 84,000 farmers from their homes and their method of making a living at a time when the New Deal was appropriating millions of dollars to build dwelling units costing up to $5,600 for their city cousins who did not pay down 1 cent on the home. In addition the Federal Treasury is called upon for an annual subsidy of $28,000,000 for 60 years to carry on this city housing and the New Deal is now trying to get an additional subsidy of $45,000,000 for 60 years to further this program.

The farmers of this country are entitled to wages and hours accorded other groups, and they are not going to be continually satisfied with meager subsidy checks of $50 or less per farm per year average when farm products bring but 75 percent of parity and cause them hundreds of dollars loss per farm per year, average.

Twelve-cent cheese, 10-cent cotton, 5-cent hogs mean 10 cents or less per hour for the farmers of this country. A long-term, fair-interest-rate, farm-loan policy minus so many "emergencies," would be a welcomed program for the rural people of America.

Memorial Day Exercises at Antietam Battlefield

EXTENSION OF REMARKS

OF

HON. WILLIAM D. BYRON

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 6, 1940

ADDRESS OF JOSEPH A. CANTREL

Mr. BYRON. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following address of Mr. Joseph A. Cantrel at the Memorial Day exercises, Antietam Battlefield, Sharpsburg, Md., on May 30, 1940:

MEMORIAL DAY ADDRESS OF JOSEPH A. CANTREL AT ANTIETAM BATTLEFIELD, SHARPSBURG, MD., MAY 30

Another year has gone by; another page of history has turned since last we met here to commemorate Memorial Day at this sacred spot, around the open bier of our Nation's heroes, to revere the memory of our soldier dead.

The high-sounding words and phrases then expressed, well-intentioned and well-meant, were soon forgotten, as mine shall also be before tomorrow's dawn. But should they gain root for but a fleeting hour to loose a thought upon which to meditate, my mission here will be fulfilled and my happiness complete.

Twenty-two years ago I observed Memorial Day close to the scenes which are recalled today, just as did many of the myriads of our splendid American youths who enlisted in the armed forces of our country in the World War. And, while I was not one of the scores who were cited for exceptional bravery, nor one of the many who bore the ugly wounds of conflict, yet I served close to the thousands who went to return no more.

The major portion of my service in the World War was in conjunction with the British Expeditionary Forces in northern France and Belgium, in a sector commonly known as Flanders Fields. It was my good fortune to have known and served there under Col. Franklin d'Olier, the founder of the American Legion, born to keep forever fresh the memories of our soldier dead. It was my privilege to have known and enjoyed, too, the friendship of Col. John McCrae, doctor and poet, patriot and hero, who died in January of 1918, at Wimereux, France, not far from the blood-red poppies which he so immortalized in his noble, challenging poem, and which he wrote on a page torn out of his dispatch book, in a tiny first-aid dressing station cut into the bank of the Ypres Canal, during a lull in the hottest phase of the second battle of Ypres. That poem was real, and so were the singing larks and the belching guns. Every Armistice Day there is a pilgrimage to his grave, just as there is on Memorial Day to this sacred spot of Antietam. There poppies from Flanders are scattered upon his grave, while a wounded English soldier reads the three verses of his immortal poem, inscribed on a plaque over his grave:

"In Flanders fields the poppies blow
Between the crosses, row on row,
That mark our place; and in the sky
The larks still bravely singing fly,
Scarce heard amid the guns below.

"We are the dead! Short days ago
We lived, felt dawn, saw sunset glow,
Loved, and were loved, and now we lie
In Flanders fields.

"Take up our quarrel with the foe;
To you from failing hands we throw
The torch. Be yours to hold it high!
If ye break faith with us who die
We shall not sleep, though poppies grow
In Flanders fields."

Oh, I wish you could but visualize with me, who has been over the ground there, the Ypres Canal in Belgium, with its exceedingly high hills and banks on either side. Colonel McCrae's dressing station was in a hole in the foot of one of the banks. During periods of the battle men who were shot actually rolled down the bank into his dressing station. A few hundred yards away were the headquarters of a regiment and many times during the 16-day battle they could be seen burying their dead whenever there was a lull. Thus, the crosses, row on row, soon grew into a good-sized cemetery; and, just as he describes it, we often heard in the mornings the larks singing high in the air, between the crack of the shells and the reports of the guns in the nearby batteries. The most gripping thing of all in his poem, however, are the abrupt and startling contrasts between joy and sorrow—life and death. The red poppies, symbols of sleep, and the hero dead, who will be sleepless unless the survivors remain faithful to the sacred cause for which they died.

Colonel McCrae is buried on rising ground above Wimereux, France, from where the cliffs of Dover, across the channel in England, are plainly visible on sunny days; he rests in historic ground upon which Napoleon's Grand Army was encamped. A short time before his death he was wheeled to the balcony of his hospital to have a final look across the channel to England. And as he gazed at the silver cliffs of Dover with evident delight he said quietly, and somewhat sadly, "Do you think those people over there know the hell the boys here are going through?" "I think so," replied the medical officer in attendance.

"Tell them this," he went on, "just tell them this," and here he quoted the terrible threat contained in his famous poem:

" 'If they break faith with us who die, we shall not sleep.'

"Tell them that, doctor, just tell them that." And a few days later he went forth to meet the eternal mystery. That was 22 years ago.

And today, as we look at the cap sheath of these memorials all about us, and at the ensign of our Republic, in spirit we see there not merely the marble sepulchres wherein lie the remains of those who made the supreme sacrifice, but we see the pallid, stark, white, pitiful, suffering faces of all of them in that shell hole cut in the canal bank at Ypres, awaiting the moment of the arrival of the messenger of death. If we listen quietly we can hear faintly, yet distinctly, their united voices coming down out of the atmosphere:

"We are the dead! Short days ago we lived, felt dawn, saw sunset glow. Loved, and were loved, and now we lie in Flanders fields."

And can't you hear them saying to you, fellow Marylanders, and men and women of America, "You are the living, you are privileged to be trained by men and women who have the loftiest concept of freedom, liberty, justice, and equality, and who, in consequence, teach you in the highest possible way; you are privileged to have before your eyes in the lives and memories of Maryland's noble and lion-hearted sons stirring examples of exalted character and of inspiring patriotism?

"You are the inheritors of grand traditions and you enjoy the rich legacy of unblemished lives and of golden deeds. You be true to the principles taught by our venerable American institutions, you stand as an impregnable force for the security and dignity of personal uprightness, you stand for the security of your home against the malign powers that are seeking to destroy it; you stand for the security of society against the piratic hordes that are toiling for its annihilation, and you stand for justice; you stand for individual liberty under the law, and you stand for the triumph of right over might."

And can't you even hear them whispering down to all of us here assembled: "Fellow Marylanders, do you think the men and women of our Nation now know the hell we went through for the preservation of these principles?" And as each of us quietly, yet subconsciously respond, "Yes, I think they do"—we can plainly hear the challenge they fairly hurl at us when they shriek:

"IF YE BREAK FAITH WITH US WHO DIE, WE SHALL NOT SLEEP"

And I know I speak the sentiment of all of us here in answering back to them: "Go back to sleep, heroic men, we shall keep faith with you. We'll take up the torch that you did throw, and we shall ever hold it high," and

"Sleep on ye brave and fallen dead
Dear as the blood ye gave
No impious footstep here shall tread
The herbage of thy grave

"Nor shall your story be forgot
While time her record keeps
And glory guards this honored spot
Where valor proudly sleeps."

Two-Party System Necessary to Our Form of Government

EXTENSION OF REMARKS

OF

HON. CHARLES A. HALLECK

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 6, 1940

ADDRESS OF HON. JOHN HAMILTON

Mr. HALLECK. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following address of Chairman John Hamilton, of the Republican National Committee, before the Italian Republican League, Waterbury, Conn., on June 5, 1940:

I am delighted to have this opportunity of addressing the Italian-Republican League, for in our veins runs the blood not of one nationality but of many nationalities. The greatest thing we have in common lies in the fact that all of our forbears, whether they came on the *Mayflower* or during that great period of immigration in the nineteenth century, or even later, came here with the hope of finding a promised land wherein they could be free men leading a life without being subjected to the anguish and bloodshed that has wrecked Europe for untold centuries.

They came here desiring to be free men in the fullest sense of the word. Having found that which they sought, our people have always tried to avoid conflicts with others, for we are hospitable people who are in no sense militant. Yet in the past when we have seen our freedom jeopardized we have fought—and bitterly—to maintain it even though it has been against our blood brothers in Europe. Out of it all we have become a great Nation—indeed we are a United States.

But those things which we possess that are worth the while have not only been established and preserved by force of arms, they have come into being through a form of representative government designed to bring to all a good life.

Tonight I say to you, advisedly, that as we take inventory we can no more afford to overlook the situation at home than abroad. It is of that on which I desire to speak.

Shortly after the middle of September I returned from Europe. Since the declaration of war I had heard little news from this country. Landing at New York I was surprised to have reporters ask me if the Republican Party would continue as an instrument of politics—whether I thought it might be possible that the Republican Party would support Mr. Roosevelt as a candidate for the third term, and finally what did I think of the proposals for a coalition.

I said that I believed the two-party system was necessary to our form of government. I stated that this system was as firmly grounded in our conception of government as though it was written into the Constitution itself. Furthermore, I said that if but one leadership or one party were left in the field to do as he or it saw fit, without check or curb, we should have lost the representative system of government and replaced it by one-man rule—call it what you will.

As the months went by and we became more accustomed to the thought of a Europe at war, we regained our composure and took a more normal attitude towards politics and government. In the 3 or 4 months preceding the first week of May of this year there were many elections, and particularly elections to fill vacancies in the National House of Representatives. The Republican Party lost none of these byelections and in practically each of them the Republican majorities were increased over the elections of 1938. In other words, the people reaffirmed their belief in the two-party system—they echoed by their ballots their belief in a strong opposition party and they forecasted Republican success in the national election of 1940.

Suddenly in the early part of May the mechanized forces of the German Reich undertook the invasion of Belgium and Holland. They swept over the Low Countries, beating back the French and British to the Somme and to the channel. As the effectiveness of the German war machine became apparent—as peace-loving people were crushed ruthlessly beneath its onrushing power, and as we saw those governments which are more nearly like ours than any others threatened with defeat and possible extinction, our national sympathies were not only aroused to a greater extent than before, but we took inventory at home to ascertain our own ability to defend our interests, particularly in the Americas.

These perfectly normal reactions were unfortunately accompanied by subtle and insidious suggestions made for purely political reasons. As in the fall of 1939, the wheels of political propaganda began to turn. Men who were more interested in using our pressing problems as springboards for their personal ambitions than in solving instant questions sought to stir up our people with thoughts and suggestions which would lay the groundwork for the destruction of the Republican Party. Once again we heard the same questions as in September.

Would it not be well, they said, to postpone our national convention? Why not accept the President as the candidate of both parties? Again there were those who suggested that we should have a coalition, and even some who went so far as to advocate the indefinite postponement of the 1940 election.

Many who in their anxiety joined in these suggestions did not see the implications of such a movement.

They did not realize that to follow such a course would be to bring about here that form of government that has created chaos in Europe. They did not sense that it was the most insidious kind of politics that dictated the thoughts of those who were attempting to sow such seeds. They did not realize that to follow these suggestions would destroy the only check upon the present administration and would leave it, or, more aptly, its leader, accountable to none, not even the people for whose benefit this Government is supposed to exist.

But, fortunately, there were men of foresight who immediately perceived the consequences of such a course. Nonpartisan publications and able and intelligent writers realized the inherent dangers

involved, and these dangers were brought forcibly to the attention of the American people. Within our own ranks there were men who appreciated both the reasons and the possible results of such tactics and they spoke their minds instantly and forcibly. We may be glad of the action taken in that regard by our Members in Congress, our Governors, and by such leaders in the party as Governor Landon and Herbert Hoover. Because of the position which these men have taken—by reason of the reaction of our party members and the public as a whole—I am able to say tonight as the chairman of the Republican National Committee that our party will continue as a vigorous and effective force in the body politic of this country, and that in preparation for the leadership which it will soon assume and in carrying out its present obligation as the minority party, its leaders will voice their honest opinion on the questions of the day.

This they will do despite the whining of those who hope to hide their failures of the past—their shortcomings with regard to their present tasks—under the cloak that any criticism is unpatriotic. If honest criticism cannot be made of this administration—if the Republican leadership is not at liberty to advise as to the future conduct of our affairs—if that leadership is not free to protest a course which they believe is not for the country's best interests—then the cause has already been lost. Lost not through the invasion of our land by hostile troops but by our giving up the greatest gift of democracy, the freedom of speech.

Many of those who would do away with our normal political activities because of the present emergency seemingly desire to apply this elimination of politics by continuing Mr. Roosevelt in the office of the Presidency.

They blandly refer to the old adage that one should not change horses in midstream. But this emergency or stream to which they refer arises primarily from the present European situation. Admittedly our stream is not as swift nor our emergency as acute as that which confronts the British and the French. But they had no qualms in violating old adages, for they not only saw fit to change their government in midstream, but when that stream was turned into a torrent by reason of the present German invasion, they also removed the active commanders of their armed forces.

They recognized that the test of the right of anyone to remain in the public service lies in his continued usefulness to the state.

It is a fair test and one that we may well apply to our present situation. I believe that we in America, faced by no such dangers as confront the British and the French, cannot have become so lacking in balance—so dependent upon a single man or a single group of men—that we will continue to entrust our future to those who have proven themselves unfitted to run the affairs of this Nation simply that we may comply with an age-old adage. If adages are to be the order of the day, let me suggest one—when a horse flounders in midstream it is better to abandon him even though one has to swim to shore.

It is in the belief it is my right as an American citizen to speak frankly and that it is my duty as a member of the Republican Party to do so, that I approach the question with which our people are most concerned today. I refer, of course, to the defense program which is now pending before the Congress and which will be uppermost in our minds for many months to come.

It is with a great deal of gratification I am able to say to you tonight that not only in this period of emergency but throughout the last 7 years the Republican leadership in and out of the Congress has supported the defense program of the administration, and today it is fully aware of the seriousness of the problems that face us. The Republican leadership recognizes the urgent need of carrying out in the most efficient and economical manner and at the utmost speed an adequate program for defense. But it has expressed the conviction that such a program can only be carried on through the establishment of the highest degree of cooperation between industrial management and labor and government. We are fully satisfied that both industry and labor are ready to play their part in such an endeavor, but we believe also that it is essential for government, and the leaders of government, to give the inspiration and the leadership if such an endeavor is to be at all effective.

If there is one requisite of such leadership in times like the present it is utter frankness with the public. Indeed, unless the public is fully informed of our present situation, we may not obtain the cooperation which we all seek.

It may be embarrassing to the President that, after having warned the country for at least 3 years of the imminence of a Eureopean war, and after having spent $7,000,000,000 on armaments during his term of office, that it should suddenly develop, through the testimony of the ranking officers of the Army and Navy, that we are pitifully unprepared, particularly in those mechanized instruments through which war is now waged. It would have been better for the country to have been apprised of these facts through a candid admission on the part of the President himself.

It was not in the interest of frankness for the President, in his last fireside chat, to summarize the condition of our national defense by referring to aircraft, antiaircraft guns, tanks, and other modern weapons of war by bulking in his report not only those weapons which are on hand but those which in his own words are "on order." Honesty required that the distinction between weapons available for use and those on order should have been clearly made. Weapons which are "on order" will not defend the United States of America any more than those which are "on order" here for the Allied Governments were able to come to the aid of those troops who were sacrificed in Flanders Field.

Immediately following the outbreak of the war the President appointed the War Resources Board, made up of eminent leaders of both industry and labor. Substantially 2 months later that Board made a report to the President of its findings in connection not only with the state of preparedness of this country but as to such steps as it deemed necessary to establish an effective approach to the question of national defense.

Time after time the Republican leaders in the House and Senate have asked that this report be made public, but the President has not seen fit to let the Nation have the benefit of the findings of the Board. Inasmuch as more than 6 months have elapsed since the filing of this report, it would be interesting to know whether or not it may not have contained proposals and suggestions which would have been helpful at the time the report was made. The spirit of frankness of which I speak would have been aided materially had that report been made public, and the errors of the administration, if any, admitted.

It was unfortunate that the President saw fit to inject into his fireside chat the question of partisan politics. This he did when he attempted to compare the present status of our armed forces under his administration with the 7 years preceding 1933. The President knows full well that the two periods are not comparable. In the 7 years preceding 1933 the world was still attempting to carry out a program of disarmament instituted under a Republican President in 1922 a program which was wholeheartedly endorsed by the Democrats in their platform of 1932, and which by their action was made a nonpartisan question.

There was during that period no foreign policy evident among the nations of Europe which would threaten to embroil the world in war. Indeed, there was no condition in the world which allows that period to be compared with the 7 years of the Roosevelt administration. As late as January 3, 1936, Mr. Roosevelt boasted, "We have sought with earnestness in every possible way to limit world armaments and to obtain the peaceful solution of disputes among all nations." If Mr. Roosevelt could say that after the developments since 1933 in Europe, how can he possibly, in good faith, charge against Republican administrations having adopted a similar attitude prior to 1933?

There is one more point that I would like to make in this connection, and that has to do with Mr. Roosevelt's implications, indeed his direct statements, that the Republican Party was not alive to the question of needed armaments when it was in power, and that under its last administration the Army and the Navy were allowed to sink to a low ebb. This charge cannot be made in reason, and surely not in good faith, for in the Democratic platform of 1932 the Republican administration was openly condemned because of the amount of money which it was spending on the armed forces of this country. I call your attention to the words of that platform. It reads as follows:

"We advocate a Navy, an Army adequate for national defense, based upon a survey of all facts affecting existing establishments, that the people in time of peace may not be burdened by an expenditure fast approaching a billion dollars annually."

That was a direct condemnation of the expenditures of the Republican administration. That was the platform on which Mr. Roosevelt said he stood 100 percent. How, then, can he face the people of this country and state that the Republican Party was derelict in its obligations as to national defense?

There is in this country a demand that partisan politics, insofar as any matter is concerned which affects the security of this Nation, should be laid aside. The Republican Party has strictly adhered to such a course, and it has the right to expect that much at least from the present administration. It has the right to believe that no group in office or out will attempt to achieve behind a screen of a program of national defense political advantages which they have not been able to achieve under other circumstances. If it is necessary to have coordination in industry and labor as the most effective means of bringing their facilities into mesh for the good of the country, obviously we must have political coordination to the same end.

To that coordination the Republican Party is pledged by every word of its leadership and by its record in the past.

To that coordination it will stand pledged in the future. It only asks that it retain the right of constructive criticism to bring the facts before the people of this Nation so that they may judge the situation as it is, but, above all, that the President of the United States shall not seek to cover up the deficiencies of his administration through partisan politics at its worst.

When at the outset the President indicated that he would carry out the defense program through the present agencies of the Government, and particularly under the direction of Mr. Morgenthau, Mr. Ickes, and Mr. Hopkins, the Republican leadership protested vigorously against such a course on his part.

That protest was echoed by the country, for there were none who had any doubt but that the men whom the President had mentioned were totally lacking in any qualifications for the tasks to which he proposed to assign them. Why were they not qualified?

One had spent his entire life as a social worker until he was put into the department of government having charge of commerce and business, another was a gentleman farmer before he was placed in charge of the country's finances.

The third was a Chicago lawyer and professional reformer. None of these, as far as the record shows, has ever had any practical experience in industry or business. So Mr. Roosevelt was forced to abandon the idea of letting these men carry out the program and told the country he was going to set up an Advisory Commission to take charge of producing the war munitions our country needs so badly.

But again Republicans pointed out that Mr. Roosevelt had only gone half of the way, that advisory commissions led to futile discussion and confusion, whereas the present situation calls for action. So again Mr. Roosevelt was forced to retreat by the very weight of the evidence against him, and I, for one, am very happy to learn today that Mr. Roosevelt proposes to give some real authority to two of the industrialists that he has called into the governmental service.

My one hope is that these men will be permitted to do the job without intermeddling on the part of those who have already proven their inefficiency in the last 7 years.

It is quite all right for the President to set up a board or group of men to make for efficiency in the carrying out of the rearmament program of this country, but after all this Board is not free from the laws of the United States, nor is it free from the effects of those laws upon both industry and labor. So that it seems to me we might well ask the President if further steps are not to be taken which will render the work of the Board more effective.

In this connection would it not, Mr. President, aid the very program which you advocate if you were to request of the Congress amendments to the Securities Exchange Act which would make it easier to obtain capital for the expansion of those industries which are to be called upon to manufacture and produce much of the needed arms and munitions?

Do you not believe that you should take notice of the hearings which were held in connection with the investigation of the National Labor Relations Board, and move promptly by legislation or otherwise to see that that Board is so constituted that it will be an agency, not for the advancement of the interests of any single labor group, but for all labor and for employers as well?

Inasmuch as your program looks toward the establishment of an air force second to none, would it not be well to revoke your recent order placing the Civil Aeronautics Authority under a political agency and let it operate as it did in the past, free from political interference and for the best interests of an industry which is now so vital?

Finally, do you not think that you would gain a greater cooperation from industry as a whole if those men in your Cabinet who, time after time, have attacked the business of this country were replaced by men in whom business and the public would have confidence, and who by their past experience have proven themselves fitted to carry out the greatly accentuated responsibilities of the moment?

These suggestions are not offered in the spirit of criticism of that which has gone on before. These suggestions are made with the thought that the errors of the past may be corrected and utilized to avoid similar errors in the future.

Memorial Day Address

EXTENSION OF REMARKS
OF
HON. WILLIAM D. BYRON
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 6, 1940

ADDRESS BY HON. LEWIS COMPTON, ASSISTANT SECRETARY OF THE NAVY

Mr. BYRON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of the Honorable Lewis Compton, Assistant Secretary of the Navy, at Antietam Battlefield, May 30, 1940:

My fellow Legionnaires, distinguished guests, and residents of Washington County, 1 year ago today I had the honor and privilege of participating in the Memorial Day services of the Moriss-Frock Post of the American Legion at Hagerstown. When Congressman BYRON told me that your post had been designated to conduct the services here today at historic Antietam, and had extended an invitation to me to be with you again, I welcomed the opportunity.

Here on this field, 78 years ago, American manhood rose to a pinnacle of heroism never surpassed in all history. The names of the gallant dead of both armies are indelibly inscribed upon the imperishable and glorious pages of the history of this Nation.

The observance of Memorial Day this year, above all other years, has a greater significance than ever before. We thank Almighty God that our beloved country is at peace in a world gone mad—aflame with undeclared war and frightful invasion of peace-loving neutral nations. There is in progress today in Europe a battle, which may be the greatest in all history, the results of which may well change the destiny of the entire world.

No one can foresee what the immediate future may bring. In these ominous days war clouds gather with astonishing rapidity. Our country must be strong, for the weak have perished. One year ago today I spoke to you on the topic The Navy Builds for Peace. That is as true today as it was 12 months ago. In fact, within the past several weeks, the Congress has enabled the Navy to see its way clear to step up its building program and quickly increase its degree of preparedness to an extent not realized for years.

Let none misunderstand this salient point: The Navy builds for peace. We covet no other country, but, if others covet us, the strength of our Navy is the basic deterrent to any contemplated invasion of our shores.

The United States of America must be ready if and when it is challenged. We can be ready if we will, but time is of the essence.

Our Navy, now, as always, is our first line of defense. It must be fully prepared immediately an emergency arises. It must be strong enough and large enough to defeat any enemy or any possible combination of enemies, who may seek to dominate our shores.

You all know that during the decade preceding 1933 our Navy was permitted to fall to such an estate that instead of being the largest in the world it was a poor fourth in under-aged fighting ships. Great Britain had 138; Japan, 184; France, 124; and the United States only 101. Almost immediately upon taking office President Roosevelt initiated action, and the Congress appropriated funds, for increasing the United States Navy, to the end that this Nation might once again have a navy second to none.

Since 1933, 130 naval vessels, both combatant and auxiliary, have been placed in commission in the United Staes Navy. Sixty-six additional are actually on the building ways, and, in addition, the Naval appropriation bill for the next fiscal year is expected to provide for the commencement of 24 additional vessels, making a total—projected, building, and in commission—of 220 vessels.

While the war clouds darkened the skies and since the storm of war has come with all its fury, the Navy Department has exerted every possible effort to speed up its shipbuilding program. At the present time ships are being completed as far as 6 and 8 months in advance of the specified contract time. This represents superhuman effort, not only on the part of the Navy, but also on the part of industry and labor, to whom the thanks of all our people are due.

But it is never enough that only certain component parts of this great democracy function alertly for preparedness and peace. Today we will all agree that the past few weeks in Europe have been a frightful example of the present-day tragedy of faith in altruistic treaties and the dreadful cost of unpreparedness.

To my mind the hour has struck when Americans must knit the sinews of national military and naval strength with our commercial, labor, industrial, and social life in a manifest determination that our democracy shall survive the world chaos and the period of adjustment that must follow. To do this there can be no weak links in our American chain of strength. Our only hope is singleness of purpose and unity of effort. Without this practical idealism we are appallingly vulnerable to a coalition attack—attack from within as well as from without.

Never before in our history did "united we stand, divided we fall" mean as much as it does today to citizens of the United States of America.

Make no mistake, our fleet is ready. The Secretary of the Navy, the Honorable Charles Edison, has but recently returned from an inspection of the United States Fleet in the Pacific Ocean, and witnessed the maneuvers off the Hawaiian Islands. During that time Mr. Edison was aboard six different types of fighting ships, from which he observed the fleet problem. He reported that the performance of these vessels, the smartness and precision of their crews, indicated clearly to him that the confidence of the American people in our Navy is fully justified. I can assure you

that, ship for ship and man for man, our Navy is the equal to, if not the superior of, any navy in the world. Our new ships and our aircraft are of the very best, and there has been no let-down in our high standards of personnel and training.

However, we have neither enough ships nor planes nor men to meet the threats that are looming. The Congress has just enacted emergency legislation to provide additional funds for the Navy. I can assure you that the Navy Department will scrupulously and frugally, but without delay, use the moneys provided to the end that every dollar of taxpayers' money will produce a dollar's worth of national security.

I know that here, on the fields of Antietam, it is not necessary to adjure you to keep the torch of patriotism burning brightly. By your very presence you rededicate yourselves to the ideals of your country and mine.

We who enjoy the freedom and liberty of democracy must unite in the common cause of preserving that freedom and liberty. A united America will forever preserve these heritages.
